have turns the IG Act on its head and is fundamentally inconsistent with the independence that is necessary for effective and credible oversight."

Horowitz takes note in his op-ed of an opinion made by Justice's Office of Legal Counsel that has caused an uproar on Capitol Hill. The July 20 opinion argued against the disclosure of certain records to IGs during their audits.

That sparked action by senators from both parties. They offered legislation last month to reverse the Justice opinion and give inspectors general access to all agency records (*E&E Daily*, Sept. 22).

The Justice IG said lawmakers should pass the bill.

"I urge Congress to pass legislation quickly that clarifies that 'all records' means 'all records' and reject any interpretation that would allow government agencies to shield their misdeeds from inspector general oversight and, more importantly, from the American people," Horowitz said.

Inspectors general haven't always seen eye to eye with the Obama administration. Forty-seven IGs complained of agencies blocking their investigations in an August 2014 letter to lawmakers (*Greenwire*, Aug. 6, 2014).

CAMPAIGN 2016:

Trump vows to cut EPA if he wins the White House

Daniel Bush, E&E reporter

Published: Monday, October 19, 2015

Real estate mogul Donald Trump vowed yesterday to eliminate U.S. EPA if he wins the White House next year.

The Republican presidential front-runner said he would cut several federal agencies including EPA and the Department of Education if he wins the 2016 election.

"Environmental protection, what they do is a disgrace. Every week they come out with new regulations," Trump said on "Fox News Sunday," referring to EPA.

When asked by the show's host Chris Wallace who would protect the environment if EPA no longer existed, Trump responded: "We'll be fine with the environment. We can leave a little bit, but you can't destroy businesses."

An EPA representative declined to respond, saying the agency does not comment on political campaigns.

Green groups slammed Trump for singling out EPA. Daniel Weiss, senior vice president for campaigns at the League of Conservation Voters, said Trump "essentially announced that he would launch an attack on public health if elected to the White House."

"His disdain for health and environmental standards would dirty our waters and foul our air, just to enrich big polluters at the expense of everyone else," Weiss wrote in an email.

While Trump hasn't called for eliminating EPA outright before, he has been highly critical of environmental regulations and climate change policy (*Greenwire*, July 24).

Trump said last year on Twitter that global warming was "bullshit" and also grabbed headlines in 2014 when he told the conservative news outlet *Breitbart News* that he believed "taxing everybody for climate change is ridiculous."

At the same time, Trump has long touted his environmental record, despite criticism from green groups over the environmental impacts of his real estate projects (*Greenwire*, Oct. 5).

Trump's latest comments echoed former Texas Gov. Rick Perry's now-famous slip-up at a 2011 GOP presidential primary debate, where Perry could remember only two of the three federal agencies he would cut if he became president.

Perry, who also ran for president this cycle before dropping out of the race earlier this year, said later that the agency he had forgotten was the Department of Energy.

COAL:

Murray agrees to $5K elections fine for 'war on coal' signs

Manuel Quiñones, E&E reporter

Published: Monday, October 19, 2015

Murray Energy Corp. has agreed to pay $5,000 to the Federal Election Commission for distributing signs opposing President Obama during the 2012 campaign, according to public records.

At issue are signs reading "STOP the WAR on COAL -- FIRE OBAMA." A Murray executive saw them in Ohio and Pennsylvania, and the company decided to make roughly 4,700 more at a cost of almost $22,000, according to FEC records.

The problem, according to the FEC and a complaint by left-leaning group ProgressOhio, is that the signs didn't contain a disclaimer showing who paid for them and whether any candidate committees approved them.

Murray Energy representatives say they didn't know the disclosure was necessary and described the signs as part of long-held company beliefs that Obama is waging a war on the coal industry.

Democratic and public watchdog groups have also complained that Murray was forcing employees to participate in company political activities. Murray has denied the allegations.

Earlier this year, the FEC decided against pursuing a complaint that Murray forced workers to attend a 2012 rally for Republican presidential candidate Mitt Romney (*E&E Daily*, July 29). The six-member bipartisan commission deadlocked on whether to proceed.

BLM:

Ex-directors make pitch for 'rigorous' venting, flaring rule

Phil Taylor, E&E reporter

Published: Monday, October 19, 2015

The Bureau of Land Management should require "significant cuts" to the amount of natural gas being flared on public and tribal lands and should require companies to detect and fix gas leaks, according to two former agency directors who served during the Clinton and Obama administrations.

The former directors, Mike Dombeck and Bob Abbey, sent a letter today to Office of Management and Budget Director Shaun Donovan asking that "prompt and timely consideration" be given to BLM's draft rule to reduce venting and flaring.

Dombeck was BLM's acting director from 1994 to 1996, and Abbey was director from 2009 to 2012.

"We believe a rigorous rule is critical for reducing methane waste (the primary component of natural gas) from oil and gas operations on America's public lands and of the federal mineral estate more broadly," the ex-officials wrote. "As stewards for the American taxpayer, the BLM has the authority and duty to ensure a fair return for publicly-owned oil and gas minerals under the Mineral Leasing Act of 1920."

The rule would be "both practical and cost effective" and could be modeled after regulations recently established in states including Colorado and Wyoming, the directors said.

BLM's rule should end the venting of associated gas from oil-producing wells; force "significant cuts" to natural gas flaring; require leak detection and repair at least four times annually at facilities on federal and tribal lands; and require best management practices that reduce waste at "all points of production," including at pneumatic controllers and pumps, liquids unloading, and storage tanks, Dombeck and Abbey wrote.

The directors are the latest to weigh in on the controversial BLM rule, which has been on the agency's regulatory agenda since the middle of Abbey's tenure.

BLM submitted the rule Sept. 18 to OMB's Office of Information and Regulatory Affairs for interagency review (*E&ENews PM*, Sept. 21).

The rule will update 35-year-old regulations that determine when gas is "avoidably" and "unavoidably" lost and whether it is subject to royalties. It will also determine what gas companies may use on-site free of charge to power their operations (*Greenwire*, Sept. 14).

Capturing more of the natural gas that is currently vented, flared or leaked to the environment could increase domestic production and yield a greater royalty return to the U.S. Treasury, while also reducing the escape of methane, a potent greenhouse gas.

But industry officials say an onerous BLM rule could make it too expensive to drill and produce on public lands, which would reduce energy production and overall revenue to U.S. taxpayers.

HYDRO:

Judges signal skepticism of FERC permitting decision

Robin Bravender, E&E reporter

Published: Monday, October 19, 2015

Federal judges today appeared skeptical of electricity regulators' decision to grant an initial permit for an Iowa hydroelectric project.

A three-judge panel for the U.S. Court of Appeals for the District of Columbia Circuit grilled a Federal Energy Regulatory Commission attorney this morning about why the commission granted a preliminary permit to a private company rather than a municipal power agency, when the law says municipalities and states are entitled to preferential treatment.

In the case, the Western Minnesota Municipal Power Agency is challenging FERC's decision to grant a preliminary permit to FFP Qualified Hydro 14 LLP in 2013 to study the feasibility of developing a hydroelectric project at the Army Corps of Engineers' Saylorville Dam on the Des Moines River in Polk County, Iowa.

FERC denied Western Minnesota Municipal Power Agency's competing permit application, and the Minnesota agency argues that FERC erred by departing from its long-standing practice of giving municipalities preference in awarding such permits.

Attorneys for FERC, meanwhile, have told the court that their agency acted appropriately, and that municipalities should be accorded preference in such permits only with respect to water resources that are located "in their vicinity." The commission "rejected Western Minnesota's claim to municipal preference because -- with headquarters almost 400 miles from the proposed project -- Western Minnesota is not located near the proposed project site," FERC attorneys wrote in a brief to the court.

But all three Democratic-appointed appeals court judges this morning appeared inclined to side with the Minnesota agency, saying the law doesn't stipulate that there are limits based on proximity.

"The commission seems wrong on all counts," said Judge Harry Edwards, a senior judge.

Judge Judith Rogers said, "How could Congress be any clearer?"

And Chief Judge Merrick Garland suggested the commission might be better served by focusing on whether states and municipalities are well adapted to develop projects, as opposed to focusing on proximity.

Michael Swiger, an attorney representing the Western Minnesota Municipal Power Agency, said in an interview last week that the outcome of the case will have broad implications.

For almost 100 years, FERC has applied the municipal preference provision to any state or municipality, Swiger said. He said the geographical limitation imposed by the agency is a "very vague standard" and its decision marks "a real shifting of the competitive landscape for these projects."

And these types of permits for hydroelectric projects are widespread across the country, Swiger said.

FERC's preliminary permits for hydropower are issued for up to three years. They don't authorize construction but give their holders priority when applying for a construction license.

FREIGHT:

Oil boom highlights need for funding -- Obama admin

Sean Reilly, E&E reporter

Published: Monday, October 19, 2015

Freight transportation projects warrant their own stand-alone source of federal funding, similar to what highways and public transit programs already receive, the Obama administration said in a newly released draft plan that points to the boom in domestic oil production as one reason for a more assertive national approach.

Shipments of oil and other energy products already account for more than 30 percent of freight traffic. And the existing pipeline network is generally not well-suited to handle new supplies coming out of places like the Bakken Shale oil fields in North Dakota and Montana and the Eagle Ford Basin in Texas, the plan says. As a result, skyrocketing volumes of oil train shipments have "created stresses on the railroads, contributing to some accidents among North American carriers and concerns about rail safety."

More generally, "we have a fragmented vision of how our freight system should look and operate, rather than a unified vision, with little clear accountability for its performance," says the draft document, dubbed the National Freight Strategic Plan.

The plan was released yesterday by Transportation Secretary Anthony Foxx during an appearance in Seattle. Between an increasingly competitive global marketplace and deteriorating facilities stateside, "the need for us to have a national freight plan could not be more urgent," Foxx said in the release.

Besides tapping existing grant funds for freight projects, the plan recommends that Congress adopt the administration's proposal to create two new programs that would devote $18 billion over six years to freight needs, covering ports, highways and other transportation modes.

The plan also urges more coordination between government and private businesses; improved tracking of freight trends; and a sustained effort to train new workers in the freight transportation sectors to replace those who are retiring.

Congress required the plan under the Moving Ahead for Progress in the 21st Century Act (MAP-21), a transportation authorization measure signed in 2012. The draft arrives about three months after the deadline set by lawmakers.

While there is bipartisan interest on Capitol Hill in freight issues, lawmakers have taken no action on the administration's bid for $18 billion in new grant funding contained in H.R. 2410, its version of a long-term transportation bill.

AIR POLLUTION:

Regs, curiosity drive new measurement technology

Published: Monday, October 19, 2015

Technology to measure carbon emissions and other pollutants has been rapidly advancing as stricter government regulations drive a need to quantify human impact on the planet.

These inventions are coming from massive Silicon Valley clean technology companies and government laboratories, as well as small academic labs such as the one at West Virginia University that discovered the Volkswagen emissions-testing scandal.

"There are a lot of companies picking up on this, but who is interested in the data -- to me, that's also fascinating," said Colette Heald, an atmospheric chemist at the Massachusetts Institute of Technology. "We're in this moment of a huge growth in curiosity -- of people trying to understand their environment. That coincides with the technology to do something more."

NASA is also developing new equipment to take multiple readings per day of air pollutants from a geostationary satellite to help scientists track how pollutants move across the planet.

"To understand our impact on the atmosphere and temperature changes in the future, you've got to know how that stuff's going to move around -- and we don't know that very well right now," said Annmarie Eldering, a NASA scientist who helps lead the project (William Yardley, *Los Angeles Times*, Oct. 18). **-- BTP**

MASSACHUSETTS:

Pilgrim closure highlights energy gap

Published: Monday, October 19, 2015

The announced closure of Massachusetts' only nuclear power plant will leave a large gap to fill in the state's energy portfolio, and lawmakers and activists are already weighing options over how to fill it.

The Pilgrim Nuclear Power Station supplies 680 megawatts of largely carbon-free electricity to the state, according to its operators, but soaring maintenance costs and falling natural gas prices led Entergy Corp. to plan to close the plant in 2019.

Environmentalists have expressed hope that wind and solar energy generation could rise to the occasion, but Gov. Charlie Baker (R) has moved to let Massachusetts purchase hydropower from Canada.

"Solar and wind are intermittent. They don't solve or meet our capacity requirement," Baker said Friday. "One of the things that makes hydro attractive to me is it's a baseload substitution and a baseload solution."

The energy need could also help the proposed Kinder Morgan natural gas pipeline, which Massachusetts officials have yet to take a position on (*EnergyWire*, Oct. 16). Environmentalists have asserted that approving the pipeline would jeopardize the state's goals from the 2008 Global Warming Solutions Act (Steve LeBlanc, AP/*Portland Press Herald*, Oct. 17). **-- BTP**

SOLAR:

Brattle Group's Fox-Penner says utility scale significantly more cost-effective than residential

Published: Monday, October 19, 2015

With the U.S. Energy Information Administration predicting a doubling in utility-scale solar installations by the end of 2016, how cost-competitive is it compared with other forms of solar? During today's OnPoint, Peter Fox-Penner, a principal at the Brattle Group, discusses a new analysis comparing the costs of utility-scale solar versus residential-scale projects. He also talks about the impact storage technology development could have on the pacing of installations.

Click here to watch today's OnPoint.

POWER PLAN HUB:

It's conference season for EPA carbon rule

Emily Holden and Rod Kuckro, E&E reporters

Published: October 19, 2015

Starting today, Infocast will hold its second annual Clean Power Plan Implementation Summit. The first day focuses on using natural gas to comply with the rule. Tomorrow's and Wednesday's sessions kick off with remarks from U.S. EPA Associate Assistant Administrator and Senior Counsel Joe Goffman before delving into legal issues, carbon-cutting options and power system considerations. A variety of state environment and energy officials, as well as electric regulators, will speak. Panelists also include utility and grid organization leaders, consultants, and environmental advocates. *ClimateWire*'s Elizabeth Harball will be there.

Also today, the Great Plains Institute and Bipartisan Policy Center host a workshop in Little Rock, Ark., to discuss implementation options with states and utilities from all over the midcontinent region. The two groups have been supporting talks among the Midcontinent States Environmental and Energy Regulators group and the Midwestern Power Sector Collaborative. Federal Energy Regulatory Commissioner Colette Honorable will give the keynote address. *EnergyWire*'s Jeffrey Tomich will report from Arkansas, and the event is also viewable by webcast.

POWER PLAYS

Each Monday, **Power Plays** previews upcoming moves on the way to Clean Power Plan compliance and recaps the week's developments.

Tomorrow, the Distributed Sun 2015 New Energy Summit in Washington, D.C., will feature a keynote address by Goffman on the Clean Power Plan.

On Wednesday, the Environmental Council of the States -- the organization of state environmental agencies -- holds its own meeting on the Clean Power Plan. Panels will explore state perspectives on the rule's regulatory and economic challenges and feature more than a dozen officials from diverse states. Acting EPA air chief Janet McCabe and White House senior policy adviser Megan Ceronsky will speak.

At 2 p.m. Thursday, the House Energy and Commerce Subcommittee on Energy and Power will hold a hearing on the legal aspects of EPA's CO2 regulations for new and existing power plants. *Greenwire*'s Jean Chemnick will be reporting.

In case you missed it:

- Five states face the highest Clean Power Plan compliance costs, according to Fitch Ratings (*ClimateWire*, Oct. 15).

- A group of states led by Tennessee will receive $800,000 from the Department of Energy to create a voluntary national energy efficiency registry, to standardize benchmarks for projects that could qualify for compliance with the Clean Power Plan (*EnergyWire*, Oct. 14).

- A Republican operative turned federal judge has emerged as one of the most powerful critics of President Obama's environmental rules (*Greenwire*, Oct. 13).

- Entergy Corp. will close Massachusetts' only nuclear power plant in 2019, which might complicate the state's efforts to reach greenhouse gas goals (*Greenwire*, Oct. 13).

- State officials in Minnesota held their first Clean Power Plan stakeholder meeting and are optimistic they can meet EPA's goals (*ClimateWire*, Oct. 13).

- Arkansas kicked off its planning process too and maintained a spirit of coordination (*EnergyWire*, Oct. 13).

- Missouri Attorney General Chris Koster, a Democrat, is joining a lawsuit against the rule (*EnergyWire*, Oct. 13).

For questions or comments about E&E's Power Plan Hub or related stories, please email staff reporters Emily Holden and Rod Kuckro at PowerPlanHub@eenews.net.

1.CLEAN POWER PLAN:

State regulators, utilities see advantages in mass-based approach to EPA rule

LITTLE ROCK, Ark. -- U.S. EPA's draft Clean Power Plan prompted concerns last year about a "dash to gas" -- a wide-scale, costly build-out of natural-gas-fired generation to replace retiring coal plants. The final plan issued Aug. 3, which is more geared toward facilitating emissions allowance trading, seems instead to be inciting another race -- one toward mass-based compliance plans.

Hi Ex. 7

One more question. Did the Gen 2 car make it from Oxnard to CARB today? If not, do you know when that is going to happen. We keeping getting inquiries if that has happened or not.

Thanks,

Byron

Hello Ex. 7 and Byron,

Many thanks for your feedback on the dealer presentation. I'm not sure if you have spoken but we have heard Byron's concerns and we will revise the slides and share them with you tomorrow morning. Hopefully we can have a short discussion about

the revised and simpler presentation tomorrow.

Thanks again and I appreciate the comments,

NUCLEAR POLICY:

DOE team crafting strategy for moving, storing reactor waste

Hannah Northey, E&E reporter

Published: Tuesday, October 20, 2015

The Obama administration is preparing plans for transporting used reactor fuel to temporary storage sites and creating a federal corporation to oversee the process, according to sources and documents obtained by *Greenwire*.

The Department of Energy has assembled a team of a dozen or so staffers to "lay the groundwork" for transporting spent reactor fuel from closed nuclear power plants to not-yet-identified interim storage sites,

team leaders said in a Sept. 2 presentation to the Office of Nuclear Energy.

The goal is to build a "foundation" for the organization that would oversee waste disposal, documents say.

The administration launched the "Nuclear Fuel Storage and Transportation Planning Project" three years ago under a strategy to build a pilot interim storage site by 2021, a larger interim site by 2025 and a new geologic repository by 2048.

The Sept. 2 presentation provides a new window into those plans.

Andrew Griffith, DOE's associate deputy assistant secretary for fuel cycle technologies in the Office of Nuclear Energy, will lead the effort. He'll report to John Kotek, the acting assistant secretary of nuclear energy, who's being vetted today by the Senate Energy and Natural Resources Committee for the full-time appointment (*E&E Daily*, Oct. 19).

Other key team members: Mark Nutt, a nuclear engineer at Argonne National Laboratory; Rob Howard, a senior project engineer at the Oak Ridge National Laboratory; and Melissa Bates, a DOE engineer who works on nuclear fuels and transportation.

In the near term, the group has been tasked with developing options for interim storage, establishing a database to characterize material that would go into the new waste management system, finding ways for the public to comment on storage and transportation options, and preparing for a pilot interim waste-storage facility.

DOE lists 13 closed nuclear plants where almost 18,000 used nuclear fuel assemblies are being held in dry storage casks -- large concrete vessels -- waiting for final disposal.

The department has expressed interest in moving forward with interim storage as a way to stave off costly lawsuits DOE faces for failing to uphold 1980s agreements to take possession of waste piling up at reactors across the country. Damages could be more than $20 billion by 2020 and up to $500 million annually after 2020, according to the Nuclear Energy Institute.

There have been rumors about the DOE team and the administration's focus on finding temporary solutions for the country's 70,000 metric tons of spent nuclear fuel circulating among industry officials for several weeks.

One industry source praised DOE for its effort to find storage options for reactor fuel after disassembling the Yucca Mountain, Nev., repository program five years ago.

"Since 2010, the department hasn't done a great deal on the back end of the fuel cycle, when Yucca was halted," the source said. "This is finally seeing some action on their part to move forward. While not with Yucca Mountain, which the industry, of course, would like ... they're beginning to plan and think about consolidated storage."

The presentation raises the question of whether DOE is considering proposals for interim storage in Texas and New Mexico, the source said.

Waste Control Specialists, a Dallas-based company whose former owner, billionaire Harold Simmons, once dubbed President Obama the most "dangerous man in America," unveiled plans earlier this year to build the nation's first private, temporary storage site for spent reactor fuel in arid West Texas.

And in New Mexico, Holtec International Inc. has proposed an underground storage facility to store casks of used fuel.

But the industry source also made clear Yucca Mountain must be part of the DOE package.

"The two -- consolidated storage and Yucca -- they can go forward together. And if they go forward, they need to do so together," the source said. "Consolidated storage is not a solution in itself. You need the repository, but the repository isn't going to be open for a couple decades at least."

Legal authority

As DOE inches toward resolving the country's waste issues, it faces constraints.

DOE has been warned by government watchdogs that it lacks clear legislative authority for consolidated interim storage or permanent disposal at a site other than Yucca Mountain. Nor can the department transport spent reactor fuel to temporary sites, the Government Accountability Office has said.

GAO also found the department would need to buy new equipment and fund costly upgrades if it were to pursue moving nuclear waste by rail.

"The federal government's ability to site, license, construct and operate a consolidated interim storage facility not tied to Yucca Mountain depends on new legislative authority," according to a GAO report to a House subcommittee.

A Republican congressional aide agreed DOE faces constraints under the 1982 Nuclear Waste Policy Act, and the department's activities on interim storage could trigger concern on the Hill as GOP lawmakers and the Nuclear Energy Institute have called for a federal thumbs-up or -down on Yucca Mountain before any other option is pursued.

"I think there would be concern about how far and what exactly they're trying to do that goes beyond the limits of the Nuclear Waste Policy Act," the aide said. "It's important DOE maintain a semblance of activity on the used fuel management program, but there are limits to how much generic work can be done in this space until you actually start. Whether it's interim or whether they want to move toward a repository, they need to have legal authority to do that."

But DOE is aiming to align its activities with the Blue Ribbon Commission on America's Nuclear Future, a presidential panel that called on Congress three years ago to develop nuclear storage sites and dumps.

The commission also warned that narrowly focusing on the development of Yucca Mountain would exacerbate a policy impasse that has stranded nuclear waste across the country (*Greenwire*, Feb. 1, 2012).

A DOE spokesman said the team is part of a strategy the department unveiled in March for tackling defense and commercial nuclear waste separately (*E&ENews PM*, March 24).

"Based on this announcement a team has been developing plans and performing technical analysis of various components of an integrated waste management system, as well as evaluating the Department's next steps in the consent-based siting process," Bartlett Jackson said in an email.

"The Department believes that siting of any facility for storage or disposal of nuclear waste should be done in a consent-based fashion consistent with the phased, adaptive, and consent-based approach that has been endorsed by the National Academies and the [Blue Ribbon Commission] and is an essential element of the administration's Strategy for the Management and Disposal of Used Nuclear Fuel and High-Level Radioactive Waste."

KEYSTONE XL:

Canadian elections make way for pipeline decision

Manuel Quiñones, E&E reporter

Published: Tuesday, October 20, 2015

This story was updated at 6:16 p.m. EDT.

With Canada's contentious elections now in the past, opponents of TransCanada Corp.'s Keystone XL oil pipeline from Alberta to Gulf Coast refineries say President Obama's decision on the project may be imminent.

Advocates on both sides of the KXL debate have said the White House may have put off its decisionmaking so as not to influence politics north of the border.

"I think we will see a rejection of the Keystone XL permit any day now," said Jane Kleeb, director for Bold Nebraska, a major opposition group. "Definitively before the Paris [climate] talks."

In a clear victory last night, the Liberal Party and its leader Justin Trudeau unseated the Conservative Party and current Prime Minister Stephen Harper.

Environmental advocates see the incoming Canadian government as friendlier to their concerns, including paying more attention to greenhouse gas emissions and international climate talks (*ClimateWire*, Oct. 19).

"The new Liberal government in Ottawa has an unprecedented opportunity to move Canada away from the dirty fuels of the past and toward a clean energy future that will bring jobs, prosperity and security for all Canadians," said the Natural Resources Defense Council's Canada project director, Anthony Swift, in a statement.

"We hope our good neighbors' new leaders will take real action on climate change by adopting a plan to meet its international climate commitments, stop the destructive expansion of tar sands and open environmental decision-making to sound science and broad public review," Swift said.

Lena Moffitt, head of the Sierra Club's Dirty Fuels campaign, said in another statement, "Justin Trudeau's victory shows that the Canadian people are no longer willing to rely on 19th century energy ideas to fuel their economy."

While incoming Prime Minister Trudeau has expressed strong opposition to Enbridge Inc.'s Northern Gateway project from Alberta to Canada's Pacific Coast because of environmental concerns, he has supported KXL.

"My support for Keystone is steadfast," Trudeau told the Canadian Broadcasting Corp. in a 2013 interview during a visit to Washington, D.C.

The nuance in Trudeau's argument against Harper is that the Conservative Party leader was too focused on KXL and willing to fray relations with the United States over the project.

"Canadians are sitting around worried about their jobs because we have a prime minister that doesn't like Barack Obama," Trudeau said during a debate. "We need to do much better than that."

'Soft support'

Adam Scott, climate and energy program manager at Environmental Defence Canada, described Trudeau's backing of KXL as "soft support" stemming at least in part from the oil industry's influence and the need to turn out voters in energy-producing regions.

"That support is very different from the kind of support we have seen from the Canadian government," which Scott described at "single-minded" in KXL's favor.

Environmentalists would have likelier been happy with the New Democratic Party and its candidate for prime minister, Thomas Mulcair. The New Democrats' goal was to establish a cap-and-trade system, and Mulcair has spoken out against KXL.

They cheered earlier this year when Alberta voters also threw out the staunchly pro-KXL ruling Conservatives in favor of the New Democratic Party and its leader Rachel Notley.

While Notley expressed commitment to stronger oversight of oil sands development, she did not oppose all pipelines. However, she dismissed making pro-KXL lobbying trips to Washington, D.C.

Still, Scott said Trudeau's election spells a "dramatic change" for Canadian environmental policy. He expects "very strong action on climate change."

And if Obama rejects KXL, as environmentalists think he will, Scott said, "It's likely Trudeau will take no for an answer on Keystone XL. I don't think anybody will be surprised or react too negatively ... if Keystone is rejected."

Scott and other advocates pointed to a poll showing that roughly half of Canadians are not too keen on KXL, even as a majority of Americans back the pipeline (*ClimateWire*, Oct. 7).

They also spoke about a top Trudeau loyalist stepping down from campaign efforts after news leaked about his aid to TransCanada.

In response to last night's political developments, TransCanada said the company would "work with the new government and all federal and provincial legislators in a respectful and positive manner" and touted its views on KXL's benefits.

"We can't think of a project that better embodies what has been one of the closest energy trading partnerships in the world," said TransCanada about U.S.-Canada relations.

During remarks on climate issues today, Secretary of State John Kerry pointed to the "very exhaustive review" underway within his agency. The 7-year-old scrutiny is meant to help the president decide whether to allow KXL to cross the U.S.-Canada border.

"I've said again and again that I want to get it done as fast as possible," said Kerry without providing a timeline. "It'll get done at its appropriate moment, but I'd like to see it get done as fast as possible."

This afternoon, White House spokesman Josh Earnest said the president congratulated Trudeau and also spoke about productive U.S. work with Canada under Harper, despite disagreements over KXL.

But Earnest, echoing Kerry, said the elections would have no impact on U.S. decisionmaking on KXL. He said the review remained at State.

Obama is meeting with Kerry and Vice President Joe Biden at the White House this afternoon. The White House has not said whether KXL will be a topic of discussion.

Beyond action at the federal level, TransCanada is still seeking a permit renewal to cross South Dakota. And it recently decided to seek Nebraska Public Service Commission approval for KXL's crossing through that state, a process that could take months.

TransCanada decided to give up its existing permit issued by the governor under a 2012 law the company pushed for and is moving to dismiss litigation by landowners against it.

But plaintiffs want to move forward with the case in an effort to undo the contested statute (*Greenwire*, Sept. 30). They tried to persuade a state judge to keep the litigation alive during a hearing yesterday.

"The public, and the landowners, and the Public Service Commission need and want the Court's decision on the merits," said landowner attorney Dave Domina. "Enough of duck and run behind lobbyists and money. The merits deserve a decision."

BIOFUELS:

Climate change fuels arguments on both sides in ethanol war

Amanda Reilly, E&E reporter

Published: Tuesday, October 20, 2015

As the Obama administration approaches a deadline next month to finalize multiyear renewable fuel targets, climate change is furthering arguments both for and against adding more ethanol to U.S. transportation fuels.

Ethanol foes have doubled down on their contention that the corn-based fuel increases U.S. greenhouse gas emissions. They've used that assertion to question ethanol's environmental benefits and argue against government support for the industry.

But biofuel producers are warning that the administration would undermine gains in reducing carbon from transportation fuels if it goes through with the proposed lowering of renewable fuel mandates. A reduced ethanol mandate, they say, would hurt investment in advanced biofuels.

The announcement last week that U.S. EPA's internal watchdog will study life-cycle greenhouse gas analyses of biofuels has fired up both sides in the ethanol battle, with each saying it will validate its claims about biofuels' carbon dioxide emissions.

"We welcome this review," ethanol trade group Renewable Fuels Association said in a statement, "as it will give the public a clearer picture of the climate benefits that ethanol is producing today."

Congress enacted the current renewable fuel standard in 2007 to promote the use of both corn ethanol and next-generation biofuels. Through the policy, EPA sets annual refining mandates for blending biofuels into gasoline and diesel.

EPA proposed earlier this year to set long-delayed targets for 2014 and 2015, as well as renewable fuel mandates for 2016 and the biodiesel requirement for 2017. While the agency proposed year-by-year increases in the use of biofuels, EPA's targets fall short of the levels that Congress wrote into the 2007 law.

EPA received more than 600,000 comments on the proposal and is working toward a Nov. 30 deadline to issue a final rule. A broad coalition of stakeholders, including environmental groups, the oil industry and small-engine users, have called on EPA to set even lower targets. Biofuel producers have pushed for more robust mandates.

The renewed focus on ethanol's climate change impact to further those arguments comes as President Obama is preparing for international climate change negotiations in Paris starting this December. The negotiations kick off the same day that the administration is poised to make a final decision on the RFS targets.

Last week, an industry coalition opposed to increasing RFS mandates launched an eight-week ad campaign called "Inconvenient Fact" to question ethanol's benefits. The ad claims that mandating corn for ethanol nearly doubles greenhouse gas emissions.

Opponents last week also highlighted a study by University of Tennessee researchers that questioned the environmental and economic track record of the renewable fuel standard (*Greenwire*, Oct. 15).

"Our analysis shows that the RFS has created more problems than solutions, particularly with regard to hampering advancements in biofuels," said UT researcher Daniel De La Torre Ugarte. "Corn ethanol was presented as a 'bridge' to advanced biofuels and a means of reducing GHG emissions. However, the reality is clear that this policy has been a bridge to nowhere."

Biofuel producers have pushed back against the questions about ethanol's environmental benefits and cast EPA's proposal as a step backward for Obama's domestic climate agenda even as it aims to negotiate an international agreement to address climate change.

They call the RFS the nation's only successful policy aimed at reducing greenhouse gases.

This summer, biofuel advocates followed Obama around the country as he pitched his climate change plan with ads that promoted the RFS (*Greenwire*, Aug. 31). A new RFS group formed by former Sen. Jim Talent (R-Mo.) has also recently hammered the same point (*E&E Daily*, Oct. 1).

"Why are they [the Obama administration] going to be proposing things and working for things that are aspirational that require cooperation from foreign countries that are going to be costing a lot of money," Talent told reporters recently, "and backing away from policies that reduce greenhouse gases today?"

IG to weigh life-cycle analyses

As debate intensifies, EPA's internal watchdog last week announced that it will take up its own study of how the agency has conducted life-cycle analyses of biofuels' carbon dioxide footprints (*Greenwire*, Oct. 16).

The Office of Inspector General said that it would examine how EPA has incorporated new emissions data from studies required by law. Among those studies is a 2011 report by the National Academy of Sciences that questioned whether the RFS was an effective policy for achieving greenhouse gas reductions.

Ethanol opponents cast the study as a way of updating life-cycle analyses that they don't believe capture all ethanol emissions.

"The federal renewable fuel standard is supposed to promote fuels that emit less global warming pollution than gasoline. But it's done just the opposite, stimulating a boom in ethanol made from corn, which over

its life cycle causes emissions of more climate-wrecking carbon than gasoline," said Emily Cassidy, a research analyst at the Environmental Working Group. "Yet the renewable fuel standard continues to encourage production of ethanol -- and now the EPA's internal watchdog wants to know why."

Four bipartisan lawmakers who have pushed for reform of the policy also said they were "pleased" the inspector general was taking up the RFS.

Reps. Jim Costa (D-Calif.), Bob Goodlatte (R-Va.), Peter Welch (D-Vt.) and Steve Womack (R-Ark.) have introduced legislation that would, in part, strike corn ethanol from refiners' RFS requirements.

"The negative impacts of the RFS are known," the four said in a joint statement, "and it is our hope that the IG's report provides much-needed clarity to the conflicting information the EPA has shared regarding the benefits of the RFS."

But biofuel groups are hoping for vindication with the OIG study.

"The RFS is the only meaningful policy to help break Big Oil's stranglehold on the liquid fuels marketplace," Tom Buis, co-chairman of ethanol group Growth Energy, said last week. "This is an energy policy that is working. It is doing exactly what it was intended to do, with great success."

Dueling studies

Whether the RFS -- and the expanded ethanol production that comes from it -- is an effective policy for addressing climate change remains an active area of debate among academics.

Several studies, including the University of Tennessee research, have cast doubt over whether ethanol and other biofuels lead to CO2 reductions compared with gasoline.

Others have come to opposite conclusions. The Argonne National Laboratory, for example, has found that ethanol reduces greenhouse gas emissions 34 percent compared with a gasoline baseline.

At a Brookings Institution event Friday in Washington, D.C., a pair of well-known RFS critics slammed the policy as being the least efficient means of reducing carbon dioxide emissions.

World Resources Institute fellow Tim Searchinger and Massachusetts Institute of Technology economist Christopher Knittel said policies such as cap and trade and a carbon tax are less expensive and risky than the RFS.

"Because we don't know very well what the land-use implications are, that's a riskier policy from a greenhouse gas perspective than a carbon tax," Knittel said.

Knittel suggested that the RFS was actually economically worse than doing nothing to address climate change. According to his research, abating 1 ton of carbon dioxide through the RFS will cost $90 -- much higher than the social cost of carbon, which is below $40 a ton.

But it's unlikely a more general climate policy would force change in the transportation fuel market the way the RFS has done, said Bruce Babcock, an energy economics professor at Iowa State University.

Babcock, an ethanol supporter, noted that practitioners of life-cycle greenhouse gas analyses haven't "bought into" research that's questioned the benefits of ethanol and other biofuels. He said U.S. biofuel production hasn't driven indirect land-use changes that contribute to global warming -- the key tenet of climate arguments against the RFS -- when land-use data over the last 10 years is taken into account.

Americans United for Change, a pro-RFS group, also pushed back against Knittel and Searchinger, charging that their research has been influenced by oil industry funding.

"There is a mountain of independent academic research," the group said, "showing that ethanol use significantly cuts down carbon emissions compared to gasoline made from dirty fossil fuels."

NEWSMAKER:

From energy developer to climate philanthropist

Anne C. Mulkern, E&E reporter

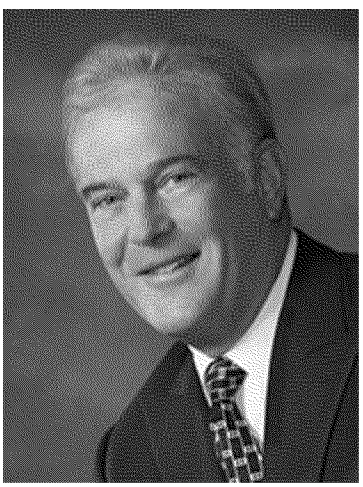
Published: Tuesday, October 20, 2015

DEL MAR, Calif. -- Richard Hertzberg worked on getting crude from the Canadian oil sands decades before the current debate about the Keystone XL pipeline.

He headed the Department of Energy's fossil fuel extraction division in 1978 and pledged support for a Canada-to-U.S. pipeline. Around the same time, he signed a contract funding investigation into horizontal drilling, a precursor to the technique now called fracking.

Hertzberg eventually launched his own company focused on unconventional oil development and utility-scale power generation.

Now he's using part of the wealth he accumulated on a cause some might see as a sharp turn: climate change. He and his wife, Carol, have given $5 million to Scripps Institution of Oceanography in San Diego for a center to research climate adaptation.



Richard Hertzberg. Photo courtesy of Richard Hertzberg.

It's needed to prevent international conflict as the effects of warming unfold, Hertzberg said. Statistics show 10 percent of the world's population lives at a sea level of 30 feet or less and is imperiled by rising waters, he said.

"That's an enormous number of people who are impacted by one of the effects of climate change,"

Hertzberg said. A lot can be done to deal with warming's impacts, he said, but they first must be understood correctly.

"Forward planning, forward thinking about it allows mankind over time to resolve its issues in a peaceful way."

The path from energy entrepreneur to climate patron isn't as much of a detour as it sounds, said Hertzberg, 69. He's always considered energy and the environment part of a "continuum," he said, arguing that it's wrong to treat fossil-fuel-based energy sources as the villain and the environment as the victim.

"This isn't payback time, and I don't feel any guilt for the good work that we've done for the last 40 years," he said. "Energy is something that man needs to go forward and procreate and multiply, and to feed itself."

Famine and war exist "when you don't have the energy to grow an economy, to provide for vital elements of life, to provide for life with dignity for people, to provide clean water," he said. "That's all available because of the development of energy."

Scripps, which is part of the University of California, San Diego, plans to use the $5 million from the Hertzbergs to build a center using experts from the school. They'll seek to address the most urgent questions of planners dealing with climate impacts, said Margaret Leinen, Scripps director and UC San Diego's vice chancellor for marine sciences.

"Certainly, we want to keep making the argument for reducing greenhouse gas emissions and other human impacts," Leinen said. "But we've got to start looking at what's going to be the results of those impacts and how can we adapt.

"It's absolutely critical that we start talking about helping people understand what they'll have to adapt to, and what kinds of strategies they have to adapt," she added.

Scripps last year held a workshop on sea-level-rise adaptation. The institution learned that while people might already know, for example, that waters could rise 30 centimeters in 40 or 50 years, she said, they wanted to understand what that means when combined with a storm surge. UC San Diego economists and other experts could present options for dealing with impacts and their costs.

"What the center allows us to do is partner with all of these other disciplines to look at these problems in a holistic way," Leinen said.

Clean energy 'panacea' not enough

Clad in a cream polo shirt, khaki shorts and flip-flops, Hertzberg ate a bowl of cauliflower soup at a beach cafe near his Del Mar home as he talked about his background and new focus on climate adaptation.

He's more or less retired from the energy development field and has been researching possibly investing in hydroponic farming, where food is grown without soil, often indoors. He's also dedicating time to help Scripps.

Of the $5 million, Scripps must find matching funds for $2.5 million. Hertzberg said he's working to find additional new donors for the climate adaptation center. He also envisions Scripps earning money through contract work it can do on adaptation.

"Our money was definitely meant to be a catalyst to help the university grow a center," Hertzberg said.

The donation comes as Hertzberg in recent years has moved to go green in his personal life. He drives a Toyota Rav4 plug-in electric vehicle. His wife has an Audi A3 TDI diesel they use for longer trips. (Hertzberg noted they bought it because it had low emissions, but that car now is caught up in parent Volkswagen's fraud in which it hid true pollution levels.)

Besides their home, they own a second property in northeast San Diego County, a 6-acre site with a 4,000-square-foot home, stables and its own water system. A dozen years ago, Hertzberg put a 10-kilowatt solar system -- about 60 panels -- on the site. Solar then cost at least triple its current price. California at the time gave half the amount back. He said he did it to support solar and because he believed the state's incentive would help push prices down.

The solar now fully powers all the buildings, along with water conveyance and purification, he said. The home also has a Tesla-made battery storage system, which was installed about 18 months ago. He was among a group of early testers for utility San Diego Gas & Electric.

A move to clean energy isn't enough, however, making climate adaptation essential, Hertzberg said.

"As much as we see renewable resources as a way out of the puzzle, their cost, the time to position them and their ultimate impacts will come later than some of the impacts that are already on the board from climate change," Hertzberg said.

"The panacea of clean energy, maybe it comes," he added. "But if it doesn't, there's going to be a whole lot of issues to deal with. Even if it comes, there's going to be a whole lot of issues to deal with."

During the 2011 Fukushima earthquake in Japan, he said, the nuclear reactor withstood the shaking. But the auxiliary cooling systems were not located high enough to withstand the resulting tsunami.

"How many power plants, refineries, other coastal resources are in areas where with sea-level rise they become impacted?" Hertzberg said. "To me, it's a lot better to begin to harden those assets."

Adaptation could involve everything from moving people and valuable infrastructure "to building dykes, to helping out species migration," he said. "If you're dealing with sea-level rise, what do you do in coastal zones to fortify yourself and to create the least havoc over time? How do you on a global basis support what will be the necessary migration of people?"

Same problems span decades

Questions about how to deal with climate change stretch back decades, Hertzberg said. He recalls it being an issue before he worked in the Carter administration, although he said people at the time also were debating whether global cooling was a possibility.

Hertzberg arrived in D.C. in the 1970s, during the energy crisis that hit when OPEC embargoed oil to the United States in response to the U.S. support of Israel.

He worked at the Energy Research and Development Administration (ERDA), the forerunner to the Department of Energy. After President Carter was elected, Hertzberg moved to the Office of Management and Budget, then to the newly created DOE, where he headed the Division of Fossil Fuel Extraction.

While there, Hertzberg said, he signed a contract to develop the technology for horizontal drilling. He looks at how unconventional drilling now has helped energy production and sees that as an event with roots in his work in the late 1970s.

"It's really fun to know, hey, we might have done something that might have had an impact," Hertzberg said.

Asked if he supports hydraulic fracturing and the Keystone XL pipeline, given his desire to address climate change, Hertzberg said the answers aren't simple yeses or nos.

Fracking and other unconventional oil drilling have provided natural gas, which has helped cut coal use and lowered carbon emissions, he said. That's needed as the world attempts to move toward zero greenhouse gas pollution.

But the transition will take decades, and until then "this substitution of cleaner fuels has been and will be one of the major sources of greenhouse emissions reductions that are economically feasible," he said in an email. In the meantime, he said, science-based regulations are needed to protect aquifers and the environment.

KXL, Hertzberg said, has become a "figurehead" in the debate over how to move from fossil fuels to green power. Alberta's production is about 2 million barrels daily, making it "still only a small part of what is a world market of some 90 million barrels per day." The market ultimately will determine whether it's needed, "based upon the cost of production as well as decreasing demand over time," he said.

"What is really important in this discussion is finding a way to ensure that all fossil fuels are priced to include a fair cost for the environmental impact of their production and use," Hertzberg said, "and to ensure that funds obtained through these pricing mechanisms are applied in ways that truly mitigate the impacts on the environment."

Ben Schlesinger, a Maryland resident who met Hertzberg in 1976 when both were at ERDA and has remained friends with him since, said it's not unexpected that someone who spent decades in fossil fuel development would now concentrate on climate work. Schlesinger is a consultant who earlier spent years working on natural gas.

"A lot of us in this industry ... we all understand the importance of fossils of all respects," Schlesinger said. "At the same time," he added, "we read. We understand. We study. A lot of us have kind of gone beyond being strictly focused on fossil fuels in our lives."

Political donor, mostly to Democrats

Hertzberg is on the board of directors of the NPR Foundation and the Center For Sustainable Energy, which has helped roll out California incentives for solar and clean cars.

He's been a political patron, too. Since 1996, he's given $63,200 to Democratic candidates, the Democratic National Committee and its House and senatorial campaign committees. In 2008, he gave $4,600 to Barack Obama.

He's given $2,000 to Republican candidates and political action committees, including $1,500 in 2002 to Americans for Prosperity, the PAC tied at the time to former San Diego-area Rep. Randy "Duke" Cunningham (R-Calif.), who resigned and went to prison for accepting bribes and tax-reporting violations. Hertzberg said the PAC solicited him to donate the money for a golf tournament, and he saw it as a way to meet lawmakers who could support his bid at the time to build a power plant in San Diego.

Hertzberg's wife, Carol, has given $79,500 to Democratic candidates and the national party. Even with all that money the household has given to Democrats, Hertzberg said he's still registered Republican. He said that's how he originally registered in New York, and he's never changed it.

"Both parties are owned by certain interest groups," he said. "On some of the social issues, the ones that are more impactful in terms of Democratic parties ... resonate with me."

Asked whether he's helped Democrats financially because of the climate issue, Hertzberg said that "environment is important. But I also think that, frankly, that too much of the politics of environment is politics, not necessarily sometimes good policy."

"How do you come up with the number 50 percent on petroleum use?" he said, on a day when California's S.B. 350, the legislation that proposed cutting petroleum use in half by 2040, was in the news. Democratic leaders ultimately stripped that provision from the bill because of a lack of support. "Can you really show me the net benefit of that?"

Hertzberg said he's not opposed to cutting oil use in half but would want to know why that amount was chosen.

"I really like to look at what the tradeoffs are," he said. As societies are working to cut greenhouse gas emissions, "there have been limitations put on that sometimes have unintended consequences."

Democrats, greens circle wagons against 'poison pill riders'

Geof Koss, E&E reporter

Published: Tuesday, October 20, 2015

Top Senate Democrats and environmentalists are drawing a line in the sand over the inclusion of policy riders in budget negotiations aimed at averting a government shutdown in December.

Senate Majority Leader Mitch McConnell (R-Ky.) continues to consider budget talks as a venue for pushing back against U.S. EPA policies (*E&ENews PM*, Oct. 13), but Sen. Chuck Schumer (D-N.Y.) said any agreement must replace looming sequestration cuts, provide balance between domestic priorities and military spending, and be free of "ideological poison pill riders."

"That's kindergarten politics," he told reporters on a conference call of the risk of another shutdown after Dec. 11, when the current continuing resolution expires.

League of Conservation Voters President Gene Karpinski cited the ongoing Volkswagen emissions scandal to highlight the risks of budget cuts to federal regulators. "Keeping environmental cops on the beat" is a top priority for green groups, he said on the call.

LCV and other environmental groups today issued a letter to President Obama and congressional leaders calling for higher funding levels and the omission of policy riders.

"The harmful funding cuts and short-sighted policy provisions in the House and Senate spending bills -- in particular the Interior, Environment and Related Agencies Appropriations bills -- would further undermine the ability of environmental, environmental justice, land management and wildlife agencies to perform their basic duties and are completely out of touch with the public interest," the groups wrote.

Schumer said Republicans should offer riders as amendments on the floor, rather than to front-load them into the spending bills.

"We'll have a debate over environmental rules," he said. "They know the public is on our side, and they'll lose."

After months of prodding by Democrats, top Republicans are in the early stages of discussing an agreement they hope will lead to an omnibus appropriations bill in December.

But Sen. Debbie Stabenow (D-Mich.) said she was concerned by the slow pace of the discussions, which she said is being hampered by uncertainty in the House over who will replace John Boehner (R-Ohio) as speaker.

"Without a leader in place, we don't know who we're negotiating with," she said on the call. "Everything has been thrown in turmoil."

As Capitol Hill awaits news of whether Rep. Paul Ryan (R-Wis.) will acquiesce to GOP calls to jump into the speaker race, Stabenow said she wants to see another deal such as the one the current House Ways and Means chairman negotiated with Sen. Patty Murray (D-Wash.) in 2013.

"Now what we need is a Murray-Ryan 2.0," she said.

POLITICS:

French foreign minister confident U.S. will keep climate vows

Lisa Friedman, E&E reporter

Published: Tuesday, October 20, 2015

BONN, Germany -- French Foreign Minister Laurent Fabius expressed confidence today that the United States won't abandon its international climate change promises, despite Republicans' insistence that they plan to do exactly that.

Speaking at a U.N. negotiating session ahead of landmark talks in Paris in December, Fabius said an agreement without the United States "would be without great sense."

All countries, he said, want to see the world's second-largest greenhouse gas emitter be part of a global agreement.

"Obviously, the political situation has to be taken into consideration, but I have no doubt about the will of President Obama," Fabius said.

"Up until now, he has been able to take a series of decisions which are going in the right direction, and I have no doubt it would be possible to move forward on the same line," he said.

Fabius' remarks come as U.S. special envoy for climate change Todd Stern prepares to testify in Washington, D.C., before the Senate Foreign Relations Committee on the Paris agreement. Stern has been pressing for a global deal that is not a full-blown treaty and would not have to go before the Senate for approval.

Foreign Relations Chairman Bob Corker (R-Tenn.) and many other Republicans have questioned whether the Obama administration has the constitutional authority to so, arguing that anything more than a nonbinding political document must come before them for approval (*E&E Daily*, Oct. 8).

Meanwhile, the U.S. Clean Power Plan to curb emissions from coal-fired power plants -- the backbone of the administration's international climate efforts -- is under attack in both the courts and Congress. Most Republican candidates for president have indicated they will scrap the regulations if they win the White House in 2016.

Fabius acknowledged the administration's need to avoid bringing a Paris agreement before the Senate, where it would surely be rejected.

"Obviously, we have to find the proper way from a purely legal viewpoint to make it possible, but I'm pretty confident that the sense of responsibility will prevail," he said.

NUCLEAR WASTE:

Fire at radioactive dump prompts air quality testing

Published: Tuesday, October 20, 2015

Nevada officials are testing air quality after a fire at a closed-down radioactive waste site in a rural southern area of the state.

The cause of the fire remains unknown, but Nye County sheriff's Sgt. David Boruchowitz reported no injuries or air quality risks after crews extinguished the blaze that ignited Sunday.

Division of Emergency Management and Homeland Security Regional Supervisor Bud Marshall said air testing was conducted, but no results were yet available.

The site, which took in low-level radioactive waste for three decades before closing in 1992, is located 10 miles from the small town of Beatty, Nev., about 100 miles northwest of Las Vegas.

Gov. Brian Sandoval (R) called in the Nevada National Guard and activated the state Emergency Operations Center in Carson City to coordinate the government response to the accident at the facility run by the state Department of Health and Human Services.

The department and governor's office did not immediately respond to requests for comment.

Several schools were shut down because of the fire.

According to the nonprofit Nuclear Resource and Information Service, based in Takoma Park, Md., the U.S. Geological Survey found high concentrations of radionuclides underground near the site during surveys in 1994 and 1998 (Ho/Ritter, AP/*Salt Lake Tribune*, Oct. 19). **-- DTB**

FEDERAL WORKFORCE:

Agencies repay student loans to attract, retain employees

Published: Tuesday, October 20, 2015

Student loan repayments are becoming a common incentive for federal agencies to recruit and retain employees, according to a new report from the Office of Personnel Management.

Last year, 33 departments and agencies gave more than $58.7 million in student loan repayment benefits to nearly 8,500 employees -- an average of $6,900 per person. Compared with 2013, that was 15 percent more employees and 11 percent more money given.

The payments last peaked in 2010, when about $85.7 million was given to nearly 11,400 employees, before declining in 2011, 2012 and 2013. Worries about recruiting skilled employees in STEM (science, technical, engineering and math) fields like cybersecurity are likely driving the benefit's increase. The Defense, Justice, State and Veterans Affairs departments and the Securities and Exchange Commission used four-fifths of the benefits last year.

"Employees in STEM career fields are vital to the federal government's mission," read the report, "and OPM is committed to continue working with agencies to help them attract and retain talented professionals using student loan repayments and other human resources management flexibilities."

Agencies are allowed to pay employees up to $10,000 annually to a total of $60,000 for some educational loans (Eric Yoder, *Washington Post*, Oct. 20). **-- BTP**

AIR POLLUTION:

Volkswagen may have to buy back cars with rigged software

Published: Tuesday, October 20, 2015

Volkswagen will likely owe compensation to the owners of its diesel cars that were fitted with emissions-rigging software and could have to buy back the vehicles.

More than 200 lawsuits have been filed against Volkswagen in the past few weeks, with many of them accusing the company of marketing its diesel Golfs, Jettas, Beetles and Passats as cleaner alternatives to gas engines while knowing they actually emitted illegal amounts of pollution.

Earlier this month, Volkswagen's head of American operations told a congressional panel that the company may compensate owners for the depreciated value of their cars but that it could take one to two years to fix all the cars (*Greenwire*, Oct. 8).

"Our clients don't want to wait a year. They don't want to be driving a dirty car," said Steve Berman, a Seattle lawyer who filed a lawsuit on behalf of nearly 70,000 Volkswagen owners in California. Other class-action lawsuits could eventually cover all U.S. owners, said University of Southern California law professor Greg Keating, who noted that plaintiffs are making the case that their cars are technically illegal to drive.

A buyback of the 482,000 affected Volkswagen cars in the United States would likely cost about $6.9 billion.

"It's really enormous for VW to have to buy these things back," Keating said. "But maybe they will have to" (Tom Krisher, AP/*Charleston* [W.Va.] *Gazette*, Oct. 19). **-- BTP**

JAPAN:

Worker's cancer may be from Fukushima radiation

Published: Tuesday, October 20, 2015

A worker at Japan's Fukushima Daiichi nuclear power plant that melted down in 2011 was diagnosed with cancer, potentially marking the first case of cancer stemming from the accident, according to the Japanese government.

The acknowledgment of radiation as a possible cause of the worker's leukemia undercuts the narrative that Japan's government and nuclear industry have promoted that radiation from Fukushima has had minimal health impacts (*Greenwire*, Oct. 8).

The worker, a man in his 30s, was a construction contractor at the Fukushima Daiichi plant and other nuclear sites, a Japanese health ministry official said. Though his radiation exposure was well below the annual limit for nuclear workers, the government conceded it could not rule out the radiation as a cause of his leukemia (Kiyoshi Takenaka, Reuters, Oct. 20). **-- BTP**

INTERNATIONAL:

Climate Policy Initiative's Buchner says innovative approach needed for public, private climate finance

Published: Tuesday, October 20, 2015

Climate finance has emerged as a key issue ahead of December's Paris climate meeting. What are the main barriers that stand in the way to scaling up financing? During today's OnPoint, Barbara Buchner, senior director of the Climate Policy Initiative and the head of the secretariat for the Global Innovation Lab for Climate Finance, discusses the lab's work to find innovative approaches to spurring public- and private-sector financing for climate change adaptation.

Mike,

I just rejected your certificate request. The plan for updating you describes sounds fine. Let me know if you have any other questions or need anything else.

Regards,

David

Hello David,

Can you reject our current certificate request? We will then correct the CSI with this and also battery specific energy.

Please let us know if the CSI contains sufficient battery details as you mentioned earlier. If so, we will reference this from section 10.

In addition, we plan to add a detailed technical document with charging and other information.

Regards,

Mike

Mike,

As I was getting ready to approve your certificate I noticed that the certificate lists the evaporative useful life as 120,000 miles. I believe this needs to be changed to 150,000 miles. The useful life requirement for Tier 3 evap is 150,000 when the vehicle is also certifying to a 150,000 mile exhaust emission standard. This useful life requirement is defined in 86.1813-17(a)(5).

Let me know if you have any questions regarding the information in this e-mail, or, if you think that I have erred in my reading of the regulations.

Regards,

David

Hello Jim,

I have submitted revision 2 application for MY16 test group GVGAV1.4V3B, for the Audi e-tron. This revisions is only to include a missing page for the OBD approval. No other changes were made.

Please let us know if you have any questions in processing the certificate for this application.

Regards,

Mike

Hello Jim,

I have submitted a correction to the application for the MY 2016 Audi A3 e-tron: Test Group GVGAV01.4V3B. I corrected the DF for Cold CO as well as evap standards in section 17. The changes are highlighted in yellow.

We also re-processed the CSI through Verify for the same corrections.

A new cert request was submitted. Please let us know if you have any questions during your review.

Thanks,

Mike

David,

Thanks for your input. We have made the discussed Application changes and submitted a new Certificate Request for your approval. Please check Verify for the latest Application version 4. You will find in Section 16 a training document which contains extensive technical specs/descriptions and battery charging procedures.

As a side note you will see that the battery state of charge is indicated to the driver in the lower left of the instrument cluster as seen below.

FILED

2015 OCT 16 P 3:29

CLERK US DISTRICT COURT
ALEXANDRIA, VIRGINIA

IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF VIRGINIA
Alexandria Division

THE CENTER FOR AUTO SAFETY Plaintiff, v. VOLKSWAGEN AG, VOLKSWAGEN OF AMERICA GROUP, INC., VOLKSWAGEN OF AMERICA, INC., AUDI OF AMERICA, LLC, and AUDI AG, Defendants.	Case No. 1:15 cv 1356 (LO/MSN) JURY TRIAL DEMANDED

COMPLAINT

Plaintiff The Center for Auto Safety ("CAS") brings this action on its own behalf and on behalf of its members against Volkswagen AG ("VWAG"), Volkswagen of America Group, Inc. and Volkswagen of America, Inc. (collectively, "VWoA"), and Audi of America, LLC and Audi AG (collectively, "Audi").[1] Plaintiff seeks injunctive and declaratory relief for Volkswagen's violations of the the California Unfair Competition Law, the California Consumer Legal Remedies Act, the Michgan Consumer Protection Act, Massachusetts General Law chapter 93A, and the District of Columbia Unlawful Trade Practices Act. Plaintiffs make the following allegations upon information and belief.

I. NATURE OF THE ACTION.

1. Four years ago, Martin Winterkorn ("Winterkorn"), Volkswagen's former Chief Executive Officer ("CEO"), announced Volkswagen's goal to become the world's largest

[1] Unless otherwise indicated herein, all of these defendants will be referred to collectively as "Volkswagen."

VW FOIA, EPA 06/20/2017 2017-FFP_034668

automaker. "By 2018," he told U.S. politicians gathered for the opening of a Volkswagen plant in Chattanooga, Tennessee, "we want to take our group to the very top of the global car industry."[2] With only a relatively small share of the gigantic United States market, Winterkorn's ambitious plan required a dramatic increase in sales in that market. And the way to increase sales here, Volkswagen decided, was to convince American consumers that its diesel-powered cars were a superior alternative, with better fuel efficiency, lower emissions, and uncompromised performance.

2. Between 2009 and September 18, 2015, Volkswagen aggressively marketed its so-called Clean Diesel Turbocharged Direct Injection ("TDI") light passenger vehicles in the United States, spending millions of dollars on print, television, internet and point-of-sale advertising aimed at convincing American consumers that its cars were environmentally-friendly, fuel-efficient, powerful, and reasonably priced. In order to increase its market share, Volkswagen's cars needed all those attributes to win over a skeptical American public. Compared with Europe, with its higher fuel costs, expensive cars and less stringent tailpipe emission standards, the United States market was a tough sell for diesel-powered passenger cars.

3. Until September 18, 2015, it looked as if Winterkorn's ambitious plan had succeeded. In July of 2015, Volkswagen surpassed Toyota Corporation ("Toyota") as the world's largest automaker, selling 5.04 million vehicles in the first six months of this year, compared to Toyota's 5.02 million.[3]

4. As noted above, the United States was a key part of this global strategy. As reported in *Automotive News*:

> Back in 2007, the automaker vowed to crank up U.S. sales of its VW brand to 800,000 vehicles a year by 2018. It was a dizzying

[2] http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

[3] http://www.usatoday.com/story/money/2015/07/28/volkswagen-surpasses-toyota-worlds-largest-automaker-first-half-2015/30772509/.

VW FOIA, EPA 06/20/2017 2017-FFP_034669

> sum, requiring more than a tripling of its volume at that time. Many in the industry scoffed.
>
> But with steady precision, VW got the skeptics to take a second look. It launched a lower-priced, Mexico-made Jetta and built a plant in Chattanooga that began churning out a new Passat that better fit American tastes and budgets. VW sales doubled between 2009 and 2012, to nearly 440,000, lifting hopes that 800,000 was doable.[4]

By October 1, 2015, VWoA had reported sales of 264,215 passenger vehicles in the United States through September 15, indicating that before the scandal that is the subject of this Complaint surfaced, it was expecting another excellent sales year.[5]

5. Indeed, Volkswagen was so successful in achieving brand loyalty in the clean diesel market, consumers are now left with few options for purchasing comparable vehicles and are left with the dilemma of remaining loyal to Volkswagen or looking for a different type of vehicle. As the New York Times recently reported:[6]

> "There's a bit of a hole in the marketplace," Ms. Caldwell said. "Other vehicles certainly could be substituted, but there aren't a lot of affordable fun-to-drive diesels out there."
>
> Other fuel-efficient and earth-friendly options are also significantly more expensive. VW's diesel technology has been the market's most affordable, adding as little as $700 to the price of a conventional gasoline model.

6. Unfortunately for American consumers, Volkswagen's success in capturing market share was based on a lie. On September 18, 2015, the United States Environmental Protection Agency ("EPA") and the California Air Resources Board ("CARB") both notified Volkswagen that it had violated federal and state laws and regulations by using a "defeat device"--software

---

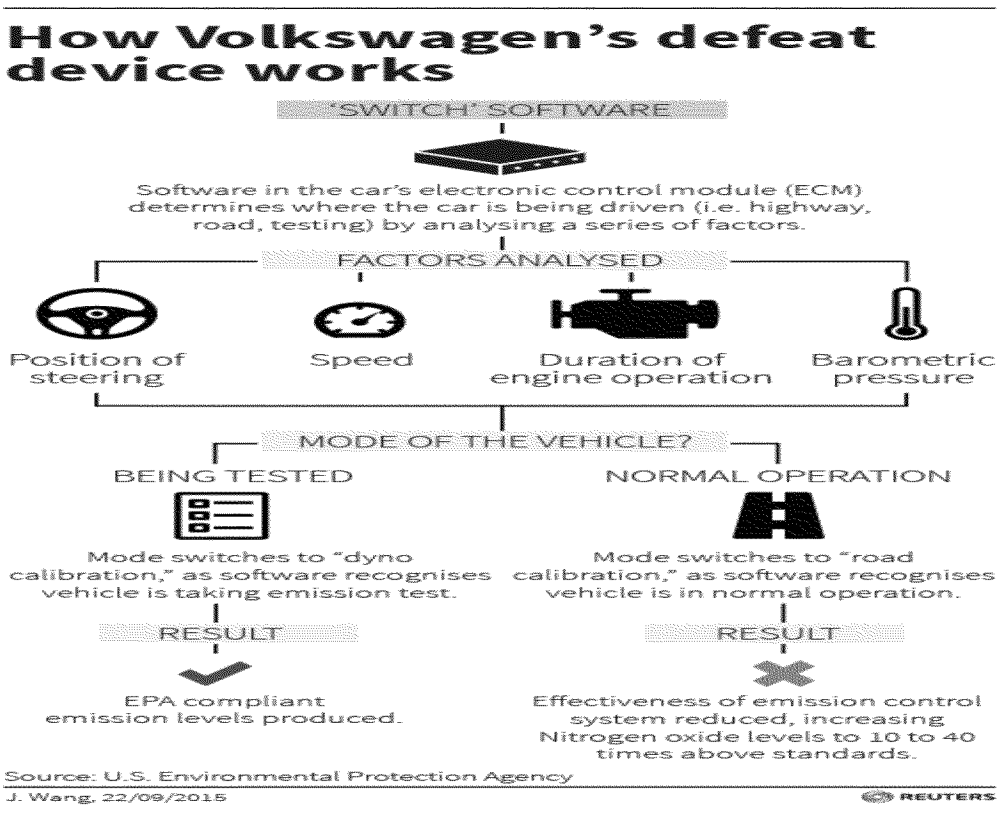
[4] http://www.autonews.com/article/20150126/RETAIL01/301269949/how-vw-veered--off-target.

[5] http://media.vw.com/release/1080/.

[6] http://www.nytimes.com/2015/10/09/automobiles/with-vw-no-longer-an-option-diesel-buyers-have-few-choices.html?smprod=nytcore-iphone&smid=nytcore-iphone-share&_r=0

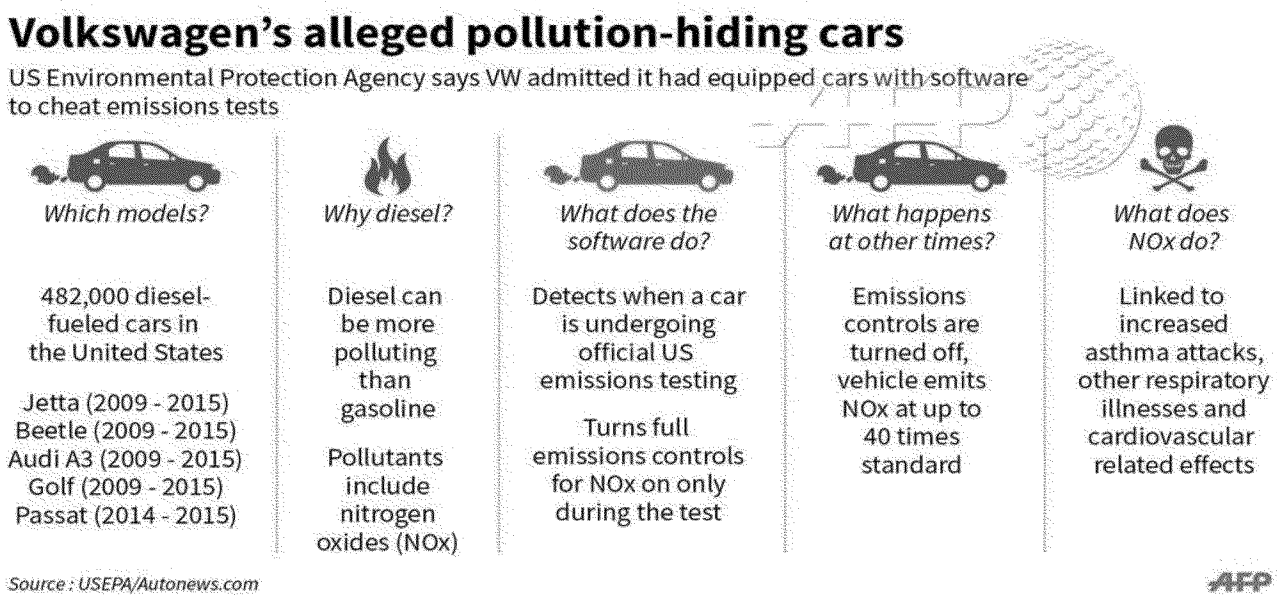
specifically intended to circumvent emission test procedures established by the EPA and by CARB. Those notices are attached as Exhibits 1 and 2 to this complaint.

7. Volkswagen's "defeat device" is a "sophisticated software algorithm"[7] that detects when the car is undergoing emissions testing. Under such laboratory test conditions, Volkswagen's vehicles pass the EPA and CARB emissions tests with flying colors. Under normal driving situations, however, the software algorithm ***turns off*** the emissions control systems, allowing the cars to spew as much as 40 times the allowable amount of pollutants--specifically nitrogen oxides ("NOx")--into the air. Elevated NOx contributes to the creation of ozone and smog, and is linked to asthma attacks, other respiratory diseases such as emphysema and bronchitis, and causes premature death. A diagram published in Reuters depicts its operation:



[7] http://www.theguardian.com/business/2015/sep/18/epa-california-investigate-volkswagen-clean-air-violations.

8. The chart below, published by *Agence France Press*, provides a useful and concise primer on the known facts:



9. As noted below, dozens of fatalities in the United States over the last seven years have been attributed to the illegal use of this "defeat device." The scandal has been popularly referred to as "Dieselgate."

10. Volkswagen has admitted to installing these "defeat devices" in 11 million diesel vehicles that have been sold around the world, including 525,000 in the United States. As Michael Horn ("Horn"), the President and CEO of VWoA, candidly admitted: "[l]et's be clear about this. **Our company was dishonest**. **With the EPA, and the California Air Resources Board, and with all of you. And in my German words, we have totally screwed up**."[8] (Emphases added). Horn further stated in a video on VWAG's website that **"[o]ur company betrayed the trust of you, our customers, our employees, our dealers and the public.**"[9] (Emphases added). And as

[8] http://www.roadandtrack.com/new-cars/car-technology/news/a26774/volkswagen-ceo-we-screwed-up/. A YouTube video of this extraordinary concession can be found here: www.youtube.com/watch?v=Q6z8uUJE-jE.

[9] https://www.vwdieselinfo.com/.

VWAG has posted on its website: "[g]overnment regulations limit the use of engine software that reduces the effectiveness of a vehicle's emissions control systems. **Those are the 'defeat device' regulations, and regrettably, VW violated those regulations. We take full responsibility** – and deeply regret that this happened."[10] (Emphases added). In a September 23, 2015 press release available on VWAG's website, the Executive Committee of VWAG's Supervisory Board stated: "[t]he Executive Committee takes this matter extremely seriously. **The Executive Committee recognizes not only the economic damage caused, but also the loss of trust among many customers worldwide.**"[11] (Emphases added). Or, as Berthold Huber ("Huber"), Deputy Chairman of the Supervisory Board, was quoted as saying in a September 25 press release, **"[t]he test manipulations are a moral and political disaster for Volkswagen. The unlawful behavior of engineers and technicians involved in engine development shocked Volkswagen just as much as it shocked the public.**" [12] (Emphases added).

11. In light of the scandal, VWAG's Management Board forced Winterkorn to resign as CEO of VWAG on September 23.[13] In doing so, he stated that "**I accept responsibility for the irregularities that have been found in diesel engines.**" (Emphases added). [14] He further observed that "**[m]illions of people across the world trust our brands, our cars and our**

[14] http://www.nytimes.com/2015/09/24/business/international/volkswagen-chief-martin-winterkorn-resigns-amid-emissions-scandal.html. Notably, however, Winterkorn plans to stay as the Chairman of the Board of Directors of Porsche Automobil Holding SE, which owns a 52% controlling stake in VWAG; he is also still demanding payment of the ten million Euros owed to him under his employment contract, which does not expire until 2016. http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

technologies. I am endlessly sorry that we have disappointed this trust. I apologize in every way to our customers, to authorities and the whole public for the wrongdoing." [15] (Emphases added). He professed surprise that "**misconduct on such a scale**" (emphases added) occurred within the Volkswagen group, suggesting that he had no knowledge of it.[16] It has been reported that Winterkorn was being investigated for fraud in connection with the conduct at issue here by prosecutors in Lower Saxony; however, more recently, those prosecutors have stated that any prosecution will await further factual information.[17]

12. Volkswagen has ordered its authorized dealers ("Volkswagen Authorized Dealers") to cease selling the vehicles in which the defeat devices are installed. These include at least the VW Jetta TDI (Model Years 2009-15), the VW Jetta SportWagen TDI (Model Years 2009-14), the VW Golf TDI (Model Years 2010-15), the VW Golf SportWagen TDI (Model Year 2015), the VW Beetle TDI and VW Beetle Convertible TDI (Model Years 2012-15), the VW Passat TDI (Model Years 2012-15) and the Audi A3 TDI (Model Years 2010-15).[18] These affected vehicles will be referred to in this Complaint as the "Affected Vehicles."

13. Volkswagen's internal investigation has resulted so far in the suspension of four executives: (a) Heinz-Jakob Neusser ("Neusser"); (b) Ulrich Hackenberg ("Hackenberg"); (c) Wolfgang Hatz ("Hatz") and (d) Falko Rudolph (Rudolph).[19] Spiegel Online described

Hackenberg's departure, which was also typical of the others: "[h]e received news of his immediate suspension from the personnel department and was asked to turn in his company phone and leave his office. He has also been told not to set foot on company premises."[20]

14. None of these people are mere obscure midlevel engineers. Hackenberg is a VWAG Board member for Technical Development.[21] The same Spiegel Online article described Hackenberg as "a long-time confidant of Winterkorn and, up until just a few days ago, one of the most powerful men at VW." Hatz is a Porsche AG ("Porsche") Board of Management member in charge of Research and Development and is additionally Head of Engines and Transmissions Development for the Volkswagen Group.[22] Neusser was responsible for engine development at Porsche commencing in 1998 and drivetrain development commencing in 2011; in October of 2012, he succeeded Hatz as Head of Powertrain Development at the Volkswagen Group.[23]

15. The same Spiegel Online article notes that Hans-Dieter Pötsch ("Pötsch"), the VWAG Finance Chief and Board Chairman of VWAG, may also be under investigation by regulatory authorities. As discussed below, Volkswagen told the EPA about the use of a defeat device on September 3 (if not earlier), but disclosed it to investors only on September 20. "[T]he finance chief remained silent for 17 days. During these 17 days, hundreds of thousands of investors bought VW stock. When the scandal was finally made public on Sept. 20, the price of VW shares plunged by 40 percent, costing stockholders €35 billion."[24] VWAG's shares have been on a steady

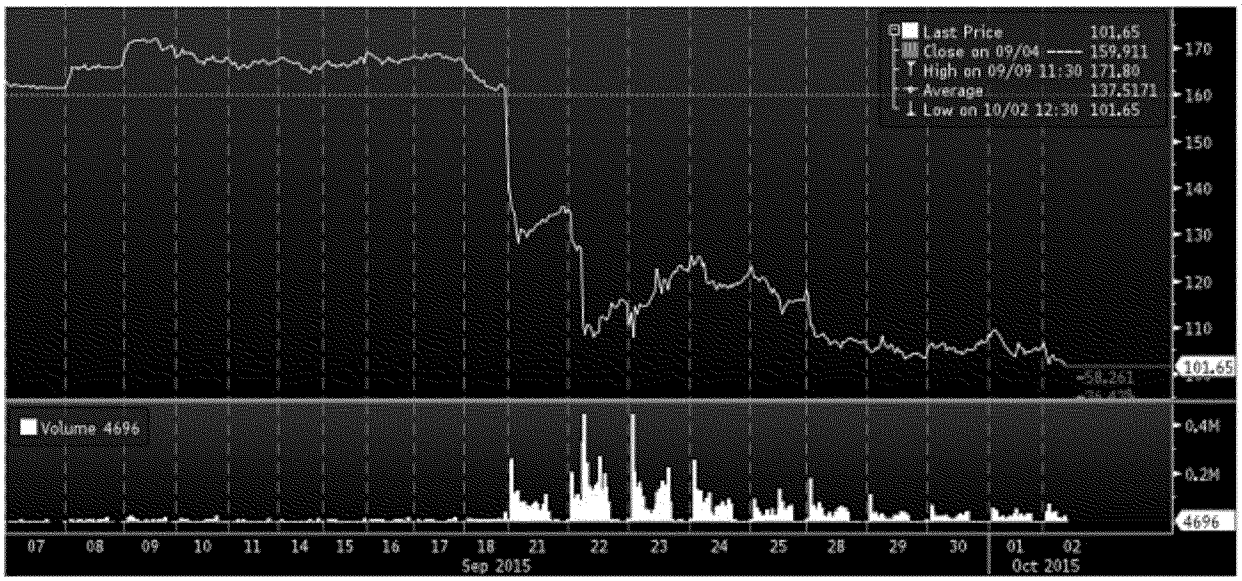
[24] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

decline ever since, as reflected in this graphic from the *Telegraph* in the United Kingdom:



16. According to an October 3 article from Reuters, "[a]t an internal company meeting this week at the VW headquarters in Wolfsburg, Pötsch described the situation as an 'existence-threatening crisis for the company', Germany's *Welt am Sonntag* reported in a release ahead of Sunday's publication."[25]

17. As explained below, and contrary to the suggestions of some of Volkswagen's spokespersons, the unlawful conduct here was not the action of renegade lower-level employees. It was instead the product of a concerted scheme by top executives at Volkswagen to save costs through use of the TDI technology, break into the United States diesel passenger car market by

[25] http://mobile.reuters.com/article/idUSKCN0RX0GQ20151004. Pötsch's accession to the VWAG Board has been criticized. Hans-Christoph Hirt, a director of Hermes Equity Ownership Services, an adviser to pension fund investors in companies including Volkswagen, said the appointment created a "serious conflict of interest": "[Pötsch] was a key VW executive for more than a decade and under German law the management board has a collective responsibility . . . The lawyers will surely demand that he recuse himself from any supervisory board meetings when management's role is discussed." http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.

VW FOIA, EPA 06/20/2017 2017-FFP_034676

concealing from regulators and the public the inability of cars using that technology to meet federal and state emissions standards, market the TDI cars through an elaborate seven-year long campaign of false advertising and lying to state and federal officials, and thereby obtain a monopoly share of the United States Clean Diesel passenger car market.

18. The German periodical *Bild am Sonntag* revealed that Robert Bosch GmbH ("Bosch"), the supplier of some components of the emissions control system, used by Volkswagen in TDI diesel vehicles, also supplied Volkswagen with diesel software for test purposes. Bosch reportedly told VWAG in 2007 that using that software in vehicles on the road would be illegal.[26] Similarly, *Süddeutsche Zeitung* has reported that Neusser had ignored least one Volkswagen engineer's warnings over "possibly illegal" practices in 2011.[27] Spiegel Online reported that groups within Volkswagen knew of potential issues as far back as 2005 or 2006.[28] OlafLies,a VWAG Board member, has stated publicly that **"[t]hose people who allowed this to happen, or who made the decision to install this software--they acted criminally. They must take personal responsibility**."[29] (Emphases added).

19. As discussed in further detail below, Volkswagen has set aside the inadequate sum of 6.5 billion Euros (approximately $7.2 billion) to deal with the fallout from this fraud. Numerous countries across the world are investigating the matter and here, in the United States, probes are being conducted by the United States Department of Justice ("DOJ"), a coalition of state attorneys general ("AGs"), and members of the United States House of Representatives. The EPA has ordered a recall.

II. THE PARTIES.

A. Plaintiff

20. CAS is a non-profit, Section 501(c)(3) public interest organization headquartered in Washington, DC. It was founded by consumer advocate Ralph Nader and Consumers Union in 1970 to provide consumers with a voice for auto safety and to provide information to consumers on how to purchase the best motor vehicle for their needs. CAS has over 15,000 members nationwide. CAS is dedicated to promoting automobile and highway safety, ensuring that defective and unsafe automobiles and automobile equipment are removed from the road, helping make roads safer for motor vehicles through safer designs and traffic, and working for improved fuel efficiency and lower emissions from motor vehicles.

21. As part of its commitment to improved fuel efficiency, in 2008, the CAS integrated into its programs the Safe Climate Campaign which aims to fight global warming by promoting laws and regulations that require strict emissions standards. The Safe Climate Campaign also pushes automakers to make clean, energy efficient vehicles, and urges consumers to make energy-efficient choices in transportation.

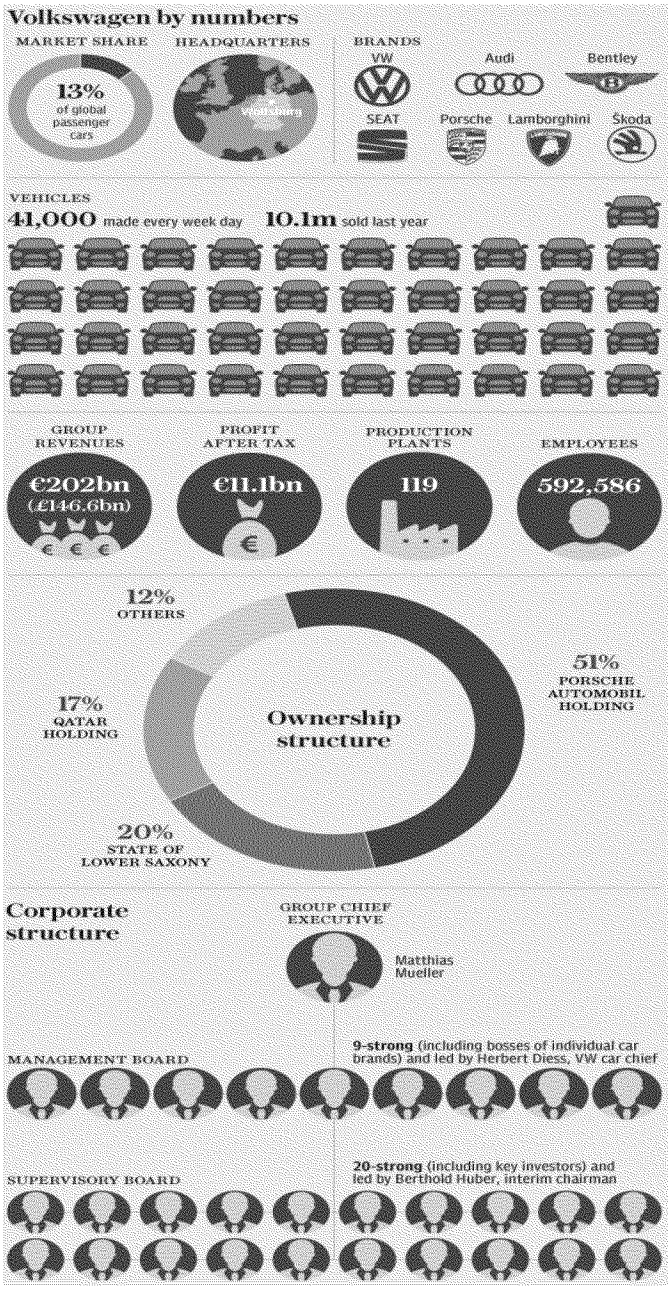
22. CAS has individual standing as an organization because it has been harmed by Defendants' wrongful conduct as alleged herein. CAS had devoted considerable time and resources encouraging automakers to sell energy-efficient vehicles and encouraging members to purchase clean, energy-efficient vehicles. As a result of Defendants' unlawful conduct, CAS has had to redirect staff time and financial resources away from its planned activities.

23. CAS also has associational standing on behalf of its members who have claims against Defendants for the violations alleged in this complaint. In addition to the redress it seeks for its own injury, and where its members are entitled to so and the claims for relief otherwise permit, CAS seeks declaratory and injunctive relief.

VW FOIA, EPA 06/20/2017 2017-FFP_034678

B. Defendants

24. Defendant VWAG is a car corporation organized and existing under German law, with its principal place of business in Wolfsburg, Germany. VWAG is the parent company of Defendants VWoA and Audi. The structure of VWAG is set forth in the following chart:



25. Defendant Audi AG is a car corporation organized and existing under German law, with its principal place of business in Ingolstadt, Germany. It is owned by VWAG. Audi was

created when VWAG merged two of its companies, Auto Union and NSU Motorenwerke AG. Audi is a 99.55%-owned subsidiary of the Volkswagen Group. Audi is now Volkswagen's luxury vehicle brand, and uses the slogan "Truth in Engineering".

26. Defendant the Volkswagen Group of America, Inc. is a corporation organized and existing under New Jersey law. Its headquarters are in Herndon, Virginia. The Volkswagen Group of America, Inc. is a wholly-owned subsidiary of VWAG. It is one of the world's largest producers of passenger cars. Through Volkswagen of America, Inc., it sells the Beetle, Beetle Convertible, CC, Eos, e-Golf, Golf, Golf GTI, Golf SportWagen, Jetta, Passat, Tiguan, and Touareg vehicles through Volkswagen Authorized Dealers located in the United States. Volkswagen Group of America, Inc.'s operations in the United States include research and development; parts and vehicle processing; parts distribution; sales, marketing and service offices; financial service centers; and manufacturing.

27. Defendant Volkswagen of America, Inc. is owned and operated by the Volkswagen Group of America, Inc. and sells Volkswagen vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

28. Defendant Audi of America, LLC is a subsidiary of Audi AG that sells Audi vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

III. JURISDICTION AND VENUE.

29. This Court has jurisdiction over this action pursuant to 28 U.S.C. §§ 1332(a) and 1367. The cost of compliance with the requested injunctive relief exceeds $75,000.

30. Venue is proper in this judicial district and in the Alexandria Division thereof pursuant to 28 U.S.C. § 1391(b) and (c), in that at least one of the Defendants resides in this judicial district, is licensed to do business or is doing business in this judicial district.

IV. TRADE AND COMMERCE.

31. Approximately 482,000 Affected Vehicles have been sold or leased in the United

VW FOIA, EPA 06/20/2017 2017-FFP_034680

States in a continuous and uninterrupted flow of interstate commerce and foreign commerce during the last seven years, including through and into this judicial district. The business activities of the Defendants substantially affected interstate trade and commerce in the United States and caused antitrust injury in the United States.

V. FACTUAL ALLEGATIONS.

A. Automobile Emissions Regulations in the United States.

32. Congress enacted the first major Clean Air Act ("CAA") and established the EPA in 1970. The CAA, amended in 1975 and 1990, requires vehicle manufacturers to certify to the EPA that their cars and trucks will meet applicable federal emission standards.[30] The EPA administers a certification program to ensure that every vehicle complies with its emission standards. EPA-issued certificates of conformity are required for every vehicle sold in the United States, and the EPA must approve every vehicle entering United States commerce. In these certification efforts, the EPA relies on test data submitted by automobile manufacturers, which submit the vehicles to the agency's testing procedures in their own laboratories. The EPA audits a small fraction of the new vehicles each year to ensure compliance in a process known as "confirmatory testing."[31]

33. The Affected Vehicles, like any other car sold in the United States, were required to satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. §86.1811-4; Clean Air Act §101(b)(1) – (2), 42 U.S.C. §7401(b)(1)(2).

34. Section 203(a)(3)(b) of the CAA prohibits the manufacture, selling, or installation

---

[30] http://www2.epa.gov/laws-regulations/summary-clean-air-act.

[31] http://www.autonews.com/article/20151004/OEM11/310059955/vw-emissions-violations-put-self-certification-under-new-scrutiny. The EPA has a webpage describing that process in detail. http://www3.epa.gov/otaq/cert/eng-cert/confirmatory/overviewconfirmatorytesting/overviewconfirmatorytestingscript_updated.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_034681

of any device that bypasses, defeats or renders inoperative a required element of a vehicle's emissions control system. 42 U.S.C. §7522(a)(3)(b). Section 203(a)(10 of the same statute also prohibits the sale of motor vehicles or engines that are not covered by valid certificates of conformity with applicable emissions standards. 42 U.S.C. §7522(a)(1). The regulatory requirements for defeat devices are set forth in 40 C.F.R. Part 86.

35. The EPA has been rigorous in punishing automobile manufacturers or engine makers that utilize defeat devices. For example, in late 1995, it entered into a $45 million dollar settlement with General Motors Corporation regarding the use of defeat devices on 470,000 Cadillac cars.[32] Likewise, in August of 1998, it fined Honda $267 million and Ford $7.8 million for selling vehicles equipped with defeat devices that prevented emission control systems from working properly.[33] Similarly, in October of that year, it and the DOJ fined seven truck and heavy duty equipment manufacturers $83.4 million for engaging in similar conduct.[34]

36. Volkswagen was or should have been aware of these precedents. Indeed, the company itself is a recidivist violator of the CAA. In July of 1973, the EPA referred to DOJ for legal action a claim that defeat devices were installed on 1973 Volkswagens. A copy of that referral is attached as Exhibit 3 to this complaint. The matter was settled for $120,000 in March of 1974.[35] Similarly, in June of 2005, Volkswagen entered into a consent decree with DOJ whereby it paid a $1.1 million penalty concerning its failure to notify the EPA of emissions defects

[32] http://www.autosafety.org/sites/default/files/imce_staff_uploads/Cadillac%20%2445%20Million%20Defeat%20Device%20Penalty%2011-31-95.pdf.

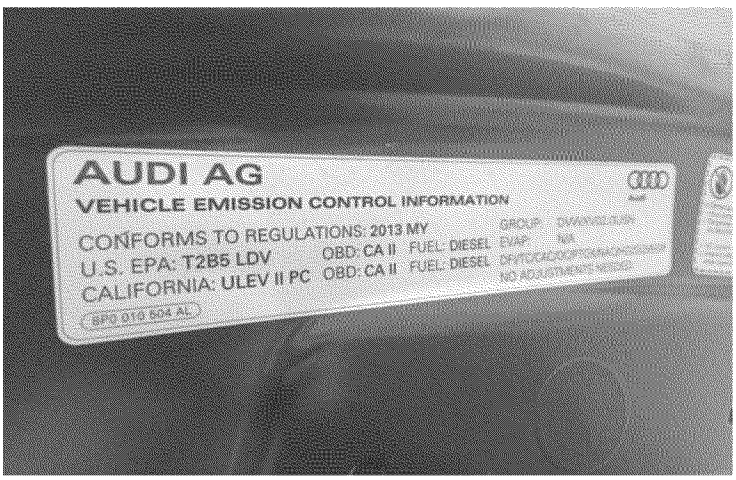
VW FOIA, EPA 06/20/2017 2017-FFP_034682

in certain vehicles manufactured at its facility in Mexico.[36] A copy of that decree is attached as Exhibit 4 to this Complaint.

37. CARB is a department of the California Environmental Protection Agency. It was created in 1967. California is the only state permitted to have such a regulatory agency, because it was created prior to the enactment of the CAA. CARB's mission is to "[t]o promote and protect public health, welfare and ecological resources through the effective and efficient reduction of air pollutants while recognizing and considering the effects on the economy of the state."[37]

38. The EPA introduced phased in Tier 2 emissions standards from 2004 to 2009. California has similar standards in its CA LEV II standard. The Tier 2 Bin rating system applied to all passenger vehicles regardless of fuel type. Tier 2 Bin 5 standards—the ones applicable to the Affected Vehicles—imposed an emission rate for NOx of 0.07 grams per mile.[38]

39. New cars that are sold bear stickers indicating that they are EPA-and/or CARB compliant. Here is a photograph of such a sticker on the inside of the hood of a TDI Audi A3, one of the Affected Vehicles.

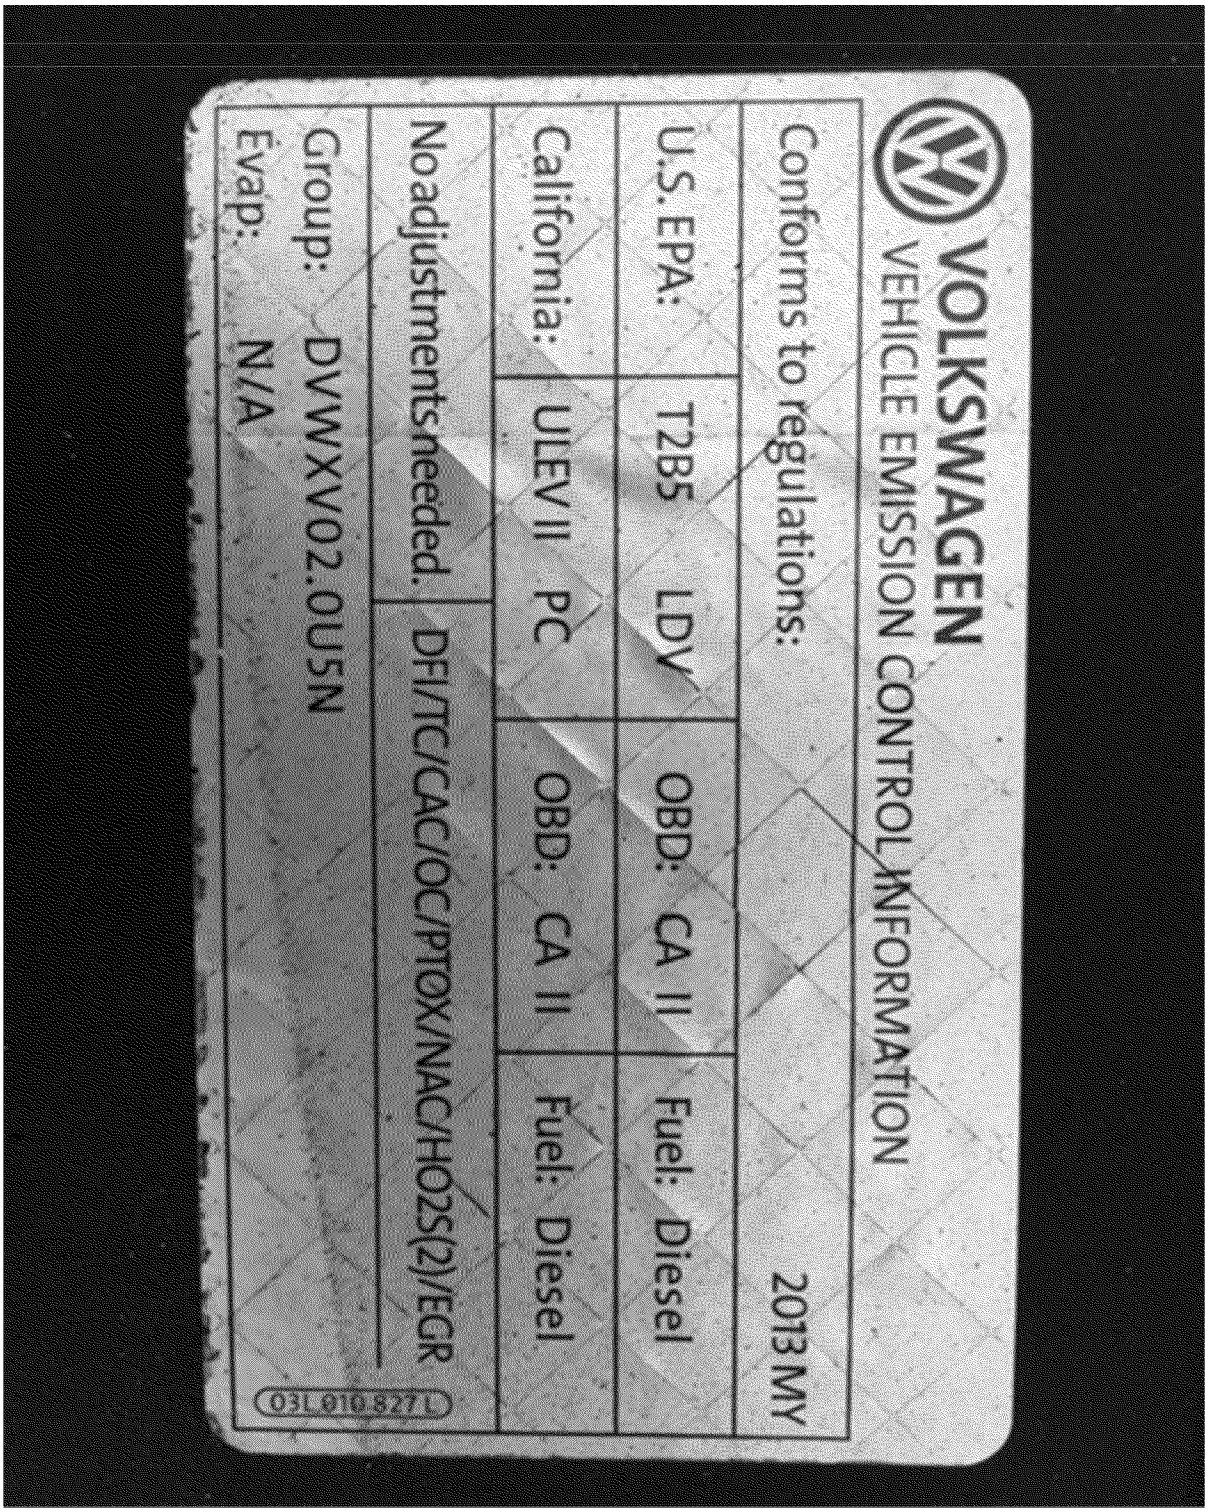


[36] http://www.autosafety.org/sites/default/files/imce_staff_uploads/volkswagen-cd.pdf.

[37] http://www.arb.ca.gov/html/mission.htm.

[38] http://www.nctcog.org/TRANS/air/vehicles/tech/compliance/index.asp.

And here is a similar sticker for a 2013 TDI Volkswagen Golf:



Through these types of notice, Volkswagen was representing to customers that the Affected Vehicles complied with federal and state emissions laws. This was an outright lie.

B. Diesel Cars and Control of NOx Emissions.

40. Diesel-powered cars, like gasoline-powered cars, must also meet the emissions standards established by the EPA and CARB. With diesel-powered engines, car manufacturers must use different--and more expensive--emission control systems than are used in gasoline-powered cars.

41. Diesel fuel has a greater energy density than gasoline. It converts heat into energy more efficiently than gasoline, sending less heat out of the tailpipe than gas-powered vehicles. Because it has greater energy density, diesel also is more efficient: diesel vehicles can get up to 30% more miles per gallon than similar gasoline-powered cars. In addition, because of their higher compression, diesel engines can generate a lot of torque, providing strong acceleration and additional power needed for towing.

42. While diesel vehicles have certain advantages over gasoline, they also have some disadvantages. Because diesel fuel is heavier and oilier than gasoline, it can generate more pollution. While diesel engines emit lower amounts of carbon monoxide than gasoline-powered engines, they emit more NOx.

43. Diesel fuel exhaust has been recognized by the World Health Organization to be a carcinogen for humans.[39]

44. Automakers have faced significant challenges in controlling NOx emissions sufficiently to meet environmental standards, particularly with smaller vehicles, and particularly in the United States, which has some of the strictest emission controls in the world. The website of greencongress.com explains the two types of approaches diesel automobile manufacturers have

[39] http://www.iarc.fr/en/media-centre/pr/2012/pdfs/pr213_E.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_034685

used to deal with NOx emissions:

> Broadly, there have been two catalytic approaches used to reduce exhaust NO_x: urea-based selective catalytic reduction (SCR) and lean NO_x trap (LNT) catalysts.
>
> --The urea-SCR (urea=AdBlue) approach requires on-board storage of the reductant fluid which is introduced into the exhaust upstream of the SCR catalyst. It is then converted to ammonia which interacts with NO_x on the SCR catalyst to form water and nitrogen.
>
> --LNT technology utilizes fuel from the vehicle and advanced engine controls to enable periodic operation of the engine at rich air-to-fuel ratios to produce oxygen-depleted exhaust suitable for reducing NO_x stored on the LNT catalyst surface.[40]

45. The article indicates that Volkswagen had planned to use both technologies as of 2007, but elected to go with the LNT approach (which it referred to as TDI). As explained below, the deciding factor was apparently cost. Because of the extra equipment (including a urea tank) and technology required to clean the NOx emissions from the diesel exhaust, SCRs can add significantly to the cost of producing the engine. They also make diesel cars heavier than they otherwise would be, thus potentially decreasing fuel efficiency, torque and power.

46. Honda, which sells diesel cars in markets other than the United States, never tried to sell them here. That is because, according to Honda's research, "[t]he market would not bear the costs of doing diesel correctly." In order to meet the stringent United States emissions standards, Honda would have had to add costly emissions controls to every diesel model, which would make them more expensive than gasoline-powered competitors. "At such a high premium, customers simply wouldn't buy them."[41]

C. Volkswagen's Decision To Use TDI Technology.

47. Volkswagen has been selling cars in the United States since 1949, when it introduced the iconic Volkswagen Beetle. Although it was for many years the top-selling imported

[40] http://www.greencarcongress.com/2015/09/20150921-vw2l.html.

[41] http://mashable.com/2015/09/27/vw-dieselgate/#2VosDbcL7iqT.

VW FOIA, EPA 06/20/2017 2017-FFP_034686

car in the United States, Japanese imports overtook Volkswagen and other European imports in the 1990s.

48. The decisive factor in the decision to use TDI technology in 2007-08 was the appointment of Winterkorn as CEO of VWAG in January of 2007. Winterkorn was involved in overseeing research and development and had that responsibility at the time he resigned as CEO. In 1995, he took over as the head of Volkswagen Group Product management and a year later, he assumed the role of Member of the Board of Management for "Technical Development" at the Volkswagen brand. He assumed a similar role when he became Chairman of the Board of Management at Audi.[42]

49. Before Winterkorn took over as VWAG's CEO on January in 2007, Volkswagen had partnered with Bosch and Daimler to explore the use of a diesel emissions control system called BlueTec.[43] BlueTec was a technology developed by the latter two companies and championed by Wolfgang Bernhard ("Bernhard"), former head of the Volkswagen brand and a former Daimler executive. BlueTec was an SCR technology; it required the use of a liquid urea tank, so that urea could be sprayed onto the emissions in order to neutralize the NOx. The urea tank not only takes up space and adds weight (disadvantages that are especially acute in the market for small, fuel-efficient cars), but also requires the owner to refill the tank, making the diesel engine more inconvenient than a traditional gasoline-powered car. When Bernhard left the company after Winterkorn took control, the BlueTec technology was scrapped for smaller vehicles. Volkswagen only began using a form of SCR technology on a few of its smaller vehicles in 2012.

50. *Automotive News* describes the sequence of events:

> *Bild am Sonntag* said the roots of the crisis were planted in 2005 when then-VW brand Chief Wolfgang Bernhard wanted VW to

[42] *See* http://www.volkswagenag.com/content/vwcorp/content/en/the_group/senior_management/winterkorn.html.

[43] For the source of this information, *see* http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_034687

> develop a new diesel engine for the U.S. market. Bernhard recruited Audi engineer Rudolf Krebs who developed a prototype that performed well in tests in South Africa in 2006, the paper said.
>
> Bernhard and Krebs argued that the only way to make the engine meet U.S. emission standards was to employ in the engine system an AdBlue urea solution used on larger diesel models such as the Passat and Touareg, according to the report.
>
> This would have added a cost of 300 euros ($335 in today's U.S. dollars) per vehicle -- a sum that VW finance officials said was too much at a time when a companywide cost-cutting exercise was under way.
>
> Bernhard left VW in January 2007 before the diesel engine went into production. Krebs was moved to another role when Martin Winterkorn became VW Group and brand CEO in 2007.
>
> Winterkorn, Audi's former CEO, asked Audi development boss Ulrich Hackenberg and Audi engine boss Wolfgang Hatz to move to VW's Wolfsburg headquarters and continue development work on the engine, *Bild am Sonntag* said.
>
> The engine then ended up in VW Group diesels with its engine software manipulated to fool diesel emissions tests in the U.S.[44]

Hatz and Hackenberg, as noted above, were two of the executives whom VWAG recently suspended.

51. Engineers at Volkswagen had been looking at an alternative to BlueTec technology, an alternative that ultimately evolved into the TDI "Common Rail" system. In 2006, Richard Dorenkamp, head of Volkswagen's diesel engine development, gave a presentation in Detroit. He described the TDI system Volkswagen engineers developed and how it could be used in small cars and meet increasing US demands for fewer emissions.[45] Volkswagen's TDI Clean Diesel pollution

---

[44] http://www.autonews.com/article/20150927/COPY01/309279989/bosch-warned-vw-about-illegal-software-use-in-diesel-cars-report-says. Winterkorn was generally very concerned about the costs associated with developing eco-friendly automotive engines. As he said at the 2014 Paris auto show, "[c]limate protection is not available free of charge. Every gram of reduction in [tailpipe] C02 costs us 100 million euros. Every gram!" http://blog.caranddriver.com/vws-winterkorn-to-greens-so-get-off-our-backs-already/.

[45] http://www1.eere.energy.gov/vehiclesandfuels/pdfs/deer_2006/session7/2006_deer_dorenkamp.pdf.

control technology differed from the SCR technology used by other manufacturers to control NOx emissions. The greencarcongress.com article cited earlier describes it in detail. Instead of having a urea tank, the TDI Clean Diesel cars technology used a trap to collect NOx. While saving the space, weight and cost required by the urea tank in the SCRs, Volkswagen's TDI Clean Diesel technology--when it was operational--required additional use of fuel, thus degrading both gas mileage and performance. The trap was controlled by a computer module that could save fuel by allowing more pollutants to pass through the exhaust system.

52. In June of 2007, six months after Winterkorn took over as CEO of VWAG, Volkswagen issued a report entitled "Power Train and Fuel Strategy--The Path To The Future."[46] It stated:

> In the first stage on the path to this independence, it will be important to utilize existing fossil fuels as efficiently as technically possible. Volkswagen is putting its stamp on this phase with vehicles such as the BlueMotion models, a universally fuel-efficient fleet of TDI engines, highly efficient and unique TSI engines, successful natural gas vehicles (EcoFuel) and a lineup of models that still leaves room for automotive dreams. Very soon these fundamental technologies will be further refined. **New powertrains, including an engine concept developed for use in the USA, under the working title "BlueTDI", are already in the prototype stage. These engines will fulfill the toughest emissions laws in the world – even the so-called "Tier2 Bin5" in California, one of the most stringent emissions standards in the world**. (Emphases added).[47]

53. Volkswagen had planned to introduce the Jetta TDI Clean Diesel in the United States earlier than it eventually did. In November of 2007, it was reported as follows:

> A problem with the emissions system in Volkswagen's new Jetta

[46] It can be found at http://www.volkswagenag.com/content/vwcorp/info_center/en/themes/2007/06/powertrain_and_fuel_strategy.html.

[47] In 2008, five VWAG engineers published a two-part article in the May and June issues of *MTZ* magazine saying they had resolved the issue of how to best control emissions and could now meet California standards through the use in part of a new on-board diagnostics system. Similarly, Achim Freitag, a testing engineer in Volkswagen's diesel development department, touted the new engine in a speech given later that year. *See* http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions/.

VW FOIA, EPA 06/20/2017 2017-FFP_034689

> TDI will delay the launch of the diesel sedan for about six months. The car is critical to VW's plans to get back on track in the United States.
>
> VW spokesman Keith Price confirmed that the delay will be announced this week at the Los Angeles auto show. Price would not give specifics about the technical problem, but he said it has been fixed.
>
> The technical changes engineers made to solve the problem mean the car must go through emissions testing and validation again, Price said.
>
> VW dealers have been without a new diesel car to sell since last spring. Production of the new model, which will be sold in all 50 states, was scheduled to start in January. The car will be built in Puebla, Mexico.
>
> U.S. sales originally were expected to begin in early spring, Price said. Now sales won't start until later in the summer."
>
> "Sure, they're disappointed," Price said of dealers who have learned of the delay.
>
> Price said there is a lot of pent-up demand from loyal VW diesel buyers for the next- generation Jetta, which has a new engine built in Germany and a new diesel fuel injection system.
>
> "They're disappointed, but they see the point that this car has to be perfect," Price said of the dealers, adding, "They recognize the importance of this not only for their stores, but for the VW brand."
>
> A fleet of about 40 Jetta TDIs is undergoing testing as part of the validation procedure.[48]

54. What apparently happened is that the TDI technology failed initially to withstand United States emissions testing. The decision was made to delay the launch of the vehicle and activate the algorithm that functioned as a defeat device in the software management system. Horn confirmed this scenario orally in testimony given to the Subcommittee of Oversight & Investigations of the Energy & Commerce Committee of the United States House of

[48] http://www.cleanmpg.com/forums/showthread.php?t=7254.

VW FOIA, EPA 06/20/2017 2017-FFP_034690

Representatives on October 8 ("October 8 Hearing").[49] This is consistent with the timing of the letter from Bosch described above that raised the illegality of such a tactic. It is also consistent with recent revelations that appeared in the October 4 issue of *Bild am Sonntag*:

> An internal review at Volkswagen AG shows the decision to install software that reduces diesel emissions in testing was made just before serial production of the company's EA 189 engine [used in many of the Affected Vehicles], German tabloid Bild am Sonntag said.
>
> Bild said the software was first installed in its diesel engines in 2008, shortly before the EA 189 was mass produced. The move was taken because there was no way at the time to reconcile meeting emission standards within the targeted cost of the engine, the tabloid said in an advance release of the article to be published Sunday. Otherwise the company would have had to abandon the introduction of the engine, development of which was begun in 2005, the newspaper said.[50]

55. This was not a course of conduct known to only a select few within Volkswagen. As noted in one article:

> The idea that a small group of relatively junior engineers would have done this on their own is not consistent with how engineers build complex, safety-critical systems.
>
> The basic engine management software was written by component supplier Bosch. The responsibility for configuring the software for the EA189 engine would have involved a substantial, multi-disciplinary team of engineers at Volkswagen, working with engineers at the supplier Bosch.
>
> Before the engines could have gone into production, those engineers and their managers would have reviewed and approved the design and calibration of the engine management systems.
>
> They would have also agreed upon, and employed, a systematic testing schedule. This would have involved testing on an engine-only rig, road testing on private grounds as well as testing on public roads.
>
> The anti-pollution engineers would have been responsible for ensuring that the engine management system was sending

[49] His testimony is on video at http://www.c-span.org/video/?328599-1/hearing-volkswagen-emissions-violations.

[50] http://www.marketwatch.com/story/vw-began-using-emissions-software-in-2008-report-2015-10-04.

VW FOIA, EPA 06/20/2017 2017-FFP_034691

> appropriate commands to their components, and that their hardware was responding appropriately.
>
> This kind of exhaustive testing is one of the reasons why developing new vehicle models costs billions of dollars and takes several years.
>
> One possibility is that a large group of Volkswagen engineers conspired to falsify the written records of of this testing.
>
> An alternative scenario is that accurate written testing records were made, showing that the pollution controls were inoperative in normal driving. These accurate records were reported through normal channels, and the engines went into production anyway.
>
> It is very hard to imagine how either event could have occurred without the influence of senior managers.[51]

Horn virtually conceded as much at the October 8 hearing.

56. The 2009 Model Year TDI Jetta was introduced and passed the Tier 2 Bin 5 emissions test with flying colors. A Reuters article describes its successful launch:

> Volkswagen had heavily marketed what it called "clean diesel" engines starting in 2008 with the 2009-model Jetta TDI. It appeared to have found a sweet spot between high-performance and fuel-efficiency with a zippy, fun-to-drive car that topped 40 miles per gallon in highway driving. Named "Green Car of the Year" at the Los Angeles auto show in 2008, the Jetta TDI was seen as a breakthrough in a country where diesel passenger cars occupy a tiny niche compared with Europe, where they are about half of the market.
>
> "It's not your grandfather's diesel," Krause said in a September 2008 presentation to U.S. regulators, according to a video of the remarks.
>
> [Norbert] Krause [head of VWoA's environmental office until 2009] and other VW officials promised a diesel that would meet pollution laws in all states, including California where diesel engines had long been associated with smog and cancer-causing soot.
>
> By that point, VW and other automakers had lobbied for almost a decade for regulators to give diesel another chance. In 2000, VW and other companies with an interest in promoting diesel, including Mazda, formed the Diesel Technology Forum to lobby for increased use in the United States as a way to reduce reliance on imported oil. In 2005, an energy bill signed by President George

[51] http://theconversation.com/where-were-the-whistleblowers-in-the-volkswagen-emissions-scandal-48249.

> W. Bush offered tax credits for diesel buyers. That gave the first wave of diesel Jetta buyers an income tax credit of $1,300 each.
>
> In 2009, after the new Jetta went on sale, VW dealers initially sold out, including in California where regulations had effectively shut the market to diesels earlier in the decade.[52]

57. As noted in the article, *Green Car Journal* gave it the 2009 Green Car of the Year award and gave the TDI Audi A3 the 2010 Green Car of the Year Award.[53] Those awards have been rescinded in light of the present scandal.[54] The TDI Clean Diesels were a resounding success and VWoA sold many units.[55] As recently as its 2014 sustainability report, VWAG crowed about how "[t]he Volkswagen Group has a long tradition of resolute commitment to environmental protection" and how it intended to "put our creative powers to good use for the benefit of the people and the environment."[56]

58. At conferences and in published papers, Volkswagen extolled the efficiency and low emissions of its Clean Diesel technology.[57] And commentators agreed. One stated that Volkswagen was "the only company to have mastered the new emissions regulations using a compact, inexpensive treatment system. It allowed them to roll out diesel engines in one small car

VW FOIA, EPA 06/20/2017 2017-FFP_034693

after another at relatively low prices."[58] Volkswagen's competitors had long wondered how Volkswagen could produce a clean diesel engine at such an affordable price. As Robert Lutz, former vice chairman of General Motors Corporation, recounted: "I kept asking our engineers: 'What's wrong with you guys? VW seems able to do it.' I said, 'Are they magicians or something?' The engineers said they couldn't answer that question."[59] Now, they have their answer. Volkswagen cheated.

59. The competitive advantages of cheating on emissions have now become clear. "Manipulating emissions results allowed Volkswagen to keep down engine costs in a 'clean diesel' strategy that was popular in Europe and at the heart of a drive to improve U.S. results."[60] As an article in the *New York Times* put it, "[d]isabling the emissions controls brought major advantages, including much better mileage--a big selling point in Volkswagen's push to dominate in America."[61] These sales were part of the reason VWAG was able to surpass Toyota as the world's biggest automaker in 2015, as noted above. And they were sales built upon lies.

60. This systemic attitude of winning at all costs in spite of noncompliance with national environmental regulations is part of the corporate culture of Volkswagen, as explained at length in a September 24, 2015 *New York Times* article:[62]

> There is a long tradition of scandal and skulduggery in the auto industry, but few schemes appear as premeditated as Volkswagen's

VW FOIA, EPA 06/20/2017 2017-FFP_034694

brazen move to use sophisticated software to circumvent United States emissions standards.

That such a thing could happen at Volkswagen, Germany's largest company and the world's largest automaker by sales — 202.5 billion euros last year — has mystified consumers and regulators around the world. But given Volkswagen's history, culture and corporate structure, the real mystery may be why something like this didn't happen sooner.

"The governance of Volkswagen was a breeding ground for scandal," said Charles M. Elson, professor of finance and director of the John L. Weinberg Center for Corporate Governance at the University of Delaware. "It was an accident waiting to happen." The company, founded by the Nazis before World War II, is governed through an unusual hybrid of family control, government ownership and labor influence. Even by German standards, "Volkswagen stands apart," said Markus Roth, a professor at Philipps-University Marburg and an expert in European corporate governance. "It's been a soap opera ever since it started."

****

I spoke this week to a longtime former senior Volkswagen executive, who agreed that a scandal, especially one involving emissions, was all but inevitable at Volkswagen. He cited the company's isolation, its clannish board and a deep-rooted hostility to environmental regulations among its engineers.

The former executive, who spoke on the condition of anonymity because he now works at a competing global automaker, said that Wolfsburg, where Volkswagen is based in Lower Saxony and the city with the highest per capita income in Germany, is even more remote and isolated than Detroit was in its heyday. "The entire economy is automotive," he said. "People have a completely uncritical view of cars and their impact on the environment because they all make a living from the industry."

****

The Volkswagen board has been especially slow to move on environmental issues, investing less in electric and hybrid engine technology than industry leaders.

"There's an attitude among the German public that it's very unfair for the U.S. to target the auto industry over emissions," Professor Roth said. "If you have electric cars and a coal-fired plant producing the electricity, you gain nothing."

The former Volkswagen executive said Volkswagen's engineer-driven culture takes the notion even further. He said the engineers felt that the politicians were guilty of rank hypocrisy, especially in

> the United States, also grumbling that electric cars make no sense as long as power plants are burning fossil fuels.
>
> "There's an attitude of moral superiority there," he said. "The engineers think they know best."
>
> That Volkswagen is nonetheless obliged to obey applicable environmental laws, he said, is a notion likely to fall on deaf ears in Wolfsburg, especially compared to demands to be No. 1 in sales. (The motive for the software evasion is widely believed to have been to increase sales of diesel-powered cars in the United States.)

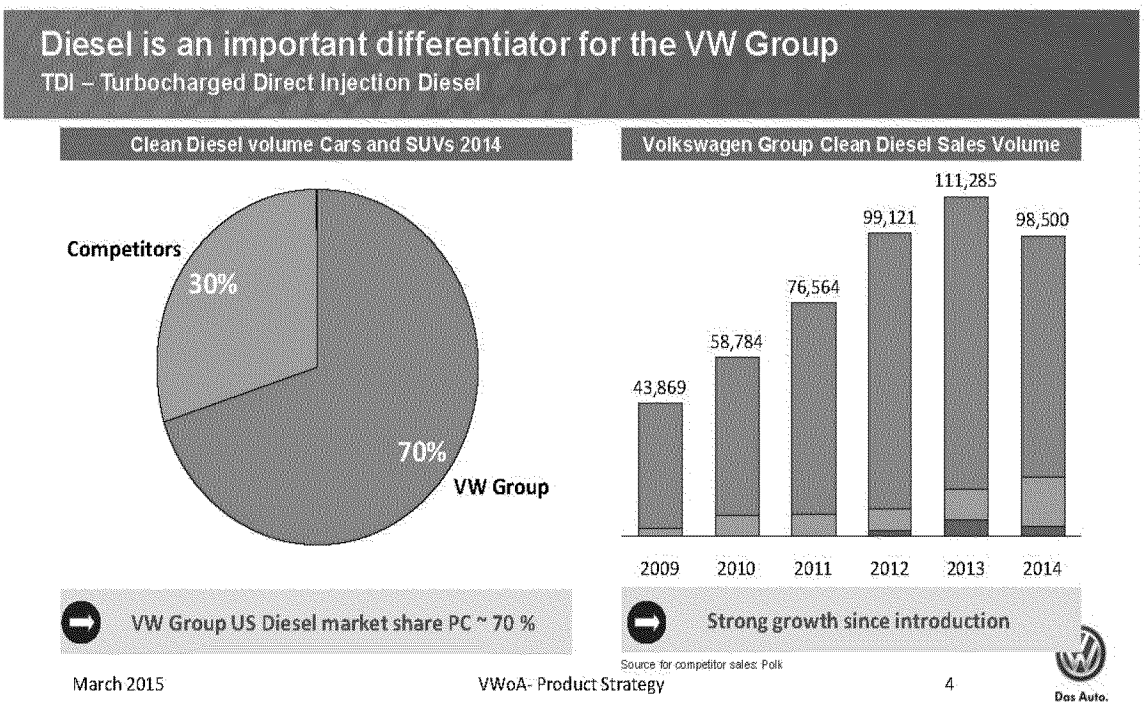
Thus, executives and engineers at Volkswagen were clearly unhappy with United States automotive emissions standards and were all too willing to sacrifice those standards (and their obligations under United States antitrust laws) in order to ensure that their company became the number one automaker in the world. The current scandal involving Volkswagen Clean Diesel TDI vehicles is a direct result of that arrogant intention to flout United States environmental laws. It is also a direct result of what has been described by one German executive as Volkswagen's "uniquely awful" corporate governance.[63]

D. The Clean Diesel Car Market.

61. Volkswagen's illegal conduct in this country occurred in the Clean Diesel passenger car market in the United States (the "Clean Diesel Car Market"), which can be viewed as a market of its own or as a submarket of passenger cars sold in this country. This fact was confirmed in a presentation by Douglas Skorupski ("Skorupski"), Manager of Power Train Strategy for VWoA, given to the Diesel Technology Forum ("DTF") in March of 2015:

[63] http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.

VW FOIA, EPA 06/20/2017 2017-FFP_034696



62. Thus, VWoA clearly views clean diesel cars as a distinct market and Volkswagen's TDI technology as a factor that allowed it to obtain a monopoly share of that market.[64] It distinguished Clean Diesel cars from gasoline/electric hybrid cars based on superior performance:

[64] The presentation can be found at http://cleandieseldelivers.com/media/Douglas-Skorupski-VWoA_DTF_March2015.pdf. Bosch has similarly identified a distinct Clean Diesel car category: http://www.low-carbonfuels.com/pdfs/acte2011presentations/Day1/Breakout1/LightDuty/ACT2011-Breakout1-FreitagAlexPresentation150.pdf. And the EPA has noted that "Clean diesel" refers to a three-part emissions control system that combines cleaner diesel fuel, advanced engines and effective emissions control technology.

"[o]ne way Volkswagen aimed to achieve its lofty goal was by betting on diesel-powered cars — instead of hybrid-electric vehicles like the Toyota Prius--promising high mileage and low emissions without sacrificing performance."[65] Similarly, a survey conducted by Strategic Vision for Volkswagen found that customers of diesel and hybrid vehicles are very different and there is "very little crossover from one to the other."[66] The same article noted that Clean Diesel TDI and hybrid buyers differed demographically; the latter were "were just 51 percent male, 78 percent of them were married, 89 percent had no kids in the household, and their average age was 61", while the former "included far more men than women[,] [f]ewer of them were married, but more of them had children in the house, and they were fully 17 years younger, with an average age of 44." Likewise, a Volkswagen Clean Diesel IQ survey found that diesel car customers are highly aware of the benefits of clean diesel technology in contrast to hybrid and gasoline car customers. Furthermore, 94% of diesel customers will purchase clean diesel cars again while only 26% of hybrid and gasoline car customers will consider clean diesel cars for their next purchase.[67] All of this indicates little cross-elasticity of demand between hybrid vehicles and Clean Diesel vehicles.

63. Indeed, the major European competitors of Volkswagen in the Clean Diesel Car Market belong, along with Volkswagen, to an organization that is devoted to extolling the benefits of Clean Diesel cars.[68]

64. Bloomberg Business noted that consumers are willing to pay a substantial premium

---

[65] http://mobile.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?referer.

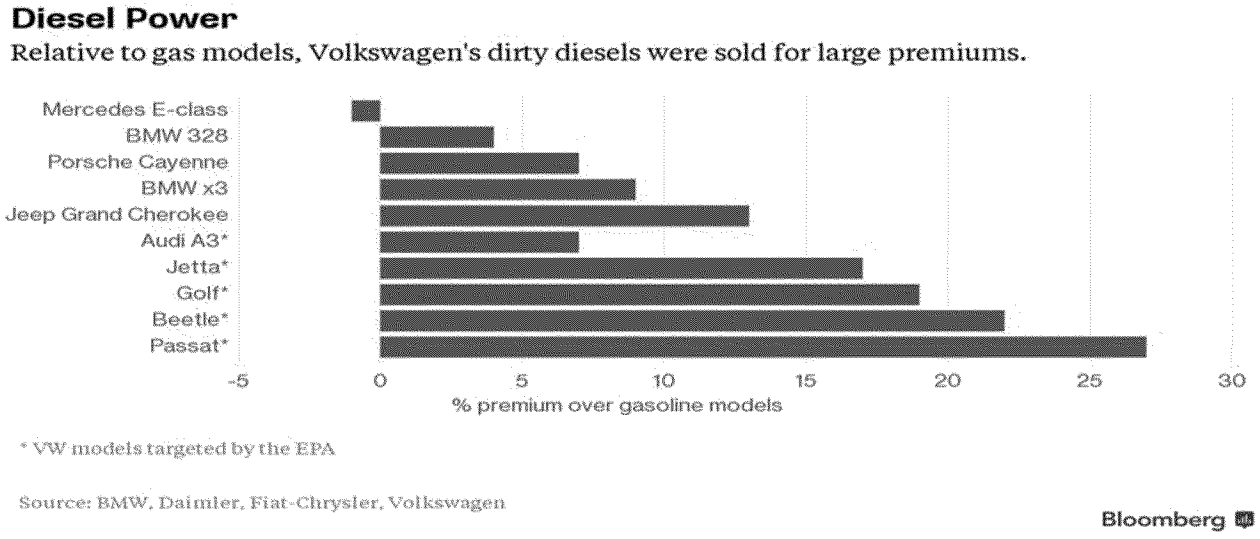
[66] http://www.greencarreports.com/news/1080201_vw-diesel-buyers-hybrid-buyers-both-want-fuel-economy-but-beyond-that.

[67] http://www.autosphere.ca/fleetdigest/2013/04/01/volkswagen-surveys-diesel-drivers/. *See also* http://www.cmu.edu/gdi/docs/diesel-and.pdf (noting many key differences between diesel and hybrid car customers).

[68] http://www.clearlybetterdiesel.org/index.html#cleanDiesel.

VW FOIA, EPA 06/20/2017 2017-FFP_034698

for Clean Diesel vehicles over those of its competitors.[69]



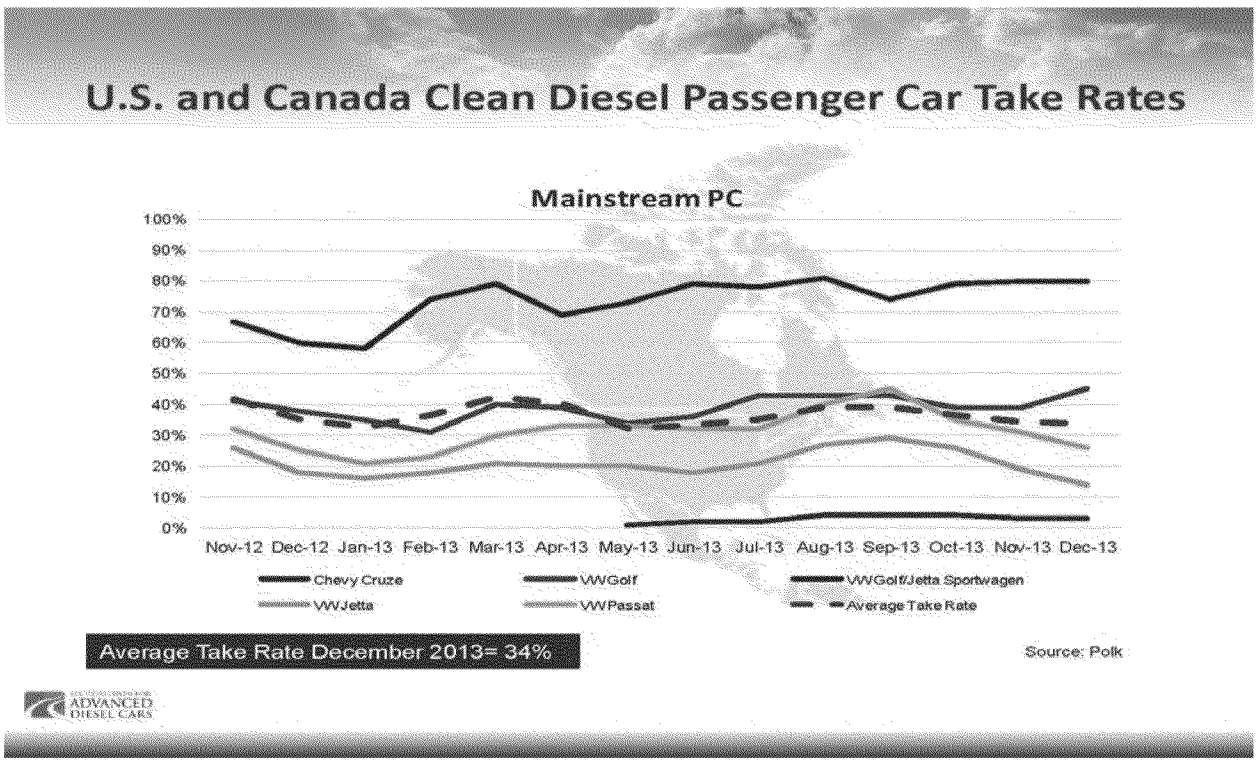
65. As the BloombergBusiness article goes on to explain:

> The math on diesel has never been tidy. The additional mileage is great, but unless one drives a lot, it doesn't really cover the added expense for the engine and for the fuel itself. At current gas prices, the diesel premium on the Passat—some $5,755—would buy enough gas to drive the gas-burning model for about 88,000 miles. **For the majority of diesel drivers, the factor that probably swung the decision was the apparent environmental benefit. The green aspect was the fulcrum**. (Emphases added).

Thus, Volkswagen's false claims about its TDI technology were a driving factor in the premium prices it charged consumers for such technology. As noted above, VWAG has taken full responsibility for the "economic damage" caused by its illegal conduct.

[69] http://www.bloomberg.com/news/articles/2015-09-23/volkswagen-s-other-diesel-ruse-premium-pricing.

66. A chart contained in a presentation made by CMW Research at the March 2015 DTF conference[70] underscores the differences in take rates between Volkswagen Clean Diesel cars and those made by its competitors:



67. The price premium for Clean Diesel vehicles is also reflected in this chart showing the price differentials between gasoline-powered models and Clean Diesel models of Volkswagen's own cars:

Clean Diesel Price Premium				
Mode	**Base**	**Mid-Level**	**Top-Level**	**Average**
VW Jetta	$2,860.00	$1,570.00	$1,030.00	$1,820.00
VW SportWagen	$5,570.00	$1,680.00	$0.00	$2,416.67
VW Golf	$2,400.00	$1,000.00	$1,000.00	$1,466.67
VW Golf	$2,950.00	$1,000.00	$1,000.00	$1,650.00
VW Beetle	$4,635.00	$4,920.00	$0.00	$3,185.00
VW Beetle	$4,080.00	$530.00	$700.00	$1,770.00
VW Passat	$5,755.00	$2,845.00	$2,135.00	$3,578.33

[70] http://cleandieseldelivers.com/media/Take-Rate-Slides-March-2014.pdf.

Audi A3	$2,300.00	$2,300.00	$2,300.00	$2,300.00
Average	$3,818.75	$1,980.63	$1,020.63	$2,273.33

E. Volkswagen's False Advertising.

68. Volkswagen, as part of its plan to increases sales and market share in the United States, increased its emphasis on diesel-powered cars and began marketing these cars heavily to the United States public beginning in 2008. It emphasized the TDI Clean Diesel cars' environment-friendly engine, excellent gas mileage, and high-quality performance. In one advertisement (which, as of this writing, was available on Audi's website after the scandal surfaced and is attached as Exhibit 5 to the Complaint),[71] for example, Volkswagen claimed:

> Getting more from less. Audi pioneered TDI® clean diesel engines to deliver more torque, lower fuel consumption and reduce CO2 emissions, compared to equivalent gasoline engines. The result of this revolutionary engineering delivers remarkable performance, while achieving increased fuel economy.

69. Another advertisement by VWAG for Clean Diesel cars asserts that

> This ain't your daddy's diesel. Stinky, smoky, and sluggish. These old diesel realities no longer apply. Enter TDI Clean diesel. Ultra-low-sulfur fuel, direct injection technology, and extreme efficiency. We've ushered in a new era of diesel.[72]

This internet advertisement is attached as Exhibit 6 to the Complaint.

70. Volkswagen's advertising relentlessly touted the supposed fuel efficiency and environmental features of its Clean Diesel TDI vehicles. In 2009, Volkswagen introduced its "Meet the Volkswagens" campaign, which promoted "fuel efficiency, green credentials, cost of ownership and safety," and compared Volkswagen's diesel passenger cars to its competitors. According to Tim Ellis, Volkswagen's marketing chief, the goal of this advertising campaign was to "grow the brand in the U.S."[73] This campaign, among other things, included social media links

72 https://web.archive.org/web/20150330110301/http://www.vw.com/features/clean-diesel/.

73 http://abcnews.go.com/Business/story?id=7493781.

VW FOIA, EPA 06/20/2017 2017-FFP_034701

to a blog (tdi.vw.com/tdi), which focused on Volkswagen's TDI clean diesel model.

71. Between 2011 and 2013, Volkswagen spent more than $2.9 billion annually on advertising world-wide; many of those advertising dollars were directed at the United States public. Volkswagen issued hugely popular videos featuring the Golden Sisters, who purported to debunk the myths about polluting diesel cars.[74] Other videos that were highly successful included a "Truth or Dare" effort started in 2009 that was about "debunking the myths on clean diesel and fueling the passion of existing diesel owners"; a 2009 Audi video that proclaimed "diesel, no longer a dirty word"; and a Passat "being a Mom" video, all of which can be viewed on the *New York* magazine website.[75] Another well-known video showed German engineers of TDI Clean Diesel vehicles earning their "angel's wings."[76]

72. Volkswagen also used point-of-purchase displays at the showrooms of Volkswagen Authorized Dealers such as the one depicted below:

[74] http://blog.caranddriver.com/vws-hilarious-new-tdi-diesel-ads-return-excellent-viral-mileage/.

[75] http://nymag.com/daily/intelligencer/2015/09/vws-clean-diesel-ads-now-make-us-feel-dirty.html.

[76] https://www.youtube.com/watch?v=fwkPEza9FPw.

73. As VWoA's Mark Barnes put it, the TDI Clean Diesel cars were ''fantastic power train[s]" with "very good fuel economy." Yet "[i]t's also good for the environment because it puts out 25% less greenhouse gas emission than what a gasoline engine would. And thanks to the uniqueness of the TDI motor, it cuts out the particulate emissions by 90% and the emissions of nitrous oxide are cut by 95%. So a very very clean running engine. Clean enough to be certified in all 50 states.''[77]

74. In television and print advertisements and in social media, Volkswagen strived to present its Clean Diesel TDIs as the environmentally-friendly, fuel-efficient, fun-to-drive and reasonably priced passenger car. As noted above, Volkswagen's sham advertising campaign was a success. Unfortunately, all of these accolades were based on a sham perpetrated by Volkswagen for seven years.

F. Volkswagen's Defeat Device.

75. As noted above, Volkswagen's defeat device is described as a "sophisticated software algorithm" that detects when the car is undergoing emissions testing. The algorithm used information about how the car was being steered, how long the engine ran and atmospheric pressure to "precisely track" the conditions that corresponded to a federal emissions test, according to the EPA. During emissions testing, the software "turns on" the car's full emissions control system in order to pass the test. Under normal driving situations, however, these emissions control systems are ***turned off***, allowing the cars to spew as much as 40 times the allowable amount of NOx into the air. As an EPA spokesman noted, the defeat device was "particularly difficult for us to detect."[78] This ruse went undetected for seven years, although as noted above, Bosch and one

[77] http://www.businessinsider.com/volkswagen-preps-for-a-diesel-revolution-2009-10.

[78] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagons-deception-the-recall-that-never-fixed-any-cars/. A useful timeline of how the scandal came to light is provided on the website of Cars.com: https://www.cars.com/articles/vw-diesel-crisis-timeline-of-events-1420681251993/.

VW FOIA, EPA 06/20/2017 2017-FFP_034703

of VWAG's own engineers complained about it to the company.

76. One technology blog has described Volkswagen's defeat device as follows:

> The method by which Volkswagen diesel cars were able to thwart emissions tests and spew up to 40X the nitrogen oxide levels set by the Environmental Protection Agency was relatively simple. It was more likely no more than a single line of code used to detect when an emissions test was being performed and place the emissions system in an alternate mode — something as simple as a software "on/off" switch. Volkswagen AG CEO Martin Winterkorn, who stepping down as the result of his company's scandal, has said he had no knowledge of the emissions cheat, but software dev/test audit trails are almost certain to pinpoint who embedded the code and who authorized it. You can actually see who asked the developer to write that code," said Nikhil Kaul, a product manager at test/dev software maker SmartBear Software. "Then if you go upstream you can see who that person's boss was...and see if testing happened...and, if testing didn't happen. So you can go from the bottom up to nail everyone."[79]

77. As also noted above, 482,000 vehicles were described as affected, with over 50,000 in the state of California.[80] In testimony at the October 8 Hearing, Horn put the number at approximately 525,000 vehicles.

78. In 2013 and again in 2014, the International Council for Clean Transportation ("ICCT") published studies showing serious discrepancies between laboratory and in-use emissions of certain cars, including VW TDI Diesel cars used in Europe.[81] A decision was made to test American Clean Diesel cars to show that they were success stories; the opposite turned out to be the case. The ICCT, in conjunction with researchers at and West Virginia University's Center for Alternative Fuels, Engines and Emissions ("CAFEE") conducted on-road emissions tests on

---

[79] http://developers.slashdot.org/story/15/09/24/1423225/how-did-volkswagen-cheat-emissions-tests-and-who-authorized-it.

[80] http://www.latimes.com/business/autos/la-fi-hy-california-dmv-vw-diesel-20150921-story.html. This number excludes unregistered vehicles.

[81] http://theicct.org/sites/default/files/publications/ICCT_LabToRoad_20130527.pdf; http://www.theicct.org/sites/default/files/publications/ICCT_LaboratoryToRoad_2014_Report_English.pdf)

three vehicles sold in the United States: a 2013 TDI Passat, a 2012 TDI Jetta, and a BMW X5 SUV. These researchers found that for the Passat and Jetta, emissions were far higher than the emissions generated in the laboratory by CARB. The Jetta exceeded United States NOx emissions standard by 15 to 35 times, and the Passat by five to 20 times. In laboratory testing by CARB, in contrast, these same vehicles complied with United States NOx emissions standards. The CAFEE report is attached as Exhibit 7 to the Complaint. ICCT brought the information to the attention of CARB and the EPA, who commenced their own investigations and contacted Volkswagen. Volkswagen chalked the discrepancies up to "various technical issues and unexpected in-use conditions," but agreed in December of 2014 to recall approximately 500,000 vehicles in order to apply a "software patch."[82]

79. After the remediation, CARB in May of 2015 tested a 2012 TDI Passat on the road and in the laboratory. It found some improvement in in-use NOx emissions, but not enough. An article in the *Philly Voice* describes what happened next.

> On July 8, CARB shared its results with VW, but there was no change in Volkswagen's position. Some officials privately questioned whether Volkswagen was deliberately violating the federal Clean Air Act by installing defeat devices -- software programmed to switch engines to a cleaner mode during official emissions testing, according to a person involved in the process.
>
> During normal driving, the software then shuts off, enabling cars to emit as much as 40 times the legal limit of pollutants.
>
> In early August, Oliver Schmidt, who followed [Norbert] Krause and preceded [Stuart] Johnson in VW's U.S. engineering and environmental office, attended a conference in Traverse City, Michigan and told regulators Volkswagen stood by its conclusions that the problem was technical, people involved said.[83]

80. Then, on August 21, there was a complete reversal. The *Philly Voice* article goes on to describe what happened:

> After more than a year of stonewalling investigators, Volkswagen stunned two senior officials with the U.S. Environmental

[82] http://www.cnbc.com/2015/09/24/.

[83] http://www.phillyvoice.com/year-stonewalling-volkswagen-stunned-regulators/.

VW FOIA, EPA 06/20/2017 2017-FFP_034705

> Protective Agency and California's environmental watchdog by admitting the automaker hacked its own cars to deceive U.S. regulators about how much their diesel engines pollute.
>
> That disclosure on Aug. 21, confirmed by two people with knowledge of the exchange, shows Volkswagen buckled to pressure from environmental regulators almost a month earlier than the scandal was made public. The admission to regulators came after a year during which VW officials insisted to regulators that tests on its diesel cars showing a spike in pollution levels on the road were in error.
>
> ****
>
> At first, regulators were surprised that Volkswagen would make its confession at the conference, held in Pacific Grove, California. Minutes before Christopher Grundler, director of the EPA's transportation and air quality office, was to deliver a 9 a.m. speech to the conference, a Volkswagen representative told him about the deception. At the same meeting, representatives of the California Air Resources Board, a state agency that had been pushing VW hard, were also given a verbal notice of the deception, people with knowledge of the events said.
>
> Volkswagen declined to comment on the sequence of events described to Reuters. It isn't clear which VW representative delivered the news of the deception to Grundler and the CARB. Stuart Johnson, head of VW's engineering and environmental office in the United States, was registered to attend the Aug. 21 conference, which was organized by the University of California, Davis. Johnson, who still works for VW in Auburn Hills, Michigan, did not respond immediately to a request for comment.

81. On September 3, Volkswagen officials further laid out the use of the defeat device to regulatory representatives.[84]

82. Volkswagen was faced with the threat that the EPA it would not certify any of its 2016 models for sale in the United States until the questions surrounding the emissions discrepancies were answered. Volkswagen admitted that it relied upon a "second calibration" in the vehicles that was intended to run only during certification testing. This second calibration was triggered when a highly sophisticated software algorithm determined – after measuring factors like the position of the steering wheel, the vehicle's speed, pedal movement, and even barometric

[84] http://docs.house.gov/meetings/IF/IF02/20151008/104046/HHRG-114-IF02-Wstate-HornM-20151008.pdf.

pressure – that the car was being tested. Then it would configure the engine to reduce emissions of NOx. As David Clegern of CARB explained, "[w]e met with VW on several occasions and they continued to dispute our data, so we'd return to the lab. Over time, VW had no other explanations left, and it was our lab staff who actually got VW to admit that there was, in fact, a defeat device."[85] As another CARB spokesperson told the *Washington Post*, "[t]hey basically ran out of excuses."[86]

83. The scandal surfaced on September 18, 2015, when CARB and the EPA announced that VWAG, Audi and VWoA had illegally installed emissions testing "defeat devices" in the aforementioned vehicles. *See* Exhibits 1 and 2. The EPA found violations of 42 U.S.C. §§7522(a), 7522(a)(1) and 7522(a)(3)(B), as well as 40 C.F.R. §§86.1854-12(a)(3)(ii) and 86.1854-12(a). The EPA identified the following affected vehicles:

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGAV02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

84. As noted above, Horn of VWoA admitted that Volkswagen was dishonest with both

[85] http://www.foxnews.com/leisure/2015/09/22/for-7-years-vw-software-thwarted-pollution-regulations/.

[86] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagonsdeception-the-recall-that-never-fixed-any-cars/.

customers and regulators and Huber of VWAG called the matter a "moral and political disaster."

85. Volkswagen has ordered its dealers to cease selling the Affected Vehicles[87] and has set aside a minimum of 6.5 billion Euros ($7.2 billion) to deal with the fallout from this catastrophe, which it now concedes involved 11 million vehicles worldwide. An internal memorandum issued on September 22 details this:

Wolfsburg, 22 September 2015

Volkswagen AG has issued the following information:

Volkswagen is working at full speed to clarify irregularities concerning a particular software used in diesel engines. New vehicles from the Volkswagen Group with EU 6 diesel engines currently available in the European Union comply with legal requirements and environmental standards. The software in question does not affect handling, consumption or emissions. This gives clarity to customers and dealers.

Further internal investigations conducted to date have established that the relevant engine management software is also installed in other Volkswagen Group vehicles with diesel engines. For the majority of these engines the software does not have any effect.

Discrepancies relate to vehicles with Type EA 189 engines, involving some eleven million vehicles worldwide. A noticeable deviation between bench test results and actual road use was established solely for this type of engine. Volkswagen is working intensely to eliminate these deviations through technical measures. The company is therefore in contact with the relevant authorities and the German Federal Motor Transport Authority (KBA – Kraftfahrtbundesamt).

To cover the necessary service measures and other efforts to win back the trust of our customers, Volkswagen plans to set aside a provision of some 6.5 billion EUR recognized in the profit and loss statement in the third quarter of the current fiscal year. Due to the ongoing investigations the amounts estimated may be subject to revaluation.
Earnings targets for the Group for 2015 will be adjusted accordingly.

Volkswagen does not tolerate any kind of violation of laws whatsoever. It is and remains the top priority of the Board of Management to win back lost trust and to avert damage to our customers. The Group will inform the public on the further progress of the investigations constantly and transparently.

86. Volkswagen has indicated it will initiate a recall and remediation of the Affected Vehicles, but there is no "fix" that can be achieved that would not result in lesser mileage per gallon or degraded performance, two of the key attributes on which TDI Clean Diesel cars were

[87] *See* http://pics3.tdiclub.com/data/3209/stop-sale-note3.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_034708

sold.

> Experts Reuters spoke to indicate that two potential fixes could be needed for the two types of emissions control systems featured on 482,000 cars in the U.S., complicating the recall and refit process. Some experts opined that just a software solution could make the affected vehicles compliant with EPA regulations, reducing the performance characteristics of the engines in the process, while others suspect that a hardware solution may be needed for older vehicles without the urea injection system.
>
> A couple of experts warned that the potential solution could involve significantly increased consumption of urea, necessitating fill-ups at more frequent intervals such as every 5,000 miles, in addition to reducing the performance of the engines.[88]

The same point was made by the West Virginia AG in a complaint filed on October 2 against Volkswagen for civil penalties. It is attached as Exhibit 8.[89] In that complaint, the West Virginia AG notes that "Volkswagen will not be able to comply with the EPA [recall] order to make the Affected Vehicles comply with emissions standards without substantially degrading their performance and fuel efficiency to a level below that advertised by Volkswagen, and below that experienced by consumers prior to, or when they purchased their vehicles." Thus, there is no valid "cure" for Volkswagen's conduct.

87. At the October 8 Hearing, Horn testified that the "software solution" might apply to only 95,000 vehicles. Another 430,000 would have to be retrofiired with new hardware, a pricess that could take at least one to two years. Horn also indicated that Volkswagen would not seek certification by environental regulators of its 2016 Model Year diesel cars, due to nondisclosure of an "auxiliary emissions control device."[90]

88. Nor can any recall cure the tarnished reputation of Volkswagen's TDI Clean Diesel

---

[88] http://autoweek.com/article/car-news/vw-diesel-emissions-fix-may-require-2-solutions.

[89] The AG of Texas has also sued Volkswagen. https://www.texasattorneygeneral.gov/files/epress/01_Plaintiffs_Original_Petition_10.8.15.pdf.

[90] http://www.nytimes.com/2015/10/09/business/international/vw-diesel-emissions-scandal-congressional-hearing.html?_r=0.

vehicles and the substantial diminution of their resale value. The Kelley Bluebook has reported that prices for used Volkswagen diesel cars have declined by 21% in the last few weeks, reflecting the aftermath of Dieselgate.[91] Thus, customers not only overpaid when they bought the Affected Vehicles, but have suffered a significant diminution of the resale value of their vehicles. Indeed, a survey of 460 fleet buyers in the United Kingdom revealed that 49% of them were reconsidering their contracts with Volkswagen in the aftermath of the Dieselgate revelations.[92]

89. As noted above, the Executive Committee of the Board that accepted his retirement said that it "recognizes the economic damage caused" as well as the "loss of trust" among customers. No recall and supposed remediation can correct that.

90. A survey of vehicle owners conducted by AutoPacific[93] further reveals consumer disgust with Volkswagen. Only one in four have a positive opinion of Volkswagen, compared to three in four before the scandal. The corresponding figures for Audi were 29%, as opposed to 69%. Sixty-four percent of the survey respondents say they do not trust Volkswagen.

91. Steven Kalafer, a Volkswagen dealer, summed up the public thinking:

> "This fraud makes Madoff look like the minor leagues," Kalafer said from his dealership in Flemington, New Jersey. "It is the biggest fraud I have ever seen in all of business. Over $300 billion of these products have been sold in Europe, $15 billion [in] the United States. That dwarfs Ponzi and Madoff combined."
>
> ****
>
> "Customers are upset. They are upset that the brand they invested in, the brand they counted on, failed them," he said.
>
> ****
>
> "In all of the years that I have been in business, all of the frauds

VW FOIA, EPA 06/20/2017 2017-FFP_034710

that I have seen, this one just takes the cake," he said.[94]

92. But the illegal conduct by Volkswagen has not just resulted in economic damage and loss of consumer trust. It has caused **the death of dozens of people in the United States over the last seven years and degraded the health of many more**. On October 3, Associated Press ("AP") laid out the facts.[95] AP calculated exhaust pollution year by year, starting with the ten to 40 times emissions level estimate by the EPA and then factored in mileage and car number totals from the Kelley Blue Book. It came up with a range of NOx pollution caused by the Affected Vehicles and then took it to scientists who modeled mortality rates, which were confirmed by a dozen experts in emissions, risk and public health, none of whom were environmental advocates or representatives of automobile manufacturers. The results are depicted in the chart that follows.

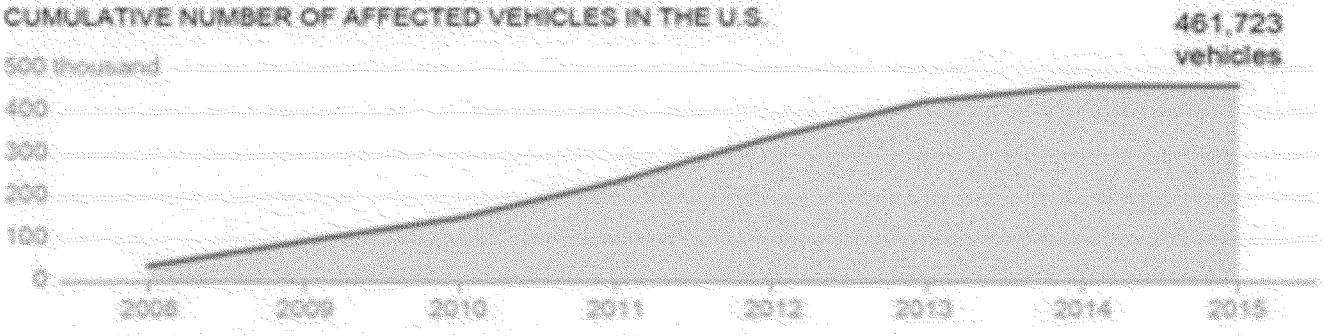
[94] http://www.cnbc.com/2015/10/07/vw-dealers-customers-feel-betrayed-by-emissions-cheating-scandal.html.

[95] http://bigstory.ap.org/article/a6925f0af82e44aaa1a1ed4b55d030f6/ap-analysis-dozens-deaths-likely-vw-pollution-dodge.

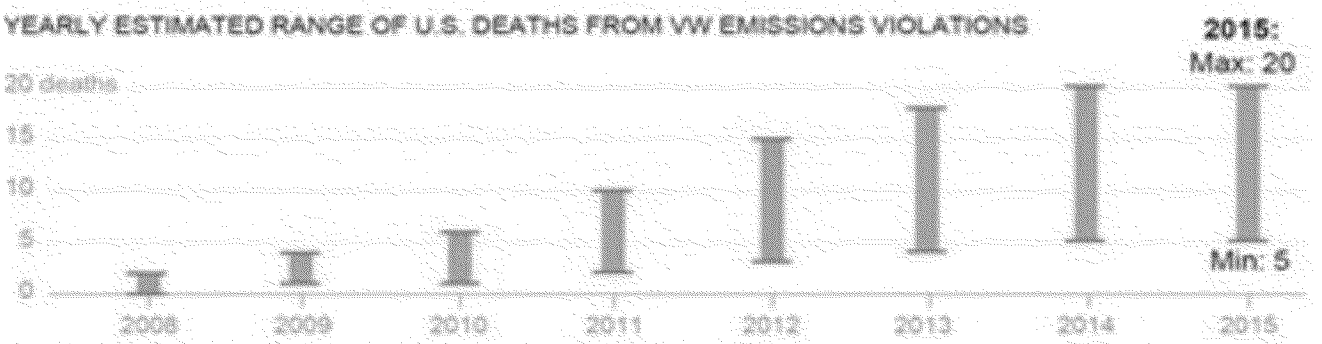
Calculating human toll of VW emissions problems

U.S. pollution resulting from Volkswagen's dodging of emissions tests is enough to have caused dozens of deaths since 2008. An AP analysis calculated upper and lower limits of pollution using the number of affected vehicles each year and average mileage. Scientists used that data in epidemiological computer models to estimate a range of deaths.

CUMULATIVE NUMBER OF AFFECTED VEHICLES IN THE U.S.

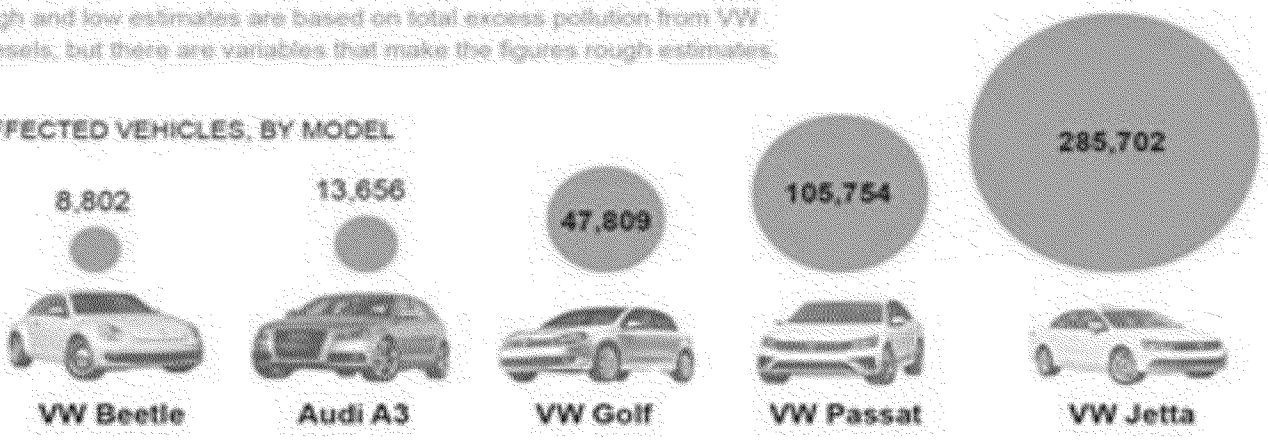


YEARLY ESTIMATED RANGE OF U.S. DEATHS FROM VW EMISSIONS VIOLATIONS



High and low estimates are based on total excess pollution from VW diesels, but there are variables that make the figures rough estimates.

AFFECTED VEHICLES, BY MODEL



NOTE: The total of 47,809 for VW Golf includes 3,530 VW Golf Sportswagen vehicles. The total figure of 461,723 is derived from Kelley Blue Book vehicle registration data. The Environmental Protection Agency estimates the total number of affected vehicles in the U.S. to be about 482,000.

SOURCES: AP analysis of data from the U.S. Environmental Protection Agency and Kelley Blue Book; Professor Peter Adams, Carnegie Mellon; Volkswagen; Audi AP

93. As the AP article notes, the Affected Vehicles spewed enough NOx over the course of seven years to significantly degrade the environment in urban areas. Eric Schneiderman, the New York AG has said that "[t]he stakes could not be higher for the health and safety of our communities who, if Volkswagen's own admissions are true, have for years been breathing air containing excess pollution from their vehicles."[96] Harris County Texas (where the City of Houston is located) has already sued Volkswagen for $100 million in harm to air quality.[97]

94. As noted in the *Minneapolis Star-Tribune* in a follow-up piece on the AP story:

> Computer software allowed VW diesel cars to spew between 10 to 40 times more nitrogen oxides (NOx) than allowed by regulation, making this "clearly a concern for air quality and public health," said Janet McCabe, acting air quality chief for the U.S. Environmental Protection Agency.
>
> Nitrogen oxides mostly form smog — that murky, dirty air that makes it hard to see and for some people to breathe — but also amplify a deadlier, larger problem: tiny particles of soot. Numerous medical studies show those tiny particles cause about 50,000 deaths a year in the United States, mostly from heart problems.
>
> Nitrogen oxides can travel hundreds of miles, so pollution spewed in Pittsburgh can be felt on the East Coast, [Carnegie Mellon environmental engineer Professor Peter] Adams said.
>
> Experts calculate how much pollution costs society by looking at the value of lost lives. In this case, Adams and other said the lost lives — valued at $8.6 million apiece — overwhelm other costs such as lost work days or hospital costs. The overall annual cost of the extra pollutants from the VW diesels ranged from $40 million to $170 million, environmental engineering professors calculated. "Even the small increase in NOx from VW diesel emissions is likely to have worsened pollution along the roadways where they have traveled, and affected the lives of hundreds of thousands of people," said Dan Greenbaum, president of the Health Effects Institute in Boston.

[96] http://mobile.nytimes.com/2015/10/03/business/us-states-jumping-into-investigation-of-vw-emissions-deception.html?_r=0&referer=https://www.google.com/.

[97] http://www.wsj.com/articles/u-s-justice-department-conducts-criminal-probe-of-volkswagen-sources-say-1442869059.

> "To say millions of people of people are breathing poor air as the result of that is not off the mark," said Greenbaum, who runs the institute that is funded by both the EPA and the auto industry to serve as an independent arbiter of the science.[98]

95. The revelation of the scandal has led to numerous consequences in the United States. The DOJ is conducting a criminal probe of Volkswagen.[99] AGs in 30 states have initiated their own investigation.[100] A Texas judge has issued a temporary restraining order preventing the Affected Vehicles from being sold within the state. *See* Exhibit 9 to the Complaint. The Subcommittee of Oversight & Investigations of the Energy & Commerce Committee of the United States House of Representatives has initiated an investigation and sent letters to Volkswagen and the EPA.[101] The Federal Trade Commission launched an investigation after Senator Bill Nelson (D-Fl) urged the agency to look into Volkswagen's marketing of supposedly "clean diesel" vehicles.[102] Leaders of the Senate Finance Committee are also calling for VW to repay over $200 million worth of clean energy tax-credits buyers received as an incentive to purchase clean vehicles.[103] Fred Upton, the chairman of the full committee, has stated that "[t]he very notion of a carmaker intentionally violating our environmental laws is beyond belief….[R]eports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated.

[103] http://www.law360.com/articles/714146/sens-demand-vw-return-200m-in-tax-credits

Attempting to deceive regulators and customers is a double whammy of betrayal."[104] Over 200 private lawsuits have been filed, many of them class actions. Among those class actions, most involve class claims for individual statewide classes, as opposed to federal claims for nationwide classes.

96. Outside the United States, several countries are investigating Volkswagen's conduct.[105] Switzerland has banned the sale within its borders of certain Volkswagen TDI Diesel cars sold in Europe.[106] German prosecutors have raided VWAG's headquarters in Wolfsburg.[107] Prosecutors in Paris have launched an investigation for suspected "aggravated" deception of affected vehicles sold in France; French Environment Minister Segolene Royal called Volkswagen's conduct "a form of theft from the taxpayer and the state."[108] The Italian antitrust authority has also commenced an investigation, saying "Volkswagen's claims about emissions and certifications in advertising campaigns and information brochures distributed by dealers might have induced consumers to make an error in their choice."[109]

97. As noted above, Volkswagen has set aside $7.2 billion to deal with the costs of the scandal. That will not be nearly enough. James E. Tierney, a former AG in Maine, has been quoted as saying that the costs to Volkswagen might be "'incalculable,' with each false

---

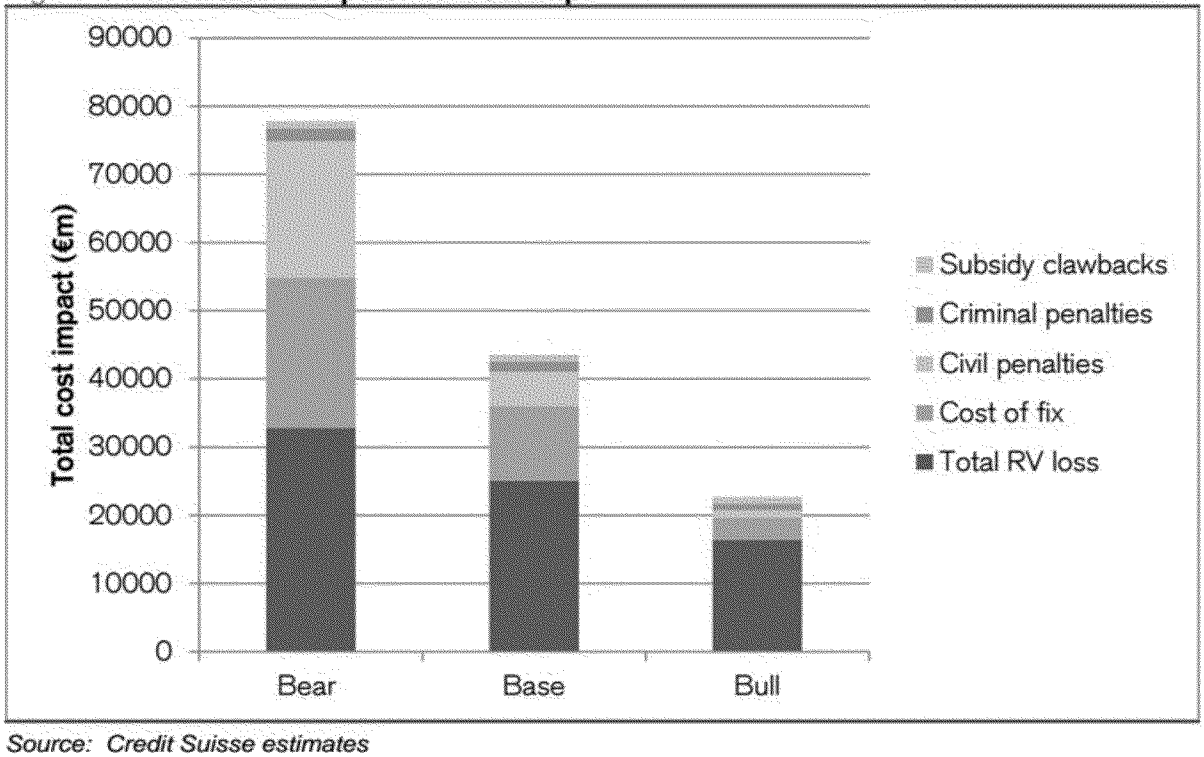
advertisement to consumers, for example, carrying a potential penalty. 'This product was designed to operate illegally, and that is very serious.'"[110]

98. Nonetheless, some attempts at calculation have been made. On October 2, Credit Suisse disseminated an analysis showing Volkswagen's anticipated costs in a "bull" scenario (where events turned out favorably to it), a "base" scenario, and a "bear" scenario (where events turned out unfavorably).[111] The "bull" scenario was $25.6 billion in costs, while the "bear" scenario was $87.1 billion. The analysis is summarized in the following chart:

Figure 17: **Breakdown of potential cost impact for VW**



Source: Credit Suisse estimates

Societe Generale has also presented dire predictions.[112] Volkswagen itself has since conceded that

[110] http://mobile.nytimes.com/2015/10/03/business/us-states-jumping-into-investigation-of-vw-emissions-deception.html?_r=0&referer=https://www.google.com/.

[111] http://www.businessinsider.com/credit-suisse-volkswagen-shares-could-fall-another-20-2015-10?r=UK&IR=T.

[112] http://www.cbsnews.com/news/emissions-scandal-could-cost-volkswagen-more-than-35-billion/.

the cost of Dieselgate will be far more than it initially anticipated.[113] As can be seen, costs associated with criminal and civil penalties make up a significant portion of the differing amounts. Credit Suisse also predicts that Volkswagen's stock may decline another 20%.

VI. PLAINTIFF'S STANDING

99. CAS is a non-profit, Section 501(c)(3) organization whose aim is to provide consumers a voice for auto safety and quality. As such, CAS has standing to bring the present action on its own and on behalf of its members.

ASSOCIATIONAL STANDING

100. CAS's membership consists of approximately 15,000 individuals, including at least 200 in the District of Columbia, 450 in Massachusetts, 1500 in California, and 300 in Michigan. CAS members pay for the benefits of membership, which includes receiving a copy of CAS's annual *Car Book*. The *Car Book* makes recommendations on the best vehicles based on CAS's research of various factors, including fuel economy. CAS members rely on the information CAS gathers to make purchasing decisions when buying a new or used vehicle. In 2013 CAS rated the AUDI A4 as one if it's overall "Best Bets," a rating that would not have been given had CAS known of Defendants' fraudulent reporting of the vehicle's fuel economy. In 2015 it recommended the Volkswagen Jetta. CAS members relied on CAS's recommendations in deciding which vehicle to buy. Had CAS known the true nature of Affected Vehicles' efficiency performance, CAS would not have rated them highly and its members would not have purchased the vehicles.

---

[113] http://www.techtimes.com/articles/92854/20151009/volkswagen-emissions-cheating-scandal-costs-five-times-more-than-expected-ceo-warns-employees-of-cutbacks.htm,

VW FOIA, EPA 06/20/2017 2017-FFP_034717

101. Many of CAS's members would have standing in their own right to bring an action in this case. CAS has identified members who purchased Volkswagen's Clean Diesel vehicles. Any member who purchased an Affected Vehicle has suffered a concrete and particularized injury by purchasing or leasing a vehicle that they would not otherwise have purchased or leased; paying more for vehicles than they would have otherwise paid if they had known the true facts concerning the defeat devices; and purchasing vehicles, the value of which has been severely diminished, thus reducing their residual and/or resale value.

102. Defendants' illegal conduct has injured all members of CAS, regardless of whether or not they purchased an Affected Vehicle, due to Volkswagen's fraudulent scheme to deceive consumers as to the non-compliance of its vehicles to applicable emissions standards, and Volkswagen's pollution of the environment by selling vehicles which emitted NOx gasses in levels ten to forty times permitted by the EPA. These injuries are a direct result of Volkswagen's fraudulent activities.

103. CAS's member's injuries will be redressed by a successful result in this matter through declaratory and injunctive relief because such relief will effectively abate Volkswagen's illegal conduct and will prevent recurrence. Specifically—relief in this matter will eliminate Volkswagen's fraud, bring Affected Vehicles into compliance with emissions standards, and thereby reduce air pollution from the 525,000 Affected Vehicles.

104. The interest CAS is seeking protect in this case is germane to its purpose as an organization. CAS aims to lower vehicle emissions and promote fuel efficiency. CAS's Safe Climate Campaign aims to "slash auto emissions" and "hold polluters . . . accountable." In pursuing this case, CAS is working directly within its mission to reduce fuel emissions and educate the public about energy efficient vehicle choices. A successful outcome in this case will deter

VW FOIA, EPA 06/20/2017 2017-FFP_034718

future vehicle manufacturers from fraudulently manipulating their vehicles' emissions performance.

105. CAS's claims do not require the individual participation of each of its members to obtain the relief that it seeks. CAS only seeks injunctive and/or declaratory relief, not damages on behalf of members. Defendants violated and continue to violate various state and federal laws by fraudulently misrepresenting the Affected Vehicles' emissions, environmental standards, fuel efficiency, and performance. These practices affected all CAS members. CAS can establish the illegality of Defendants' practices through evidence of Defendants' conduct that is common to all members.

ORGANIZATIONAL STANDING

106. CAS also has standing to bring these claims on its own behalf because Defendants' conduct has caused a diversion of its resources and has frustrated its mission. Each year, CAS spends considerable time and financial resources researching and compiling reports on the country's best vehicles, working with automakers and governments to improve the efficiency of motor vehicles and the standards that govern them, and advising members on purchasing decisions. Relying on Volkswagen's misrepresentations, CAS gave the Affected Vehicles high ratings and recommended that its members purchase those vehicles. As a result of Defendants' unlawful activities, CAS will have to divert its financial and staff resources from its planned activities.

107. CAS will have to modify its vehicle ratings system to ensure that vehicles are not circumventing emissions testing procedures to obtain better fuel economy ratings. CAS will have to redirect staff time and financial resources to new mechanisms of vehicle rating for its annual *Car Book*.

108. Through its "Safe Climate Campaign", CAS spent time and resources working to

VW FOIA, EPA 06/20/2017 2017-FFP_034719

increase emissions standards that Defendants' violated. As a result of Defendants' fraud, CAS will now have to divert its time and resources to detect possible future fraudulent actions to subvert emissions standards. CAS will have to divert resources and staff time from current programs to help members of Congress conduct oversight investigations, to develop policy solutions to solve the VW problems, and prevent future frauds. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging consumers to switch to clean cars and to make other clean transportation choices.

109. As a result of defendants' fraud, hundreds of thousands of vehicles have been polluting the atmosphere by circumventing emissions standards. This pollution has undermined CAS's activities to reduce overall air emissions. CAS must work even harder, and devote additional time and resources to its emissions reduction campaigns to reduce overall air emissions as a means of compensating for the excess pollutants the Affected Vehicles continue to spew into the atmosphere.

110. In the absence of Volkswagen's misrepresentations about their vehicles' environmental impact, fuel efficiency, and performance, CAS would not have suffered these injuries.

CAUSES OF ACTION

FIRST CLAIM

Fraudulent Business Acts and Practices in Violation of California Business & Professions Code §§ 17200, *et seq.*

111. Plaintiff incorporates by reference each preceding and succeeding paragraph.

112. Plaintiff brings this cause of action individually and on behalf of its members.

113. California Business and Professions Code §§ 17200, *et seq.* prohibits acts of unfair competition, which mean and include any "fraudulent . . . business practices."

VW FOIA, EPA 06/20/2017 2017-FFP_034720

114. As more fully described above, Defendants' acts and practices with respect to the fuel efficiency, and performance of Affected Vehicles have a tendency to deceive, and have deceived, Plaintiff and its members, thus constituting a fraudulent business act or practice.

115. Defendants acted fraudulently for the purpose of section 17200 by misrepresenting and omitting truths regarding the Affected Vehicles' eco-friendly nature, fuel efficiency, and performance in their advertising, public statements, and marketing. These fraudulent statements were a material factor in inducing CAS members to purchase Affected Vehicles. CAS members suffered injury in fact and lost money and/or property as a result of Volkswagen's unlawful business acts and practices. CAS's members suffered harm when each member was required to pay a purchase price for their Affected Vehicles which they never would have purchased if the true facts were known, or paid a price in excess of what they would have paid had Volkswagen accurately disclosed the Affected Vehicles' characteristics. These misrepresentations also resulted in higher purchase prices for the Affected Vehicles and will result in lower resale value. CAS members suffered injury in fact as a result.

116. Defendants' fraudulent statements were a material factor in inducing CAS's ratings and recommendations for Affected Vehicles, and in pursuing particular activities in furtherance of its mission and policy goals. Defendants' fraud caused CAS to inaccurately rate and report on Affected Vehicles. CAS would have used staff time and financial resources differently had Volkswagen accurately disclosed the Affected Vehicles' characteristics. As a result of Defendants' fraud, CAS will now have to divert staff time and financial resources away from its mission and goals to: adjust its rating system so it is able to detect future fraudulent subversions of emissions standards; help members of Congress conduct oversight investigations of Defendants' fraudulent actions; develop policy solutions to solve the VW problems and prevent future frauds; and devote additional resources to reducing emissions to compensate for the additional pollution caused by Volkswagen's actions. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging

VW FOIA, EPA 06/20/2017 2017-FFP_034721

consumers to switch to clean cars and to make other clean transportation choices.

117. Defendants either knew, recklessly disregarded, or should have known that Volkswagen's statements were false, misleading, untrue, deceptive, or likely to deceive or mislead the public, Plaintiff and its members.

118. Plaintiff and its members relied upon Defendants' material omissions, nondisclosures and representations to their detriment.

119. Plaintiff's members have suffered injury in fact and have lost money as a result of defendants' unfair competition and violations of law in that they purchased vehicles for prices that were grossly inflated; they would not have purchased these vehicles had they known the true efficiency and nature of the Affected Vehicles; and they would not have been exposed to pollutants from the Affected Vehicles. Defendants' conduct has caused CAS injury in fact, a diversion of resources, and frustration of its mission. Had plaintiff known the true facts plaintiff would not have rated the Affected Vehicles highly, and would have used its staff time and resources differently with respect to its mission and purpose. Plaintiff is therefore entitled to the relief available under Business and Professions Code §§ 17200, *et seq*., as detailed herein.

SECOND CLAIM
Unlawful Business Acts and Practices in Violation of California Business & Professions Code §§ 17200, *et seq*.

120. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

121. Plaintiff brings this cause of action individually and on behalf of its members.

122. California Business and Professions Code §§ 17200, *et seq*. prohibits acts of unfair competition, which mean and include any "unlawful . . . business practices."

123. As alleged herein, Defendants routinely misrepresented Affected Vehicles' emissions, environmental standards, fuel efficiency, and performance in their advertising, public statements, and marketing.

124. As a result, Defendants' uniform policies, acts, omissions, and practices, among

VW FOIA, EPA 06/20/2017 2017-FFP_034722

others, violate numerous provisions of California statutory and common law including, but not limited to the following:

- Violating the CLRA; and
- Violating California's False Advertising Law.

125. Plaintiff and its members relied upon these material omissions and misrepresentations to their detriment.

126. Plaintiff reserves the right to allege other violations of law that constitute unlawful business acts or practices based upon the above-described conduct. Such conduct is ongoing and continues to this date.

127. Plaintiff's members have suffered injury in fact and have lost money as a result of defendants' unfair competition and violations of law in that they purchased vehicles for prices that were grossly inflated; they would not have purchased these vehicles had they known the true efficiency and nature of the Affected Vehicles; and they would not have been exposed to pollutants from the Affected Vehicles. Defendants' conduct has caused CAS injury in fact, a diversion of resources, and frustration of its mission. Had plaintiff known the true facts plaintiff would not have rated the Affected Vehicles highly, and would have used its staff time and resources differently with respect to its mission and purpose. Plaintiff is therefore entitled to the relief available under Business and Professions Code §§ 17200, *et seq*., as detailed herein.

THIRD CLAIM
Unfair Business Acts and Practices in Violation of California Business & Professions Code §§ 17200, *et seq.*

128. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

129. Plaintiff brings this cause of action individually and on behalf of its members.

130. California Business and Professions Code §§ 17200, *et seq*. prohibits acts of unfair competition, which mean and include any "unfair . . . business practices."

131. Defendants' conduct constitutes "unfair" business acts and practices because

VW FOIA, EPA 06/20/2017 2017-FFP_034723

Defendants' practices have caused and are "likely to cause substantial injury" to Plaintiff and its members which injury is not "reasonably avoidable" by Plaintiff and its members and is "not outweighed" by the practices' benefits to Plaintiff and its members.

132. As more fully described above, Defendants' misrepresentations and omissions in their advertising, public statements, and marketing constitute unfair business acts or practices within the meaning of Cal. Bus. & Prof. Code §§ 17200, *et seq.*, in that the justification for Defendants' conduct is outweighed by the gravity of the consequences to the general public.

133. Defendants had reasonably available alternatives to further their business interests other than by misleading Plaintiff and its members about Affected Vehicles' eco-friendly nature, fuel efficiency, and performance. Indeed, the burden and expense of not installing the "defect device" is infinitesimal in comparison to the negative impact and injury to Plaintiff and its members.

134. Plaintiff and its members could not have reasonably avoided injury because, as more fully described above, Defendants' scheme was designed to keep Plaintiff and its members from knowing the truth about the Affected Vehicles' eco-friendly nature, fuel efficiency, and performance.

135. Defendants' failure to disclose these facts, coupled with the defeat device, made it nearly impossible for Plaintiff and its members to know the true nature of Affected Vehicles' eco-friendly nature, fuel efficiency, and performance.

136. Plaintiff and its members were never in a position to avoid injury, due to Defendants' active concealment of material information.

137. The practice of misrepresenting the eco-friendly nature of the Affected Vehicles, fuel efficiency, and performance deceived Plaintiff and its members into paying for services that were never rendered or the value of which was grossly inflated; making inaccurate recommendations on which products to buy; and focusing its staff time and resources working to increase emissions standards which were being flagrantly violated by Defendants. These actions

VW FOIA, EPA 06/20/2017 2017-FFP_034724

are contrary to public policy, immoral, unethical, oppressive, unscrupulous, and/or substantially injurious to consumers.

138. Defendants' conduct has violated statutory and common law, and the policy and spirit of California's statutory law including, but not limited to, California's Consumer Legal Remedies Act, California's Unfair Competition Law, California's False Advertising Law, and California Pollution Control laws and applicable regulations. These violations significantly harmed Plaintiff and its members.

139. Plaintiff and its members relied upon these material omissions and misrepresentations to their detriment.

140. Plaintiff's members have suffered injury in fact and have lost money as a result of defendants' unfair competition and violations of law in that they purchased vehicles for prices that were grossly inflated; they would not have purchased these vehicles had they known the true efficiency and nature of the Affected Vehicles; and they would not have been exposed to pollutants from the Affected Vehicles. Defendants' conduct has caused CAS injury in fact, a diversion of resources, and frustration of its mission. Had plaintiff known the true facts plaintiff would not have rated the Affected Vehicles highly, and would have used its staff time and resources differently with respect to its mission and purpose. Plaintiff is therefore entitled to the relief available under Business and Professions Code §§ 17200, *et seq*., as detailed herein.

FOURTH CLAIM
Violations of the Consumers Legal Remedies Act
(California Civil Code § 1750 *et seq*.)

141. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

142. This cause of action is brought pursuant to the California Consumers Legal Remedies Act ("CLRA"), Civil Code § 1750, *et seq*.

143. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated,

VW FOIA, EPA 06/20/2017 2017-FFP_034725

and continue to violate California Civil Code § 1770, subdivisions (a)(9), (a)(7), (a)(16), and (a)(5) by:

- Representing to consumers purchasing the Affected Vehicles that these vehicles' eco-friendly nature, fuel efficiency, and high performance are as advertised and publicized.
- Representing in their advertising eco-friendly nature, fuel efficiency, and performance characteristics for the Affected Vehicles that are false.

144. Plaintiff and its members have suffered harm as a result of these violations.

145. Plaintiff's members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Affected Vehicles believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Affected Vehicles and the subsequent revelation concerning these resources would otherwise have been spent in other ways will result in lower resale value. CAS members suffered injury in fact when they were exposed to greater NOx emissions than represented by Volkswagen and permitted by law.

146. Plaintiff suffered harm as a result of Volkswagen's unlawful conduct because it recommended Affected Vehicles in its *Car Book*, and directed staff time and resources in pursuance of activities it would not have pursued had Volkswagen accurately disclosed the Affected Vehicles' characteristics. Plaintiff rated Affected Vehicles, believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in CAS

VW FOIA, EPA 06/20/2017 2017-FFP_034726

having to divert staff time and financial resources away from its mission and goals to: adjust its rating system so it is able to detect future fraudulent subversions of emissions standards; help members of Congress conduct oversight investigations of Defendants' fraudulent actions; develop policy solutions to solve the VW problems and prevent future frauds; and devote additional resources to reducing emissions to compensate for the additional pollution caused by Volkswagen's actions. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging consumers to switch to clean cars and to make other clean transportation choices.

147. Volkswagen concealed from Plaintiff and its members accurate information concerning the emissions standards, fuel efficiency, and performance of the Affected Vehicles.

148. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

149. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

FIFTH CLAIM
Violations of the Michigan Consumer Protection Act
(Mich. Comp. Laws § 445.901 *et seq.*)

150. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

151. Michigan Consumer Protection Act, Mich. Comp. Laws § 445.901 *et seq.* prohibits "[u]nfair, unconscionable, or deceptive methods, acts, or practices in the conduct of trade or commerce."

152. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated, and continue to violate Mich. Comp. Laws § 445.903, subsections (a), (e), and (l) by:

VW FOIA, EPA 06/20/2017 2017-FFP_034727

- Representing to consumers purchasing the Affected Vehicles that these vehicles' eco-friendly nature, fuel efficiency, and high performance are as advertised and publicized.
- Representing in their advertising emissions, environmental, fuel efficiency, and performance characteristics for the Affected Vehicles that are false.
- Representing that the Affected Vehicles were compliant with state and federal emissions regulations.

153. Volkswagen concealed from Plaintiff and its members accurate information concerning eco-friendly nature, fuel efficiency, and performance of the Affected Vehicles.

154. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were made knowingly, and with the intent that consumers would purchase vehicles based on those representations.

155. Plaintiff's members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Affected Vehicles believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Affected Vehicles and the subsequent revelation concerning the "defeat devices" will result in lower resale value. CAS members suffered injury in fact when they were exposed to greater NOx emissions than represented by Volkswagen and permitted by law.

156. Plaintiff suffered harm as a result of Volkswagen's unlawful conduct because it recommended Affected Vehicles in its *Car Book*, and directed staff time and resources in pursuance of activities it would not have pursued had Volkswagen accurately disclosed the Affected Vehicles' characteristics. Plaintiff rated Affected Vehicles, believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made

VW FOIA, EPA 06/20/2017 2017-FFP_034728

them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in CAS having to divert staff time and financial resources away from its mission and goals to: adjust its rating system so it is able to detect future fraudulent subversions of emissions standards; help members of Congress conduct oversight investigations of Defendants' fraudulent actions; develop policy solutions to solve the VW problems and prevent future frauds; and devote additional resources to reducing emissions to compensate for the additional pollution caused by Volkswagen's actions. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging consumers to switch to clean cars and to make other clean transportation choices.

157. Volkswagen concealed from Plaintiff and its members accurate information concerning the emissions standards, fuel efficiency, and performance of the Affected Vehicles.

158. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

159. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

SIXTH CLAIM
Violations of the Massachusetts General Statute 93A
(Mass. Gen. Laws ch. 93A § 1 *et seq.*)

160. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

161. Massachusetts General Statute, Mass. Gen. Laws ch. 93A § 1 *et seq.*, prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce."

162. As more fully described above, Defendants' acts and practices with respect to the fuel efficiency, and performance of the Affected Vehicles have a tendency to deceive, and have

VW FOIA, EPA 06/20/2017 2017-FFP_034729

deceived, Plaintiff and its members, thus constituting unfair, immoral, unethical, oppressive, and unscrupulous actions. These actions included:

- Falsely representing to consumers purchasing the Affected Vehicles that these vehicles' emissions, fuel efficiency, and high performance are as advertised and publicized.
- Falsely representing in their advertising emissions, environmental, fuel efficiency, and performance characteristics for Affected Vehicles that are false.
- Falsely representing that the Affected Vehicles were compliant with state and federal emissions regulations.

163. Volkswagen concealed from Plaintiff and its members accurate information concerning the emissions standards, fuel efficiency, and performance of the Affected Vehicles.

164. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were made knowingly, and with the intent that consumers would purchase vehicles based on those representations.

165. Plaintiff's members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Affected Vehicles believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Affected Vehicles and the subsequent revelation concerning the "defeat devices" will result in lower resale value. CAS members suffered injury in fact when they were exposed to greater NOx emissions than represented by Volkswagen and permitted by law.

166. Plaintiff suffered harm as a result of Volkswagen's unlawful conduct because it recommended Affected Vehicles in its *Car Book*, and directed staff time and resources in pursuance of activities it would not have pursued had Volkswagen accurately disclosed the

VW FOIA, EPA 06/20/2017 2017-FFP_034730

Affected Vehicles' characteristics. Plaintiff rated Affected Vehicles, believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in CAS having to divert staff time and financial resources away from its mission and goals to: adjust its rating system so it is able to detect future fraudulent subversions of emissions standards; help members of Congress conduct oversight investigations of Defendants' fraudulent actions; develop policy solutions to solve the VW problems and prevent future frauds; and devote additional resources to reducing emissions to compensate for the additional pollution caused by Volkswagen's actions. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging consumers to switch to clean cars and to make other clean transportation choices.

167. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, Plaintiff and members of the consuming public will be further damaged by Volkswagen's conduct.

SEVENTH CLAIM

Violations of the District of Columbia Consumer Procedures Protection Act (DC Code § 28-3901 *et seq.*)

168. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

169. This cause of action is brought pursuant to the District of Columbia Consumer Procedures Protection Act, DC Code § 28-3901 *et seq.*

170. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated, and continue to violate California Civil Code § 28-3904, subdivisions (a), (b), (e), (f), and (x) by:

- Representing to consumers purchasing the Affected Vehicles that these vehicles'

VW FOIA, EPA 06/20/2017 2017-FFP_034731

emissions, fuel efficiency, and high performance are as advertised and publicized.

- Representing in their advertising emissions, environmental, fuel efficiency, and performance characteristics for the Affected Vehicles that are false.
- Representing that the Affected Vehicles were compliant with federal emissions regulations when they were not.

171. Plaintiff and its members have suffered harm as a result of these violations.

172. Plaintiff's members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Affected Vehicles believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Affected Vehicles and the subsequent revelation concerning the "defeat devices" will result in lower resale value. CAS members suffered injury in fact when they were exposed to greater NOx emissions than represented by Volkswagen and permitted by law.

173. Plaintiff suffered harm as a result of Volkswagen's unlawful conduct because CAS recommended Affected Vehicles in its *Car Book*, and directed staff time and resources in pursuance of activities it would not have pursued had Volkswagen accurately disclosed the Affected Vehicles' characteristics. Plaintiff rated Affected Vehicles, believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in CAS having to divert staff time and financial resources away from its mission and goals to: adjust its rating system so it is able to detect future fraudulent subversions of emissions standards; help members of Congress conduct oversight investigations of Defendants' fraudulent actions; develop

VW FOIA, EPA 06/20/2017 2017-FFP_034732

policy solutions to solve the VW problems and prevent future frauds; and devote additional resources to reducing emissions to compensate for the additional pollution caused by Volkswagen's actions. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging consumers to switch to clean cars and to make other clean transportation choices.

174. Volkswagen concealed from Plaintiff and its members accurate information concerning the emissions standards, fuel efficiency, and performance of the Affected Vehicles.

175. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

176. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray that the Court enter judgment on its behalf and on behalf of its members, and:

A. Order the appointment of an independent organization to be External Compliance Monitor to monitor Volkswagen's compliance with federal and state environmental laws, as well as any other relief granted in the ultimate resolution of this case, and provide reports annually to the Court for a period no less than five years;

B. Order Volkswagen to pay a portion of its annual net profits into an independent fund administered by third parties approved by the Court who can disburse the funds to non-profit organizations that seek to monitor, educate people about, and/or remediate the deleterious environmental effects of vehicular diesel fuel emissions through advanced emissions controls and systems;

C. Adjudge and decree that Volkswagen has violated the California Pollution Control

VW FOIA, EPA 06/20/2017 2017-FFP_034733

Laws, California Business & Professions Code, the California Civil Code, the Michigan Consumer Protection Act, and Massachusetts General Statute 93A and that Plaintiffs and its members have been injured in their business and property as a result of Volkswagen's violations;

D. To the extent provided by law, enjoin and restrain Volkswagen, its subsidiaries, affiliates, successors, transferees, assignees and the respective officers, directors, partners, agents, and employees thereof and all other persons acting or claiming to act on their behalf from continuing to violate the California Pollution Control laws, California Business & Professions Code, the California Civil Code, the Michigan Consumer Protection Act, and Massachusetts General Statute 93A.

E. Award Plaintiffs and its members their costs of this suit, including reasonable attorneys' fees as provided by law; and

F. Order such other or further relief as may be just and proper.

IX. JURY TRIAL DEMAND.

Pursuant to Federal Rule of Civil Procedure 38(b), Plaintiffs demand a trial by jury of all of the claims asserted in this Complaint so triable.

DATED: October 16, 2015 Respectfully submitted,

By: _____

FILED

2015 OCT 16 P 3:29

CLERK US DISTRICT COURT
ALEXANDRIA, VIRGINIA

IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF VIRGINIA
Alexandria Division

THE CENTER FOR AUTO SAFETY Plaintiff, v. VOLKSWAGEN AG, VOLKSWAGEN OF AMERICA GROUP, INC., VOLKSWAGEN OF AMERICA, INC., AUDI OF AMERICA, LLC, and AUDI AG, Defendants.	Case No. 1:15 cv 1356 (LO/MSN) JURY TRIAL DEMANDED

COMPLAINT

Plaintiff The Center for Auto Safety ("CAS") brings this action on its own behalf and on behalf of its members against Volkswagen AG ("VWAG"), Volkswagen of America Group, Inc. and Volkswagen of America, Inc. (collectively, "VWoA"), and Audi of America, LLC and Audi AG (collectively, "Audi").[1] Plaintiff seeks injunctive and declaratory relief for Volkswagen's violations of the the California Unfair Competition Law, the California Consumer Legal Remedies Act, the Michgan Consumer Protection Act, Massachusetts General Law chapter 93A, and the District of Columbia Unlawful Trade Practices Act. Plaintiffs make the following allegations upon information and belief.

I. NATURE OF THE ACTION.

1. Four years ago, Martin Winterkorn ("Winterkorn"), Volkswagen's former Chief Executive Officer ("CEO"), announced Volkswagen's goal to become the world's largest

[1] Unless otherwise indicated herein, all of these defendants will be referred to collectively as "Volkswagen."

automaker. "By 2018," he told U.S. politicians gathered for the opening of a Volkswagen plant in Chattanooga, Tennessee, "we want to take our group to the very top of the global car industry."[2] With only a relatively small share of the gigantic United States market, Winterkorn's ambitious plan required a dramatic increase in sales in that market. And the way to increase sales here, Volkswagen decided, was to convince American consumers that its diesel-powered cars were a superior alternative, with better fuel efficiency, lower emissions, and uncompromised performance.

2. Between 2009 and September 18, 2015, Volkswagen aggressively marketed its so-called Clean Diesel Turbocharged Direct Injection ("TDI") light passenger vehicles in the United States, spending millions of dollars on print, television, internet and point-of-sale advertising aimed at convincing American consumers that its cars were environmentally-friendly, fuel-efficient, powerful, and reasonably priced. In order to increase its market share, Volkswagen's cars needed all those attributes to win over a skeptical American public. Compared with Europe, with its higher fuel costs, expensive cars and less stringent tailpipe emission standards, the United States market was a tough sell for diesel-powered passenger cars.

3. Until September 18, 2015, it looked as if Winterkorn's ambitious plan had succeeded. In July of 2015, Volkswagen surpassed Toyota Corporation ("Toyota") as the world's largest automaker, selling 5.04 million vehicles in the first six months of this year, compared to Toyota's 5.02 million.[3]

4. As noted above, the United States was a key part of this global strategy. As reported in *Automotive News*:

> Back in 2007, the automaker vowed to crank up U.S. sales of its VW brand to 800,000 vehicles a year by 2018. It was a dizzying

[2] http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

[3] http://www.usatoday.com/story/money/2015/07/28/volkswagen-surpasses-toyota-worlds-largest-automaker-first-half-2015/30772509/.

VW FOIA, EPA 06/20/2017 2017-FFP_034737

> sum, requiring more than a tripling of its volume at that time. Many in the industry scoffed.
>
> But with steady precision, VW got the skeptics to take a second look. It launched a lower-priced, Mexico-made Jetta and built a plant in Chattanooga that began churning out a new Passat that better fit American tastes and budgets. VW sales doubled between 2009 and 2012, to nearly 440,000, lifting hopes that 800,000 was doable.[4]

By October 1, 2015, VWoA had reported sales of 264,215 passenger vehicles in the United States through September 15, indicating that before the scandal that is the subject of this Complaint surfaced, it was expecting another excellent sales year.[5]

5. Indeed, Volkswagen was so successful in achieving brand loyalty in the clean diesel market, consumers are now left with few options for purchasing comparable vehicles and are left with the dilemma of remaining loyal to Volkswagen or looking for a different type of vehicle. As the New York Times recently reported:[6]

> "There's a bit of a hole in the marketplace," Ms. Caldwell said. "Other vehicles certainly could be substituted, but there aren't a lot of affordable fun-to-drive diesels out there."
>
> Other fuel-efficient and earth-friendly options are also significantly more expensive. VW's diesel technology has been the market's most affordable, adding as little as $700 to the price of a conventional gasoline model.

6. Unfortunately for American consumers, Volkswagen's success in capturing market share was based on a lie. On September 18, 2015, the United States Environmental Protection Agency ("EPA") and the California Air Resources Board ("CARB") both notified Volkswagen that it had violated federal and state laws and regulations by using a "defeat device"--software

---

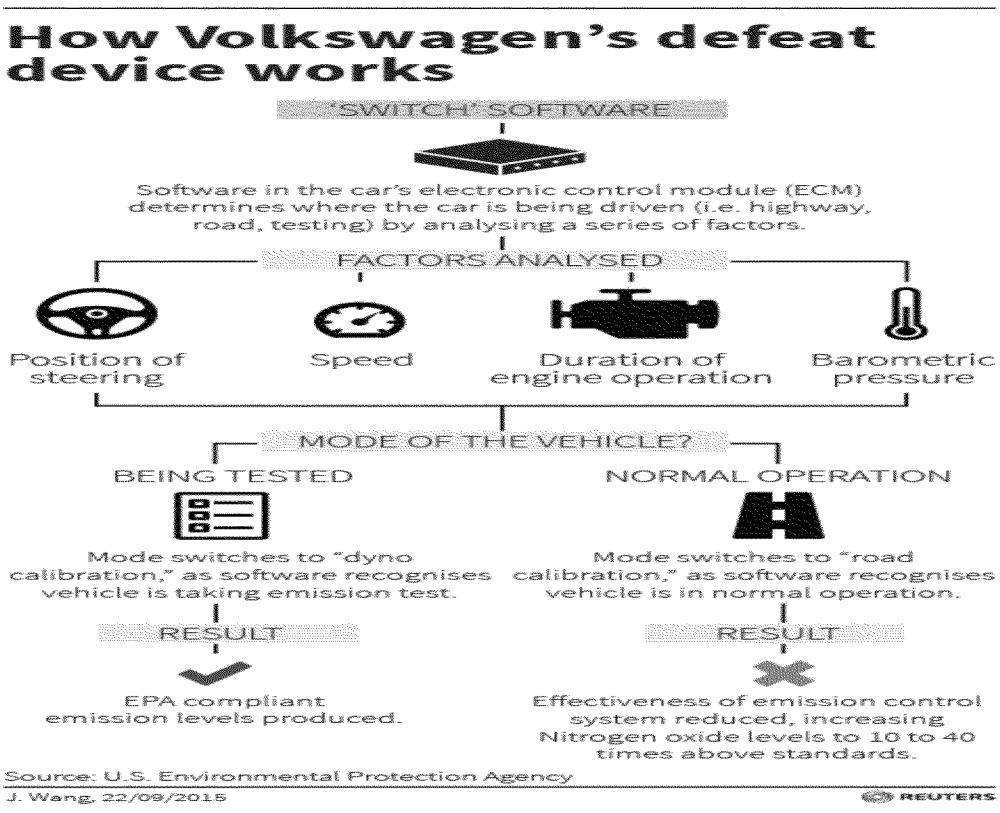
[4] http://www.autonews.com/article/20150126/RETAIL01/301269949/how-vw-veered--off-target.

[5] http://media.vw.com/release/1080/.

[6] http://www.nytimes.com/2015/10/09/automobiles/with-vw-no-longer-an-option-diesel-buyers-have-few-choices.html?smprod=nytcore-iphone&smid=nytcore-iphone-share&_r=0

specifically intended to circumvent emission test procedures established by the EPA and by CARB. Those notices are attached as Exhibits 1 and 2 to this complaint.

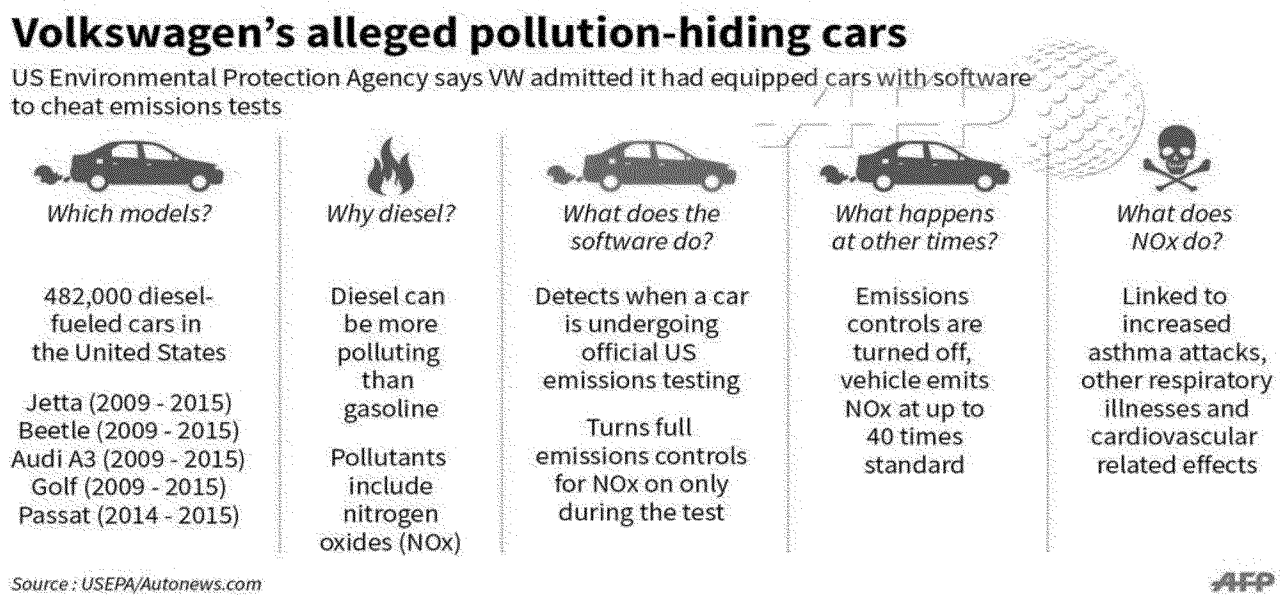
7. Volkswagen's "defeat device" is a "sophisticated software algorithm"[7] that detects when the car is undergoing emissions testing. Under such laboratory test conditions, Volkswagen's vehicles pass the EPA and CARB emissions tests with flying colors. Under normal driving situations, however, the software algorithm ***turns off*** the emissions control systems, allowing the cars to spew as much as 40 times the allowable amount of pollutants--specifically nitrogen oxides ("NOx")--into the air. Elevated NOx contributes to the creation of ozone and smog, and is linked to asthma attacks, other respiratory diseases such as emphysema and bronchitis, and causes premature death. A diagram published in Reuters depicts its operation:



[7] http://www.theguardian.com/business/2015/sep/18/epa-california-investigate-volkswagen-clean-air-violations.

VW FOIA, EPA 06/20/2017 2017-FFP_034739

8. The chart below, published by *Agence France Press*, provides a useful and concise primer on the known facts:



9. As noted below, dozens of fatalities in the United States over the last seven years have been attributed to the illegal use of this "defeat device." The scandal has been popularly referred to as "Dieselgate."

10. Volkswagen has admitted to installing these "defeat devices" in 11 million diesel vehicles that have been sold around the world, including 525,000 in the United States. As Michael Horn ("Horn"), the President and CEO of VWoA, candidly admitted: "[l]et's be clear about this. **Our company was dishonest. With the EPA, and the California Air Resources Board, and with all of you. And in my German words, we have totally screwed up.**"[8] (Emphases added). Horn further stated in a video on VWAG's website that **"[o]ur company betrayed the trust of you, our customers, our employees, our dealers and the public."**[9] (Emphases added). And as

[8] http://www.roadandtrack.com/new-cars/car-technology/news/a26774/volkswagen-ceo-we-screwed-up/. A YouTube video of this extraordinary concession can be found here: www.youtube.com/watch?v=Q6z8uUJE-jE.

[9] https://www.vwdieselinfo.com/.

VWAG has posted on its website: "[g]overnment regulations limit the use of engine software that reduces the effectiveness of a vehicle's emissions control systems. **Those are the 'defeat device' regulations, and regrettably, VW violated those regulations. We take full responsibility** – and deeply regret that this happened."[10] (Emphases added). In a September 23, 2015 press release available on VWAG's website, the Executive Committee of VWAG's Supervisory Board stated: "[t]he Executive Committee takes this matter extremely seriously. **The Executive Committee recognizes not only the economic damage caused, but also the loss of trust among many customers worldwide.**"[11] (Emphases added). Or, as Berthold Huber ("Huber"), Deputy Chairman of the Supervisory Board, was quoted as saying in a September 25 press release, **"[t]he test manipulations are a moral and political disaster for Volkswagen. The unlawful behavior of engineers and technicians involved in engine development shocked Volkswagen just as much as it shocked the public.**" [12] (Emphases added).

11. In light of the scandal, VWAG's Management Board forced Winterkorn to resign as CEO of VWAG on September 23.[13] In doing so, he stated that "**I accept responsibility for the irregularities that have been found in diesel engines.**" (Emphases added). [14] He further observed that "**[m]illions of people across the world trust our brands, our cars and our**

[13] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html

[14] http://www.nytimes.com/2015/09/24/business/international/volkswagen-chief-martin-winterkorn-resigns-amid-emissions-scandal.html. Notably, however, Winterkorn plans to stay as the Chairman of the Board of Directors of Porsche Automobil Holding SE, which owns a 52% controlling stake in VWAG; he is also still demanding payment of the ten million Euros owed to him under his employment contract, which does not expire until 2016. http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

technologies. I am endlessly sorry that we have disappointed this trust. I apologize in every way to our customers, to authorities and the whole public for the wrongdoing." [15] (Emphases added). He professed surprise that "**misconduct on such a scale**" (emphases added) occurred within the Volkswagen group, suggesting that he had no knowledge of it.[16] It has been reported that Winterkorn was being investigated for fraud in connection with the conduct at issue here by prosecutors in Lower Saxony; however, more recently, those prosecutors have stated that any prosecution will await further factual information.[17]

12. Volkswagen has ordered its authorized dealers ("Volkswagen Authorized Dealers") to cease selling the vehicles in which the defeat devices are installed. These include at least the VW Jetta TDI (Model Years 2009-15), the VW Jetta SportWagen TDI (Model Years 2009-14), the VW Golf TDI (Model Years 2010-15), the VW Golf SportWagen TDI (Model Year 2015), the VW Beetle TDI and VW Beetle Convertible TDI (Model Years 2012-15), the VW Passat TDI (Model Years 2012-15) and the Audi A3 TDI (Model Years 2010-15).[18] These affected vehicles will be referred to in this Complaint as the "Affected Vehicles."

13. Volkswagen's internal investigation has resulted so far in the suspension of four executives: (a) Heinz-Jakob Neusser ("Neusser"); (b) Ulrich Hackenberg ("Hackenberg"); (c) Wolfgang Hatz ("Hatz") and (d) Falko Rudolph (Rudolph).[19] Spiegel Online described

Hackenberg's departure, which was also typical of the others: "[h]e received news of his immediate suspension from the personnel department and was asked to turn in his company phone and leave his office. He has also been told not to set foot on company premises."[20]

14. None of these people are mere obscure midlevel engineers. Hackenberg is a VWAG Board member for Technical Development.[21] The same Spiegel Online article described Hackenberg as "a long-time confidant of Winterkorn and, up until just a few days ago, one of the most powerful men at VW." Hatz is a Porsche AG ("Porsche") Board of Management member in charge of Research and Development and is additionally Head of Engines and Transmissions Development for the Volkswagen Group.[22] Neusser was responsible for engine development at Porsche commencing in 1998 and drivetrain development commencing in 2011; in October of 2012, he succeeded Hatz as Head of Powertrain Development at the Volkswagen Group.[23]

15. The same Spiegel Online article notes that Hans-Dieter Pötsch ("Pötsch"), the VWAG Finance Chief and Board Chairman of VWAG, may also be under investigation by regulatory authorities. As discussed below, Volkswagen told the EPA about the use of a defeat device on September 3 (if not earlier), but disclosed it to investors only on September 20. "[T]he finance chief remained silent for 17 days. During these 17 days, hundreds of thousands of investors bought VW stock. When the scandal was finally made public on Sept. 20, the price of VW shares plunged by 40 percent, costing stockholders €35 billion."[24] VWAG's shares have been on a steady

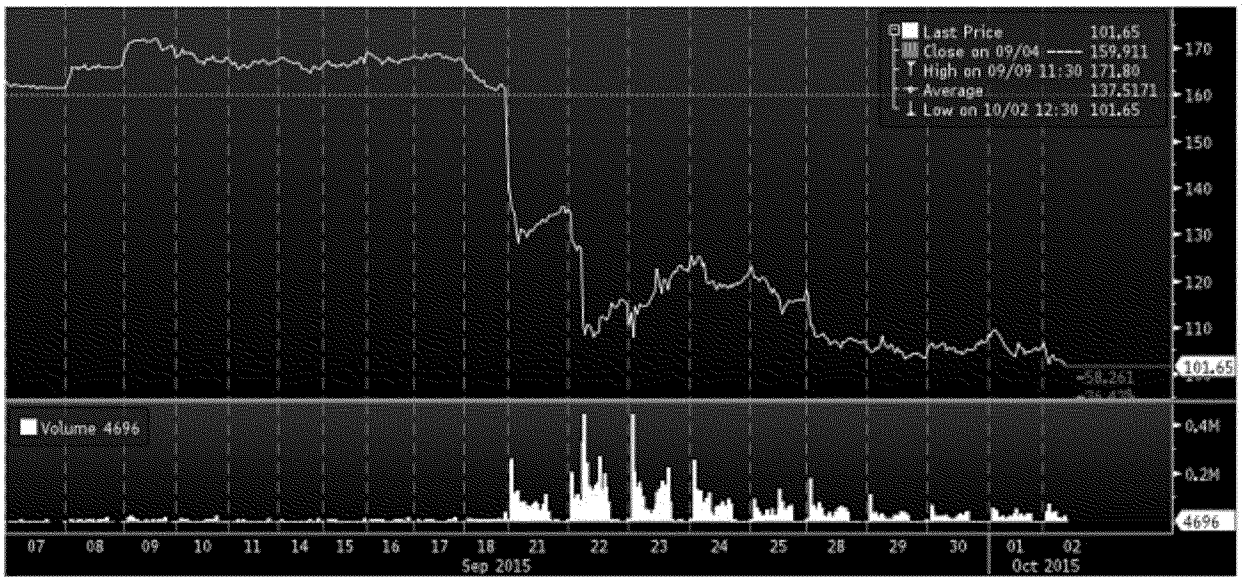
[21] http://www.audi.com/corporate/en/company/corporate-management/members-of-the-board/ulrich-hackenberg.html.

[22] http://press.porsche.com/more_about/executives/pag/hatz.php.

[23] http://www.volkswagenag.com/content/vwcorp/info_center/en/news/2012/09/Dr_Heinz_Jakob_Neusser.html.

[24] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

decline ever since, as reflected in this graphic from the *Telegraph* in the United Kingdom:



16. According to an October 3 article from Reuters, "[a]t an internal company meeting this week at the VW headquarters in Wolfsburg, Pötsch described the situation as an 'existence-threatening crisis for the company', Germany's *Welt am Sonntag* reported in a release ahead of Sunday's publication."[25]

17. As explained below, and contrary to the suggestions of some of Volkswagen's spokespersons, the unlawful conduct here was not the action of renegade lower-level employees. It was instead the product of a concerted scheme by top executives at Volkswagen to save costs through use of the TDI technology, break into the United States diesel passenger car market by

[25] http://mobile.reuters.com/article/idUSKCN0RX0GQ20151004. Pötsch's accession to the VWAG Board has been criticized. Hans-Christoph Hirt, a director of Hermes Equity Ownership Services, an adviser to pension fund investors in companies including Volkswagen, said the appointment created a "serious conflict of interest": "[Pötsch] was a key VW executive for more than a decade and under German law the management board has a collective responsibility . . . The lawyers will surely demand that he recuse himself from any supervisory board meetings when management's role is discussed." http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.

VW FOIA, EPA 06/20/2017 2017-FFP_034744

concealing from regulators and the public the inability of cars using that technology to meet federal and state emissions standards, market the TDI cars through an elaborate seven-year long campaign of false advertising and lying to state and federal officials, and thereby obtain a monopoly share of the United States Clean Diesel passenger car market.

18. The German periodical *Bild am Sonntag* revealed that Robert Bosch GmbH ("Bosch"), the supplier of some components of the emissions control system, used by Volkswagen in TDI diesel vehicles, also supplied Volkswagen with diesel software for test purposes. Bosch reportedly told VWAG in 2007 that using that software in vehicles on the road would be illegal.[26] Similarly, *Süddeutsche Zeitung* has reported that Neusser had ignored least one Volkswagen engineer's warnings over "possibly illegal" practices in 2011.[27] Spiegel Online reported that groups within Volkswagen knew of potential issues as far back as 2005 or 2006.[28] OlafLies,a VWAG Board member, has stated publicly that **"[t]hose people who allowed this to happen, or who made the decision to install this software--they acted criminally. They must take personal responsibility**."[29] (Emphases added).

19. As discussed in further detail below, Volkswagen has set aside the inadequate sum of 6.5 billion Euros (approximately $7.2 billion) to deal with the fallout from this fraud. Numerous countries across the world are investigating the matter and here, in the United States, probes are being conducted by the United States Department of Justice ("DOJ"), a coalition of state attorneys general ("AGs"), and members of the United States House of Representatives. The EPA has ordered a recall.

II. THE PARTIES.

A. Plaintiff

20. CAS is a non-profit, Section 501(c)(3) public interest organization headquartered in Washington, DC. It was founded by consumer advocate Ralph Nader and Consumers Union in 1970 to provide consumers with a voice for auto safety and to provide information to consumers on how to purchase the best motor vehicle for their needs. CAS has over 15,000 members nationwide. CAS is dedicated to promoting automobile and highway safety, ensuring that defective and unsafe automobiles and automobile equipment are removed from the road, helping make roads safer for motor vehicles through safer designs and traffic, and working for improved fuel efficiency and lower emissions from motor vehicles.

21. As part of its commitment to improved fuel efficiency, in 2008, the CAS integrated into its programs the Safe Climate Campaign which aims to fight global warming by promoting laws and regulations that require strict emissions standards. The Safe Climate Campaign also pushes automakers to make clean, energy efficient vehicles, and urges consumers to make energy-efficient choices in transportation.

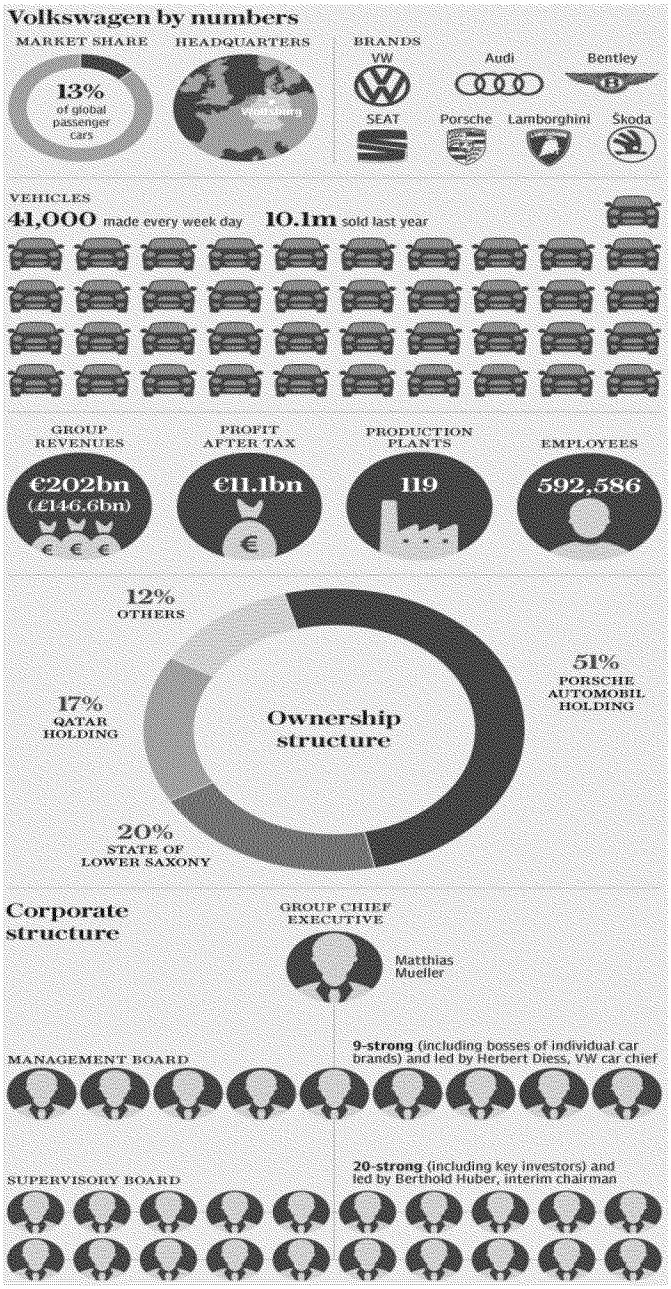
22. CAS has individual standing as an organization because it has been harmed by Defendants' wrongful conduct as alleged herein. CAS had devoted considerable time and resources encouraging automakers to sell energy-efficient vehicles and encouraging members to purchase clean, energy-efficient vehicles. As a result of Defendants' unlawful conduct, CAS has had to redirect staff time and financial resources away from its planned activities.

23. CAS also has associational standing on behalf of its members who have claims against Defendants for the violations alleged in this complaint. In addition to the redress it seeks for its own injury, and where its members are entitled to so and the claims for relief otherwise permit, CAS seeks declaratory and injunctive relief.

VW FOIA, EPA 06/20/2017 2017-FFP_034746

B. Defendants

24. Defendant VWAG is a car corporation organized and existing under German law, with its principal place of business in Wolfsburg, Germany. VWAG is the parent company of Defendants VWoA and Audi. The structure of VWAG is set forth in the following chart:



25. Defendant Audi AG is a car corporation organized and existing under German law, with its principal place of business in Ingolstadt, Germany. It is owned by VWAG. Audi was

created when VWAG merged two of its companies, Auto Union and NSU Motorenwerke AG. Audi is a 99.55%-owned subsidiary of the Volkswagen Group. Audi is now Volkswagen's luxury vehicle brand, and uses the slogan "Truth in Engineering".

26. Defendant the Volkswagen Group of America, Inc. is a corporation organized and existing under New Jersey law. Its headquarters are in Herndon, Virginia. The Volkswagen Group of America, Inc. is a wholly-owned subsidiary of VWAG. It is one of the world's largest producers of passenger cars. Through Volkswagen of America, Inc., it sells the Beetle, Beetle Convertible, CC, Eos, e-Golf, Golf, Golf GTI, Golf SportWagen, Jetta, Passat, Tiguan, and Touareg vehicles through Volkswagen Authorized Dealers located in the United States. Volkswagen Group of America, Inc.'s operations in the United States include research and development; parts and vehicle processing; parts distribution; sales, marketing and service offices; financial service centers; and manufacturing.

27. Defendant Volkswagen of America, Inc. is owned and operated by the Volkswagen Group of America, Inc. and sells Volkswagen vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

28. Defendant Audi of America, LLC is a subsidiary of Audi AG that sells Audi vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

III. JURISDICTION AND VENUE.

29. This Court has jurisdiction over this action pursuant to 28 U.S.C. §§ 1332(a) and 1367. The cost of compliance with the requested injunctive relief exceeds $75,000.

30. Venue is proper in this judicial district and in the Alexandria Division thereof pursuant to 28 U.S.C. § 1391(b) and (c), in that at least one of the Defendants resides in this judicial district, is licensed to do business or is doing business in this judicial district.

IV. TRADE AND COMMERCE.

31. Approximately 482,000 Affected Vehicles have been sold or leased in the United

VW FOIA, EPA 06/20/2017 2017-FFP_034748

States in a continuous and uninterrupted flow of interstate commerce and foreign commerce during the last seven years, including through and into this judicial district. The business activities of the Defendants substantially affected interstate trade and commerce in the United States and caused antitrust injury in the United States.

V. FACTUAL ALLEGATIONS.

A. Automobile Emissions Regulations in the United States.

32. Congress enacted the first major Clean Air Act ("CAA") and established the EPA in 1970. The CAA, amended in 1975 and 1990, requires vehicle manufacturers to certify to the EPA that their cars and trucks will meet applicable federal emission standards.[30] The EPA administers a certification program to ensure that every vehicle complies with its emission standards. EPA-issued certificates of conformity are required for every vehicle sold in the United States, and the EPA must approve every vehicle entering United States commerce. In these certification efforts, the EPA relies on test data submitted by automobile manufacturers, which submit the vehicles to the agency's testing procedures in their own laboratories. The EPA audits a small fraction of the new vehicles each year to ensure compliance in a process known as "confirmatory testing."[31]

33. The Affected Vehicles, like any other car sold in the United States, were required to satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. §86.1811-4; Clean Air Act §101(b)(1) – (2), 42 U.S.C. §7401(b)(1)(2).

34. Section 203(a)(3)(b) of the CAA prohibits the manufacture, selling, or installation

---

[30] http://www2.epa.gov/laws-regulations/summary-clean-air-act.

[31] http://www.autonews.com/article/20151004/OEM11/310059955/vw-emissions-violations-put-self-certification-under-new-scrutiny. The EPA has a webpage describing that process in detail. http://www3.epa.gov/otaq/cert/eng-cert/confirmatory/overviewconfirmatorytesting/overviewconfirmatorytestingscript_updated.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_034749

of any device that bypasses, defeats or renders inoperative a required element of a vehicle's emissions control system. 42 U.S.C. §7522(a)(3)(b). Section 203(a)(10 of the same statute also prohibits the sale of motor vehicles or engines that are not covered by valid certificates of conformity with applicable emissions standards. 42 U.S.C. §7522(a)(1). The regulatory requirements for defeat devices are set forth in 40 C.F.R. Part 86.

35. The EPA has been rigorous in punishing automobile manufacturers or engine makers that utilize defeat devices. For example, in late 1995, it entered into a $45 million dollar settlement with General Motors Corporation regarding the use of defeat devices on 470,000 Cadillac cars.[32] Likewise, in August of 1998, it fined Honda $267 million and Ford $7.8 million for selling vehicles equipped with defeat devices that prevented emission control systems from working properly.[33] Similarly, in October of that year, it and the DOJ fined seven truck and heavy duty equipment manufacturers $83.4 million for engaging in similar conduct.[34]

36. Volkswagen was or should have been aware of these precedents. Indeed, the company itself is a recidivist violator of the CAA. In July of 1973, the EPA referred to DOJ for legal action a claim that defeat devices were installed on 1973 Volkswagens. A copy of that referral is attached as Exhibit 3 to this complaint. The matter was settled for $120,000 in March of 1974.[35] Similarly, in June of 2005, Volkswagen entered into a consent decree with DOJ whereby it paid a $1.1 million penalty concerning its failure to notify the EPA of emissions defects

[32] http://www.autosafety.org/sites/default/files/imce_staff_uploads/Cadillac%20%2445%20Million%20Defeat%20Device%20Penalty%2011-31-95.pdf.

[35] http://www.autosafety.org/sites/default/files/imce_staff_uploads/VW%20Defeat%20Device%20%24120%2C00%20fine%203-12-74%20Pr.pdf.

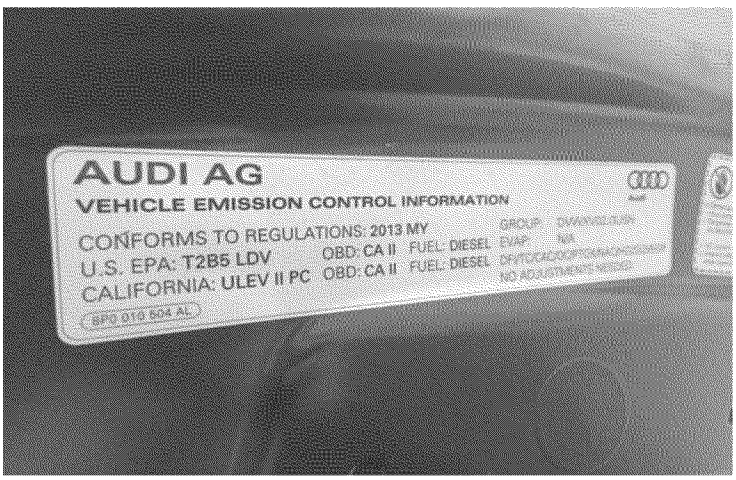
VW FOIA, EPA 06/20/2017 2017-FFP_034750

in certain vehicles manufactured at its facility in Mexico.[36] A copy of that decree is attached as Exhibit 4 to this Complaint.

37. CARB is a department of the California Environmental Protection Agency. It was created in 1967. California is the only state permitted to have such a regulatory agency, because it was created prior to the enactment of the CAA. CARB's mission is to "[t]o promote and protect public health, welfare and ecological resources through the effective and efficient reduction of air pollutants while recognizing and considering the effects on the economy of the state."[37]

38. The EPA introduced phased in Tier 2 emissions standards from 2004 to 2009. California has similar standards in its CA LEV II standard. The Tier 2 Bin rating system applied to all passenger vehicles regardless of fuel type. Tier 2 Bin 5 standards—the ones applicable to the Affected Vehicles—imposed an emission rate for NOx of 0.07 grams per mile.[38]

39. New cars that are sold bear stickers indicating that they are EPA-and/or CARB compliant. Here is a photograph of such a sticker on the inside of the hood of a TDI Audi A3, one of the Affected Vehicles.

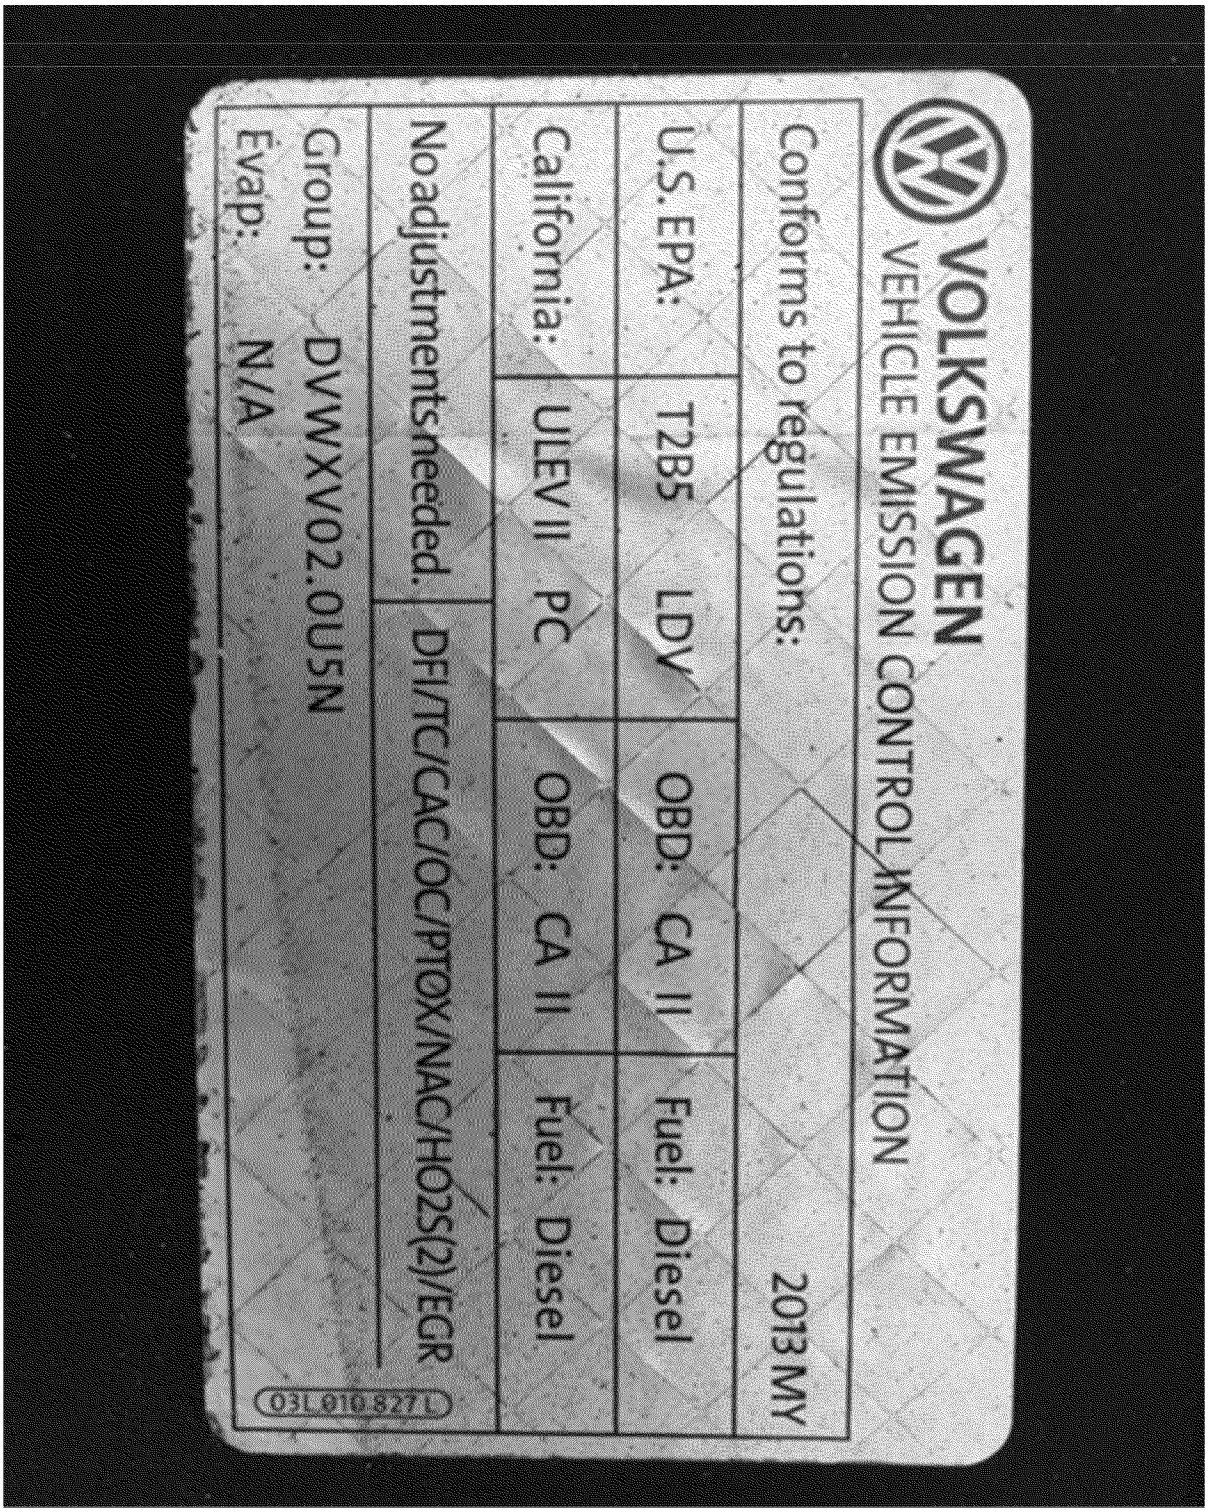


[36] http://www.autosafety.org/sites/default/files/imce_staff_uploads/volkswagen-cd.pdf.

[37] http://www.arb.ca.gov/html/mission.htm.

[38] http://www.nctcog.org/TRANS/air/vehicles/tech/compliance/index.asp.

And here is a similar sticker for a 2013 TDI Volkswagen Golf:



Through these types of notice, Volkswagen was representing to customers that the Affected Vehicles complied with federal and state emissions laws. This was an outright lie.

B. Diesel Cars and Control of NOx Emissions.

40. Diesel-powered cars, like gasoline-powered cars, must also meet the emissions standards established by the EPA and CARB. With diesel-powered engines, car manufacturers must use different--and more expensive--emission control systems than are used in gasoline-powered cars.

41. Diesel fuel has a greater energy density than gasoline. It converts heat into energy more efficiently than gasoline, sending less heat out of the tailpipe than gas-powered vehicles. Because it has greater energy density, diesel also is more efficient: diesel vehicles can get up to 30% more miles per gallon than similar gasoline-powered cars. In addition, because of their higher compression, diesel engines can generate a lot of torque, providing strong acceleration and additional power needed for towing.

42. While diesel vehicles have certain advantages over gasoline, they also have some disadvantages. Because diesel fuel is heavier and oilier than gasoline, it can generate more pollution. While diesel engines emit lower amounts of carbon monoxide than gasoline-powered engines, they emit more NOx.

43. Diesel fuel exhaust has been recognized by the World Health Organization to be a carcinogen for humans.[39]

44. Automakers have faced significant challenges in controlling NOx emissions sufficiently to meet environmental standards, particularly with smaller vehicles, and particularly in the United States, which has some of the strictest emission controls in the world. The website of greencongress.com explains the two types of approaches diesel automobile manufacturers have

[39] http://www.iarc.fr/en/media-centre/pr/2012/pdfs/pr213_E.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_034753

used to deal with NOx emissions:

> Broadly, there have been two catalytic approaches used to reduce exhaust NO_x: urea-based selective catalytic reduction (SCR) and lean NO_x trap (LNT) catalysts.
>
> --The urea-SCR (urea=AdBlue) approach requires on-board storage of the reductant fluid which is introduced into the exhaust upstream of the SCR catalyst. It is then converted to ammonia which interacts with NO_x on the SCR catalyst to form water and nitrogen.
>
> --LNT technology utilizes fuel from the vehicle and advanced engine controls to enable periodic operation of the engine at rich air-to-fuel ratios to produce oxygen-depleted exhaust suitable for reducing NO_x stored on the LNT catalyst surface.[40]

45. The article indicates that Volkswagen had planned to use both technologies as of 2007, but elected to go with the LNT approach (which it referred to as TDI). As explained below, the deciding factor was apparently cost. Because of the extra equipment (including a urea tank) and technology required to clean the NOx emissions from the diesel exhaust, SCRs can add significantly to the cost of producing the engine. They also make diesel cars heavier than they otherwise would be, thus potentially decreasing fuel efficiency, torque and power.

46. Honda, which sells diesel cars in markets other than the United States, never tried to sell them here. That is because, according to Honda's research, "[t]he market would not bear the costs of doing diesel correctly." In order to meet the stringent United States emissions standards, Honda would have had to add costly emissions controls to every diesel model, which would make them more expensive than gasoline-powered competitors. "At such a high premium, customers simply wouldn't buy them."[41]

C. Volkswagen's Decision To Use TDI Technology.

47. Volkswagen has been selling cars in the United States since 1949, when it introduced the iconic Volkswagen Beetle. Although it was for many years the top-selling imported

[40] http://www.greencarcongress.com/2015/09/20150921-vw2l.html.

[41] http://mashable.com/2015/09/27/vw-dieselgate/#2VosDbcL7iqT.

VW FOIA, EPA 06/20/2017 2017-FFP_034754

car in the United States, Japanese imports overtook Volkswagen and other European imports in the 1990s.

48. The decisive factor in the decision to use TDI technology in 2007-08 was the appointment of Winterkorn as CEO of VWAG in January of 2007. Winterkorn was involved in overseeing research and development and had that responsibility at the time he resigned as CEO. In 1995, he took over as the head of Volkswagen Group Product management and a year later, he assumed the role of Member of the Board of Management for "Technical Development" at the Volkswagen brand. He assumed a similar role when he became Chairman of the Board of Management at Audi.[42]

49. Before Winterkorn took over as VWAG's CEO on January in 2007, Volkswagen had partnered with Bosch and Daimler to explore the use of a diesel emissions control system called BlueTec.[43] BlueTec was a technology developed by the latter two companies and championed by Wolfgang Bernhard ("Bernhard"), former head of the Volkswagen brand and a former Daimler executive. BlueTec was an SCR technology; it required the use of a liquid urea tank, so that urea could be sprayed onto the emissions in order to neutralize the NOx. The urea tank not only takes up space and adds weight (disadvantages that are especially acute in the market for small, fuel-efficient cars), but also requires the owner to refill the tank, making the diesel engine more inconvenient than a traditional gasoline-powered car. When Bernhard left the company after Winterkorn took control, the BlueTec technology was scrapped for smaller vehicles. Volkswagen only began using a form of SCR technology on a few of its smaller vehicles in 2012.

50. *Automotive News* describes the sequence of events:

> *Bild am Sonntag* said the roots of the crisis were planted in 2005 when then-VW brand Chief Wolfgang Bernhard wanted VW to

[42] *See* http://www.volkswagenag.com/content/vwcorp/content/en/the_group/senior_management/winterkorn.html.

[43] For the source of this information, *see* http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_034755

> develop a new diesel engine for the U.S. market. Bernhard recruited Audi engineer Rudolf Krebs who developed a prototype that performed well in tests in South Africa in 2006, the paper said.
>
> Bernhard and Krebs argued that the only way to make the engine meet U.S. emission standards was to employ in the engine system an AdBlue urea solution used on larger diesel models such as the Passat and Touareg, according to the report.
>
> This would have added a cost of 300 euros ($335 in today's U.S. dollars) per vehicle -- a sum that VW finance officials said was too much at a time when a companywide cost-cutting exercise was under way.
>
> Bernhard left VW in January 2007 before the diesel engine went into production. Krebs was moved to another role when Martin Winterkorn became VW Group and brand CEO in 2007.
>
> Winterkorn, Audi's former CEO, asked Audi development boss Ulrich Hackenberg and Audi engine boss Wolfgang Hatz to move to VW's Wolfsburg headquarters and continue development work on the engine, *Bild am Sonntag* said.
>
> The engine then ended up in VW Group diesels with its engine software manipulated to fool diesel emissions tests in the U.S.[44]

Hatz and Hackenberg, as noted above, were two of the executives whom VWAG recently suspended.

51. Engineers at Volkswagen had been looking at an alternative to BlueTec technology, an alternative that ultimately evolved into the TDI "Common Rail" system. In 2006, Richard Dorenkamp, head of Volkswagen's diesel engine development, gave a presentation in Detroit. He described the TDI system Volkswagen engineers developed and how it could be used in small cars and meet increasing US demands for fewer emissions.[45] Volkswagen's TDI Clean Diesel pollution

---

[44] http://www.autonews.com/article/20150927/COPY01/309279989/bosch-warned-vw-about-illegal-software-use-in-diesel-cars-report-says. Winterkorn was generally very concerned about the costs associated with developing eco-friendly automotive engines. As he said at the 2014 Paris auto show, "[c]limate protection is not available free of charge. Every gram of reduction in [tailpipe] C02 costs us 100 million euros. Every gram!" http://blog.caranddriver.com/vws-winterkorn-to-greens-so-get-off-our-backs-already/.

[45] http://www1.eere.energy.gov/vehiclesandfuels/pdfs/deer_2006/session7/2006_deer_dorenkamp.pdf.

control technology differed from the SCR technology used by other manufacturers to control NOx emissions. The greencarcongress.com article cited earlier describes it in detail. Instead of having a urea tank, the TDI Clean Diesel cars technology used a trap to collect NOx. While saving the space, weight and cost required by the urea tank in the SCRs, Volkswagen's TDI Clean Diesel technology--when it was operational--required additional use of fuel, thus degrading both gas mileage and performance. The trap was controlled by a computer module that could save fuel by allowing more pollutants to pass through the exhaust system.

52. In June of 2007, six months after Winterkorn took over as CEO of VWAG, Volkswagen issued a report entitled "Power Train and Fuel Strategy--The Path To The Future."[46] It stated:

> In the first stage on the path to this independence, it will be important to utilize existing fossil fuels as efficiently as technically possible. Volkswagen is putting its stamp on this phase with vehicles such as the BlueMotion models, a universally fuel-efficient fleet of TDI engines, highly efficient and unique TSI engines, successful natural gas vehicles (EcoFuel) and a lineup of models that still leaves room for automotive dreams. Very soon these fundamental technologies will be further refined. **New powertrains, including an engine concept developed for use in the USA, under the working title "BlueTDI", are already in the prototype stage. These engines will fulfill the toughest emissions laws in the world – even the so-called "Tier2 Bin5" in California, one of the most stringent emissions standards in the world**. (Emphases added).[47]

53. Volkswagen had planned to introduce the Jetta TDI Clean Diesel in the United States earlier than it eventually did. In November of 2007, it was reported as follows:

> A problem with the emissions system in Volkswagen's new Jetta

[46] It can be found at http://www.volkswagenag.com/content/vwcorp/info_center/en/themes/2007/06/powertrain_and_fuel_strategy.html.

[47] In 2008, five VWAG engineers published a two-part article in the May and June issues of *MTZ* magazine saying they had resolved the issue of how to best control emissions and could now meet California standards through the use in part of a new on-board diagnostics system. Similarly, Achim Freitag, a testing engineer in Volkswagen's diesel development department, touted the new engine in a speech given later that year. *See* http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions/.

VW FOIA, EPA 06/20/2017 2017-FFP_034757

> TDI will delay the launch of the diesel sedan for about six months. The car is critical to VW's plans to get back on track in the United States.
>
> VW spokesman Keith Price confirmed that the delay will be announced this week at the Los Angeles auto show. Price would not give specifics about the technical problem, but he said it has been fixed.
>
> The technical changes engineers made to solve the problem mean the car must go through emissions testing and validation again, Price said.
>
> VW dealers have been without a new diesel car to sell since last spring. Production of the new model, which will be sold in all 50 states, was scheduled to start in January. The car will be built in Puebla, Mexico.
>
> U.S. sales originally were expected to begin in early spring, Price said. Now sales won't start until later in the summer."
>
> "Sure, they're disappointed," Price said of dealers who have learned of the delay.
>
> Price said there is a lot of pent-up demand from loyal VW diesel buyers for the next- generation Jetta, which has a new engine built in Germany and a new diesel fuel injection system.
>
> "They're disappointed, but they see the point that this car has to be perfect," Price said of the dealers, adding, "They recognize the importance of this not only for their stores, but for the VW brand."
>
> A fleet of about 40 Jetta TDIs is undergoing testing as part of the validation procedure.[48]

54. What apparently happened is that the TDI technology failed initially to withstand United States emissions testing. The decision was made to delay the launch of the vehicle and activate the algorithm that functioned as a defeat device in the software management system. Horn confirmed this scenario orally in testimony given to the Subcommittee of Oversight & Investigations of the Energy & Commerce Committee of the United States House of

[48] http://www.cleanmpg.com/forums/showthread.php?t=7254.

VW FOIA, EPA 06/20/2017 2017-FFP_034758

Representatives on October 8 ("October 8 Hearing").[49] This is consistent with the timing of the letter from Bosch described above that raised the illegality of such a tactic. It is also consistent with recent revelations that appeared in the October 4 issue of *Bild am Sonntag*:

> An internal review at Volkswagen AG shows the decision to install software that reduces diesel emissions in testing was made just before serial production of the company's EA 189 engine [used in many of the Affected Vehicles], German tabloid Bild am Sonntag said.
>
> Bild said the software was first installed in its diesel engines in 2008, shortly before the EA 189 was mass produced. The move was taken because there was no way at the time to reconcile meeting emission standards within the targeted cost of the engine, the tabloid said in an advance release of the article to be published Sunday. Otherwise the company would have had to abandon the introduction of the engine, development of which was begun in 2005, the newspaper said.[50]

55. This was not a course of conduct known to only a select few within Volkswagen. As noted in one article:

> The idea that a small group of relatively junior engineers would have done this on their own is not consistent with how engineers build complex, safety-critical systems.
>
> The basic engine management software was written by component supplier Bosch. The responsibility for configuring the software for the EA189 engine would have involved a substantial, multi-disciplinary team of engineers at Volkswagen, working with engineers at the supplier Bosch.
>
> Before the engines could have gone into production, those engineers and their managers would have reviewed and approved the design and calibration of the engine management systems.
>
> They would have also agreed upon, and employed, a systematic testing schedule. This would have involved testing on an engine-only rig, road testing on private grounds as well as testing on public roads.
>
> The anti-pollution engineers would have been responsible for ensuring that the engine management system was sending

[49] His testimony is on video at http://www.c-span.org/video/?328599-1/hearing-volkswagen-emissions-violations.

[50] http://www.marketwatch.com/story/vw-began-using-emissions-software-in-2008-report-2015-10-04.

VW FOIA, EPA 06/20/2017 2017-FFP_034759

> appropriate commands to their components, and that their hardware was responding appropriately.
>
> This kind of exhaustive testing is one of the reasons why developing new vehicle models costs billions of dollars and takes several years.
>
> One possibility is that a large group of Volkswagen engineers conspired to falsify the written records of of this testing.
>
> An alternative scenario is that accurate written testing records were made, showing that the pollution controls were inoperative in normal driving. These accurate records were reported through normal channels, and the engines went into production anyway.
>
> It is very hard to imagine how either event could have occurred without the influence of senior managers.[51]

Horn virtually conceded as much at the October 8 hearing.

56. The 2009 Model Year TDI Jetta was introduced and passed the Tier 2 Bin 5 emissions test with flying colors. A Reuters article describes its successful launch:

> Volkswagen had heavily marketed what it called "clean diesel" engines starting in 2008 with the 2009-model Jetta TDI. It appeared to have found a sweet spot between high-performance and fuel-efficiency with a zippy, fun-to-drive car that topped 40 miles per gallon in highway driving. Named "Green Car of the Year" at the Los Angeles auto show in 2008, the Jetta TDI was seen as a breakthrough in a country where diesel passenger cars occupy a tiny niche compared with Europe, where they are about half of the market.
>
> "It's not your grandfather's diesel," Krause said in a September 2008 presentation to U.S. regulators, according to a video of the remarks.
>
> [Norbert] Krause [head of VWoA's environmental office until 2009] and other VW officials promised a diesel that would meet pollution laws in all states, including California where diesel engines had long been associated with smog and cancer-causing soot.
>
> By that point, VW and other automakers had lobbied for almost a decade for regulators to give diesel another chance. In 2000, VW and other companies with an interest in promoting diesel, including Mazda, formed the Diesel Technology Forum to lobby for increased use in the United States as a way to reduce reliance on imported oil. In 2005, an energy bill signed by President George

[51] http://theconversation.com/where-were-the-whistleblowers-in-the-volkswagen-emissions-scandal-48249.

> W. Bush offered tax credits for diesel buyers. That gave the first wave of diesel Jetta buyers an income tax credit of $1,300 each.
>
> In 2009, after the new Jetta went on sale, VW dealers initially sold out, including in California where regulations had effectively shut the market to diesels earlier in the decade.[52]

57. As noted in the article, *Green Car Journal* gave it the 2009 Green Car of the Year award and gave the TDI Audi A3 the 2010 Green Car of the Year Award.[53] Those awards have been rescinded in light of the present scandal.[54] The TDI Clean Diesels were a resounding success and VWoA sold many units.[55] As recently as its 2014 sustainability report, VWAG crowed about how "[t]he Volkswagen Group has a long tradition of resolute commitment to environmental protection" and how it intended to "put our creative powers to good use for the benefit of the people and the environment."[56]

58. At conferences and in published papers, Volkswagen extolled the efficiency and low emissions of its Clean Diesel technology.[57] And commentators agreed. One stated that Volkswagen was "the only company to have mastered the new emissions regulations using a compact, inexpensive treatment system. It allowed them to roll out diesel engines in one small car

VW FOIA, EPA 06/20/2017 2017-FFP_034761

after another at relatively low prices."[58] Volkswagen's competitors had long wondered how Volkswagen could produce a clean diesel engine at such an affordable price. As Robert Lutz, former vice chairman of General Motors Corporation, recounted: "I kept asking our engineers: 'What's wrong with you guys? VW seems able to do it.' I said, 'Are they magicians or something?' The engineers said they couldn't answer that question."[59] Now, they have their answer. Volkswagen cheated.

59. The competitive advantages of cheating on emissions have now become clear. "Manipulating emissions results allowed Volkswagen to keep down engine costs in a 'clean diesel' strategy that was popular in Europe and at the heart of a drive to improve U.S. results."[60] As an article in the *New York Times* put it, "[d]isabling the emissions controls brought major advantages, including much better mileage--a big selling point in Volkswagen's push to dominate in America."[61] These sales were part of the reason VWAG was able to surpass Toyota as the world's biggest automaker in 2015, as noted above. And they were sales built upon lies.

60. This systemic attitude of winning at all costs in spite of noncompliance with national environmental regulations is part of the corporate culture of Volkswagen, as explained at length in a September 24, 2015 *New York Times* article:[62]

> There is a long tradition of scandal and skulduggery in the auto industry, but few schemes appear as premeditated as Volkswagen's

VW FOIA, EPA 06/20/2017 2017-FFP_034762

brazen move to use sophisticated software to circumvent United States emissions standards.

That such a thing could happen at Volkswagen, Germany's largest company and the world's largest automaker by sales — 202.5 billion euros last year — has mystified consumers and regulators around the world. But given Volkswagen's history, culture and corporate structure, the real mystery may be why something like this didn't happen sooner.

"The governance of Volkswagen was a breeding ground for scandal," said Charles M. Elson, professor of finance and director of the John L. Weinberg Center for Corporate Governance at the University of Delaware. "It was an accident waiting to happen." The company, founded by the Nazis before World War II, is governed through an unusual hybrid of family control, government ownership and labor influence. Even by German standards, "Volkswagen stands apart," said Markus Roth, a professor at Philipps-University Marburg and an expert in European corporate governance. "It's been a soap opera ever since it started."

****

I spoke this week to a longtime former senior Volkswagen executive, who agreed that a scandal, especially one involving emissions, was all but inevitable at Volkswagen. He cited the company's isolation, its clannish board and a deep-rooted hostility to environmental regulations among its engineers.

The former executive, who spoke on the condition of anonymity because he now works at a competing global automaker, said that Wolfsburg, where Volkswagen is based in Lower Saxony and the city with the highest per capita income in Germany, is even more remote and isolated than Detroit was in its heyday. "The entire economy is automotive," he said. "People have a completely uncritical view of cars and their impact on the environment because they all make a living from the industry."

****

The Volkswagen board has been especially slow to move on environmental issues, investing less in electric and hybrid engine technology than industry leaders.

"There's an attitude among the German public that it's very unfair for the U.S. to target the auto industry over emissions," Professor Roth said. "If you have electric cars and a coal-fired plant producing the electricity, you gain nothing."

The former Volkswagen executive said Volkswagen's engineer-driven culture takes the notion even further. He said the engineers felt that the politicians were guilty of rank hypocrisy, especially in

> the United States, also grumbling that electric cars make no sense as long as power plants are burning fossil fuels.
>
> "There's an attitude of moral superiority there," he said. "The engineers think they know best."
>
> That Volkswagen is nonetheless obliged to obey applicable environmental laws, he said, is a notion likely to fall on deaf ears in Wolfsburg, especially compared to demands to be No. 1 in sales. (The motive for the software evasion is widely believed to have been to increase sales of diesel-powered cars in the United States.)

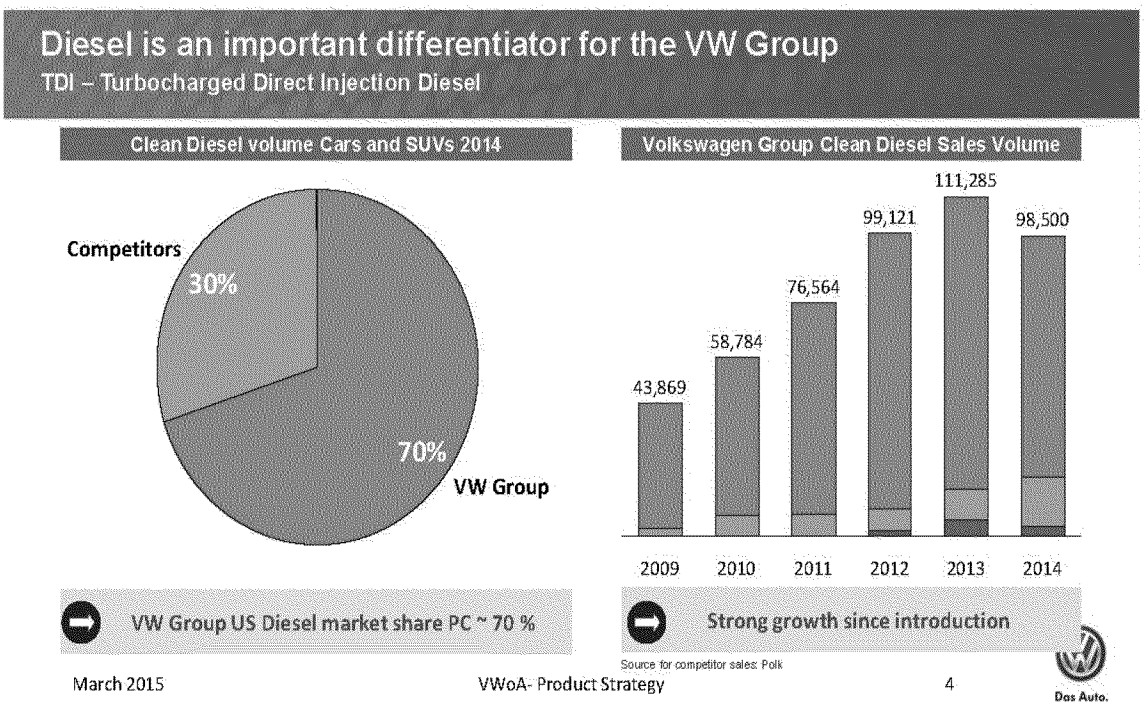
Thus, executives and engineers at Volkswagen were clearly unhappy with United States automotive emissions standards and were all too willing to sacrifice those standards (and their obligations under United States antitrust laws) in order to ensure that their company became the number one automaker in the world. The current scandal involving Volkswagen Clean Diesel TDI vehicles is a direct result of that arrogant intention to flout United States environmental laws. It is also a direct result of what has been described by one German executive as Volkswagen's "uniquely awful" corporate governance.[63]

D. The Clean Diesel Car Market.

61. Volkswagen's illegal conduct in this country occurred in the Clean Diesel passenger car market in the United States (the "Clean Diesel Car Market"), which can be viewed as a market of its own or as a submarket of passenger cars sold in this country. This fact was confirmed in a presentation by Douglas Skorupski ("Skorupski"), Manager of Power Train Strategy for VWoA, given to the Diesel Technology Forum ("DTF") in March of 2015:

[63] http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.

VW FOIA, EPA 06/20/2017 2017-FFP_034764



62. Thus, VWoA clearly views clean diesel cars as a distinct market and Volkswagen's TDI technology as a factor that allowed it to obtain a monopoly share of that market.[64] It distinguished Clean Diesel cars from gasoline/electric hybrid cars based on superior performance:

[64] The presentation can be found at http://cleandieseldelivers.com/media/Douglas-Skorupski-VWoA_DTF_March2015.pdf. Bosch has similarly identified a distinct Clean Diesel car category: http://www.low-carbonfuels.com/pdfs/acte2011presentations/Day1/Breakout1/LightDuty/ACT2011-Breakout1-FreitagAlexPresentation150.pdf. And the EPA has noted that "Clean diesel" refers to a three-part emissions control system that combines cleaner diesel fuel, advanced engines and effective emissions control technology.

"[o]ne way Volkswagen aimed to achieve its lofty goal was by betting on diesel-powered cars — instead of hybrid-electric vehicles like the Toyota Prius--promising high mileage and low emissions without sacrificing performance."[65] Similarly, a survey conducted by Strategic Vision for Volkswagen found that customers of diesel and hybrid vehicles are very different and there is "very little crossover from one to the other."[66] The same article noted that Clean Diesel TDI and hybrid buyers differed demographically; the latter were "were just 51 percent male, 78 percent of them were married, 89 percent had no kids in the household, and their average age was 61", while the former "included far more men than women[,] [f]ewer of them were married, but more of them had children in the house, and they were fully 17 years younger, with an average age of 44." Likewise, a Volkswagen Clean Diesel IQ survey found that diesel car customers are highly aware of the benefits of clean diesel technology in contrast to hybrid and gasoline car customers. Furthermore, 94% of diesel customers will purchase clean diesel cars again while only 26% of hybrid and gasoline car customers will consider clean diesel cars for their next purchase.[67] All of this indicates little cross-elasticity of demand between hybrid vehicles and Clean Diesel vehicles.

63. Indeed, the major European competitors of Volkswagen in the Clean Diesel Car Market belong, along with Volkswagen, to an organization that is devoted to extolling the benefits of Clean Diesel cars.[68]

64. Bloomberg Business noted that consumers are willing to pay a substantial premium

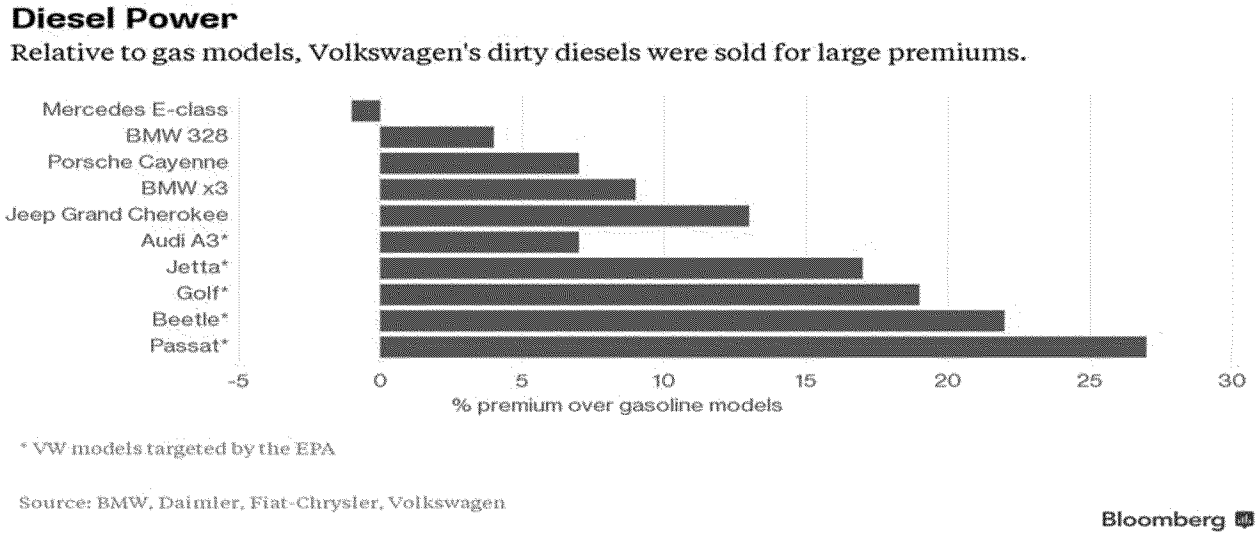
[67] http://www.autosphere.ca/fleetdigest/2013/04/01/volkswagen-surveys-diesel-drivers/. *See also* http://www.cmu.edu/gdi/docs/diesel-and.pdf (noting many key differences between diesel and hybrid car customers).

[68] http://www.clearlybetterdiesel.org/index.html#cleanDiesel.

VW FOIA, EPA 06/20/2017 2017-FFP_034766

for Clean Diesel vehicles over those of its competitors.[69]



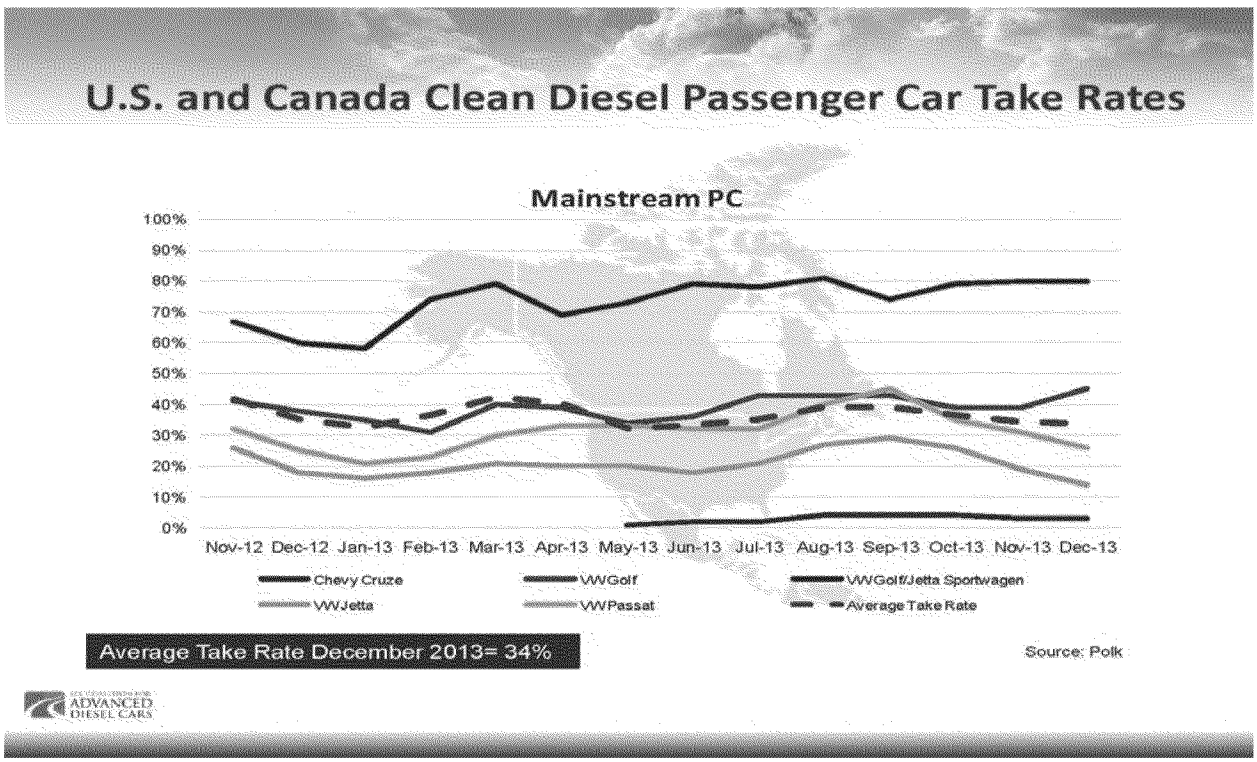
65. As the BloombergBusiness article goes on to explain:

> The math on diesel has never been tidy. The additional mileage is great, but unless one drives a lot, it doesn't really cover the added expense for the engine and for the fuel itself. At current gas prices, the diesel premium on the Passat—some $5,755—would buy enough gas to drive the gas-burning model for about 88,000 miles. **For the majority of diesel drivers, the factor that probably swung the decision was the apparent environmental benefit. The green aspect was the fulcrum**. (Emphases added).

Thus, Volkswagen's false claims about its TDI technology were a driving factor in the premium prices it charged consumers for such technology. As noted above, VWAG has taken full responsibility for the "economic damage" caused by its illegal conduct.

[69] http://www.bloomberg.com/news/articles/2015-09-23/volkswagen-s-other-diesel-ruse-premium-pricing.

66. A chart contained in a presentation made by CMW Research at the March 2015 DTF conference[70] underscores the differences in take rates between Volkswagen Clean Diesel cars and those made by its competitors:



67. The price premium for Clean Diesel vehicles is also reflected in this chart showing the price differentials between gasoline-powered models and Clean Diesel models of Volkswagen's own cars:

Clean Diesel Price Premium				
Mode	**Base**	**Mid-Level**	**Top-Level**	**Average**
VW Jetta	$2,860.00	$1,570.00	$1,030.00	$1,820.00
VW SportWagen	$5,570.00	$1,680.00	$0.00	$2,416.67
VW Golf	$2,400.00	$1,000.00	$1,000.00	$1,466.67
VW Golf	$2,950.00	$1,000.00	$1,000.00	$1,650.00
VW Beetle	$4,635.00	$4,920.00	$0.00	$3,185.00
VW Beetle	$4,080.00	$530.00	$700.00	$1,770.00
VW Passat	$5,755.00	$2,845.00	$2,135.00	$3,578.33

[70] http://cleandieseldelivers.com/media/Take-Rate-Slides-March-2014.pdf.

Audi A3	$2,300.00	$2,300.00	$2,300.00	$2,300.00
Average	$3,818.75	$1,980.63	$1,020.63	$2,273.33

E. Volkswagen's False Advertising.

68. Volkswagen, as part of its plan to increases sales and market share in the United States, increased its emphasis on diesel-powered cars and began marketing these cars heavily to the United States public beginning in 2008. It emphasized the TDI Clean Diesel cars' environment-friendly engine, excellent gas mileage, and high-quality performance. In one advertisement (which, as of this writing, was available on Audi's website after the scandal surfaced and is attached as Exhibit 5 to the Complaint),[71] for example, Volkswagen claimed:

> Getting more from less. Audi pioneered TDI® clean diesel engines to deliver more torque, lower fuel consumption and reduce CO2 emissions, compared to equivalent gasoline engines. The result of this revolutionary engineering delivers remarkable performance, while achieving increased fuel economy.

69. Another advertisement by VWAG for Clean Diesel cars asserts that

> This ain't your daddy's diesel. Stinky, smoky, and sluggish. These old diesel realities no longer apply. Enter TDI Clean diesel. Ultra-low-sulfur fuel, direct injection technology, and extreme efficiency. We've ushered in a new era of diesel.[72]

This internet advertisement is attached as Exhibit 6 to the Complaint.

70. Volkswagen's advertising relentlessly touted the supposed fuel efficiency and environmental features of its Clean Diesel TDI vehicles. In 2009, Volkswagen introduced its "Meet the Volkswagens" campaign, which promoted "fuel efficiency, green credentials, cost of ownership and safety," and compared Volkswagen's diesel passenger cars to its competitors. According to Tim Ellis, Volkswagen's marketing chief, the goal of this advertising campaign was to "grow the brand in the U.S."[73] This campaign, among other things, included social media links

72 https://web.archive.org/web/20150330110301/http://www.vw.com/features/clean-diesel/.

73 http://abcnews.go.com/Business/story?id=7493781.

VW FOIA, EPA 06/20/2017 2017-FFP_034769

to a blog (tdi.vw.com/tdi), which focused on Volkswagen's TDI clean diesel model.

71. Between 2011 and 2013, Volkswagen spent more than $2.9 billion annually on advertising world-wide; many of those advertising dollars were directed at the United States public. Volkswagen issued hugely popular videos featuring the Golden Sisters, who purported to debunk the myths about polluting diesel cars.[74] Other videos that were highly successful included a "Truth or Dare" effort started in 2009 that was about "debunking the myths on clean diesel and fueling the passion of existing diesel owners"; a 2009 Audi video that proclaimed "diesel, no longer a dirty word"; and a Passat "being a Mom" video, all of which can be viewed on the *New York* magazine website.[75] Another well-known video showed German engineers of TDI Clean Diesel vehicles earning their "angel's wings."[76]

72. Volkswagen also used point-of-purchase displays at the showrooms of Volkswagen Authorized Dealers such as the one depicted below:

[74] http://blog.caranddriver.com/vws-hilarious-new-tdi-diesel-ads-return-excellent-viral-mileage/.

[75] http://nymag.com/daily/intelligencer/2015/09/vws-clean-diesel-ads-now-make-us-feel-dirty.html.

[76] https://www.youtube.com/watch?v=fwkPEza9FPw.

VW FOIA, EPA 06/20/2017 2017-FFP_034770

73. As VWoA's Mark Barnes put it, the TDI Clean Diesel cars were ''fantastic power train[s]" with "very good fuel economy." Yet "[i]t's also good for the environment because it puts out 25% less greenhouse gas emission than what a gasoline engine would. And thanks to the uniqueness of the TDI motor, it cuts out the particulate emissions by 90% and the emissions of nitrous oxide are cut by 95%. So a very very clean running engine. Clean enough to be certified in all 50 states.''[77]

74. In television and print advertisements and in social media, Volkswagen strived to present its Clean Diesel TDIs as the environmentally-friendly, fuel-efficient, fun-to-drive and reasonably priced passenger car. As noted above, Volkswagen's sham advertising campaign was a success. Unfortunately, all of these accolades were based on a sham perpetrated by Volkswagen for seven years.

F. Volkswagen's Defeat Device.

75. As noted above, Volkswagen's defeat device is described as a "sophisticated software algorithm" that detects when the car is undergoing emissions testing. The algorithm used information about how the car was being steered, how long the engine ran and atmospheric pressure to "precisely track" the conditions that corresponded to a federal emissions test, according to the EPA. During emissions testing, the software "turns on" the car's full emissions control system in order to pass the test. Under normal driving situations, however, these emissions control systems are ***turned off***, allowing the cars to spew as much as 40 times the allowable amount of NOx into the air. As an EPA spokesman noted, the defeat device was "particularly difficult for us to detect."[78] This ruse went undetected for seven years, although as noted above, Bosch and one

[77] http://www.businessinsider.com/volkswagen-preps-for-a-diesel-revolution-2009-10.

[78] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagons-deception-the-recall-that-never-fixed-any-cars/. A useful timeline of how the scandal came to light is provided on the website of Cars.com: https://www.cars.com/articles/vw-diesel-crisis-timeline-of-events-1420681251993/.

VW FOIA, EPA 06/20/2017 2017-FFP_034771

of VWAG's own engineers complained about it to the company.

76. One technology blog has described Volkswagen's defeat device as follows:

> The method by which Volkswagen diesel cars were able to thwart emissions tests and spew up to 40X the nitrogen oxide levels set by the Environmental Protection Agency was relatively simple. It was more likely no more than a single line of code used to detect when an emissions test was being performed and place the emissions system in an alternate mode — something as simple as a software "on/off" switch. Volkswagen AG CEO Martin Winterkorn, who stepping down as the result of his company's scandal, has said he had no knowledge of the emissions cheat, but software dev/test audit trails are almost certain to pinpoint who embedded the code and who authorized it. You can actually see who asked the developer to write that code," said Nikhil Kaul, a product manager at test/dev software maker SmartBear Software. "Then if you go upstream you can see who that person's boss was...and see if testing happened...and, if testing didn't happen. So you can go from the bottom up to nail everyone."[79]

77. As also noted above, 482,000 vehicles were described as affected, with over 50,000 in the state of California.[80] In testimony at the October 8 Hearing, Horn put the number at approximately 525,000 vehicles.

78. In 2013 and again in 2014, the International Council for Clean Transportation ("ICCT") published studies showing serious discrepancies between laboratory and in-use emissions of certain cars, including VW TDI Diesel cars used in Europe.[81] A decision was made to test American Clean Diesel cars to show that they were success stories; the opposite turned out to be the case. The ICCT, in conjunction with researchers at and West Virginia University's Center for Alternative Fuels, Engines and Emissions ("CAFEE") conducted on-road emissions tests on

---

[79] http://developers.slashdot.org/story/15/09/24/1423225/how-did-volkswagen-cheat-emissions-tests-and-who-authorized-it.

[80] http://www.latimes.com/business/autos/la-fi-hy-california-dmv-vw-diesel-20150921-story.html. This number excludes unregistered vehicles.

[81] http://theicct.org/sites/default/files/publications/ICCT_LabToRoad_20130527.pdf; http://www.theicct.org/sites/default/files/publications/ICCT_LaboratoryToRoad_2014_Report_English.pdf)

three vehicles sold in the United States: a 2013 TDI Passat, a 2012 TDI Jetta, and a BMW X5 SUV. These researchers found that for the Passat and Jetta, emissions were far higher than the emissions generated in the laboratory by CARB. The Jetta exceeded United States NOx emissions standard by 15 to 35 times, and the Passat by five to 20 times. In laboratory testing by CARB, in contrast, these same vehicles complied with United States NOx emissions standards. The CAFEE report is attached as Exhibit 7 to the Complaint. ICCT brought the information to the attention of CARB and the EPA, who commenced their own investigations and contacted Volkswagen. Volkswagen chalked the discrepancies up to "various technical issues and unexpected in-use conditions," but agreed in December of 2014 to recall approximately 500,000 vehicles in order to apply a "software patch."[82]

79. After the remediation, CARB in May of 2015 tested a 2012 TDI Passat on the road and in the laboratory. It found some improvement in in-use NOx emissions, but not enough. An article in the *Philly Voice* describes what happened next.

> On July 8, CARB shared its results with VW, but there was no change in Volkswagen's position. Some officials privately questioned whether Volkswagen was deliberately violating the federal Clean Air Act by installing defeat devices -- software programmed to switch engines to a cleaner mode during official emissions testing, according to a person involved in the process.
>
> During normal driving, the software then shuts off, enabling cars to emit as much as 40 times the legal limit of pollutants.
>
> In early August, Oliver Schmidt, who followed [Norbert] Krause and preceded [Stuart] Johnson in VW's U.S. engineering and environmental office, attended a conference in Traverse City, Michigan and told regulators Volkswagen stood by its conclusions that the problem was technical, people involved said.[83]

80. Then, on August 21, there was a complete reversal. The *Philly Voice* article goes on to describe what happened:

> After more than a year of stonewalling investigators, Volkswagen stunned two senior officials with the U.S. Environmental

[82] http://www.cnbc.com/2015/09/24/.

[83] http://www.phillyvoice.com/year-stonewalling-volkswagen-stunned-regulators/.

VW FOIA, EPA 06/20/2017 2017-FFP_034773

> Protective Agency and California's environmental watchdog by admitting the automaker hacked its own cars to deceive U.S. regulators about how much their diesel engines pollute.
>
> That disclosure on Aug. 21, confirmed by two people with knowledge of the exchange, shows Volkswagen buckled to pressure from environmental regulators almost a month earlier than the scandal was made public. The admission to regulators came after a year during which VW officials insisted to regulators that tests on its diesel cars showing a spike in pollution levels on the road were in error.
>
> ****
>
> At first, regulators were surprised that Volkswagen would make its confession at the conference, held in Pacific Grove, California. Minutes before Christopher Grundler, director of the EPA's transportation and air quality office, was to deliver a 9 a.m. speech to the conference, a Volkswagen representative told him about the deception. At the same meeting, representatives of the California Air Resources Board, a state agency that had been pushing VW hard, were also given a verbal notice of the deception, people with knowledge of the events said.
>
> Volkswagen declined to comment on the sequence of events described to Reuters. It isn't clear which VW representative delivered the news of the deception to Grundler and the CARB. Stuart Johnson, head of VW's engineering and environmental office in the United States, was registered to attend the Aug. 21 conference, which was organized by the University of California, Davis. Johnson, who still works for VW in Auburn Hills, Michigan, did not respond immediately to a request for comment.

81. On September 3, Volkswagen officials further laid out the use of the defeat device to regulatory representatives.[84]

82. Volkswagen was faced with the threat that the EPA it would not certify any of its 2016 models for sale in the United States until the questions surrounding the emissions discrepancies were answered. Volkswagen admitted that it relied upon a "second calibration" in the vehicles that was intended to run only during certification testing. This second calibration was triggered when a highly sophisticated software algorithm determined – after measuring factors like the position of the steering wheel, the vehicle's speed, pedal movement, and even barometric

[84] http://docs.house.gov/meetings/IF/IF02/20151008/104046/HHRG-114-IF02-Wstate-HornM-20151008.pdf.

pressure – that the car was being tested. Then it would configure the engine to reduce emissions of NOx. As David Clegern of CARB explained, "[w]e met with VW on several occasions and they continued to dispute our data, so we'd return to the lab. Over time, VW had no other explanations left, and it was our lab staff who actually got VW to admit that there was, in fact, a defeat device."[85] As another CARB spokesperson told the *Washington Post*, "[t]hey basically ran out of excuses."[86]

83. The scandal surfaced on September 18, 2015, when CARB and the EPA announced that VWAG, Audi and VWoA had illegally installed emissions testing "defeat devices" in the aforementioned vehicles. *See* Exhibits 1 and 2. The EPA found violations of 42 U.S.C. §§7522(a), 7522(a)(1) and 7522(a)(3)(B), as well as 40 C.F.R. §§86.1854-12(a)(3)(ii) and 86.1854-12(a). The EPA identified the following affected vehicles:

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGAV02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

84. As noted above, Horn of VWoA admitted that Volkswagen was dishonest with both

[85] http://www.foxnews.com/leisure/2015/09/22/for-7-years-vw-software-thwarted-pollution-regulations/.

[86] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagonsdeception-the-recall-that-never-fixed-any-cars/.

VW FOIA, EPA 06/20/2017 2017-FFP_034775

customers and regulators and Huber of VWAG called the matter a "moral and political disaster."

85. Volkswagen has ordered its dealers to cease selling the Affected Vehicles[87] and has set aside a minimum of 6.5 billion Euros ($7.2 billion) to deal with the fallout from this catastrophe, which it now concedes involved 11 million vehicles worldwide. An internal memorandum issued on September 22 details this:

Wolfsburg, 22 September 2015

Volkswagen AG has issued the following information:

Volkswagen is working at full speed to clarify irregularities concerning a particular software used in diesel engines. New vehicles from the Volkswagen Group with EU 6 diesel engines currently available in the European Union comply with legal requirements and environmental standards. The software in question does not affect handling, consumption or emissions. This gives clarity to customers and dealers.

Further internal investigations conducted to date have established that the relevant engine management software is also installed in other Volkswagen Group vehicles with diesel engines. For the majority of these engines the software does not have any effect.

Discrepancies relate to vehicles with Type EA 189 engines, involving some eleven million vehicles worldwide. A noticeable deviation between bench test results and actual road use was established solely for this type of engine. Volkswagen is working intensely to eliminate these deviations through technical measures. The company is therefore in contact with the relevant authorities and the German Federal Motor Transport Authority (KBA – Kraftfahrtbundesamt).

To cover the necessary service measures and other efforts to win back the trust of our customers, Volkswagen plans to set aside a provision of some 6.5 billion EUR recognized in the profit and loss statement in the third quarter of the current fiscal year. Due to the ongoing investigations the amounts estimated may be subject to revaluation.
Earnings targets for the Group for 2015 will be adjusted accordingly.

Volkswagen does not tolerate any kind of violation of laws whatsoever. It is and remains the top priority of the Board of Management to win back lost trust and to avert damage to our customers. The Group will inform the public on the further progress of the investigations constantly and transparently.

86. Volkswagen has indicated it will initiate a recall and remediation of the Affected Vehicles, but there is no "fix" that can be achieved that would not result in lesser mileage per gallon or degraded performance, two of the key attributes on which TDI Clean Diesel cars were

[87] *See* http://pics3.tdiclub.com/data/3209/stop-sale-note3.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_034776

sold.

> Experts Reuters spoke to indicate that two potential fixes could be needed for the two types of emissions control systems featured on 482,000 cars in the U.S., complicating the recall and refit process. Some experts opined that just a software solution could make the affected vehicles compliant with EPA regulations, reducing the performance characteristics of the engines in the process, while others suspect that a hardware solution may be needed for older vehicles without the urea injection system.
>
> A couple of experts warned that the potential solution could involve significantly increased consumption of urea, necessitating fill-ups at more frequent intervals such as every 5,000 miles, in addition to reducing the performance of the engines.[88]

The same point was made by the West Virginia AG in a complaint filed on October 2 against Volkswagen for civil penalties. It is attached as Exhibit 8.[89] In that complaint, the West Virginia AG notes that "Volkswagen will not be able to comply with the EPA [recall] order to make the Affected Vehicles comply with emissions standards without substantially degrading their performance and fuel efficiency to a level below that advertised by Volkswagen, and below that experienced by consumers prior to, or when they purchased their vehicles." Thus, there is no valid "cure" for Volkswagen's conduct.

87. At the October 8 Hearing, Horn testified that the "software solution" might apply to only 95,000 vehicles. Another 430,000 would have to be retrofiired with new hardware, a pricess that could take at least one to two years. Horn also indicated that Volkswagen would not seek certification by environental regulators of its 2016 Model Year diesel cars, due to nondisclosure of an "auxiliary emissions control device."[90]

88. Nor can any recall cure the tarnished reputation of Volkswagen's TDI Clean Diesel

---

[88] http://autoweek.com/article/car-news/vw-diesel-emissions-fix-may-require-2-solutions.

[89] The AG of Texas has also sued Volkswagen. https://www.texasattorneygeneral.gov/files/epress/01_Plaintiffs_Original_Petition_10.8.15.pdf.

[90] http://www.nytimes.com/2015/10/09/business/international/vw-diesel-emissions-scandal-congressional-hearing.html?_r=0.

vehicles and the substantial diminution of their resale value. The Kelley Bluebook has reported that prices for used Volkswagen diesel cars have declined by 21% in the last few weeks, reflecting the aftermath of Dieselgate.[91] Thus, customers not only overpaid when they bought the Affected Vehicles, but have suffered a significant diminution of the resale value of their vehicles. Indeed, a survey of 460 fleet buyers in the United Kingdom revealed that 49% of them were reconsidering their contracts with Volkswagen in the aftermath of the Dieselgate revelations.[92]

89. As noted above, the Executive Committee of the Board that accepted his retirement said that it "recognizes the economic damage caused" as well as the "loss of trust" among customers. No recall and supposed remediation can correct that.

90. A survey of vehicle owners conducted by AutoPacific[93] further reveals consumer disgust with Volkswagen. Only one in four have a positive opinion of Volkswagen, compared to three in four before the scandal. The corresponding figures for Audi were 29%, as opposed to 69%. Sixty-four percent of the survey respondents say they do not trust Volkswagen.

91. Steven Kalafer, a Volkswagen dealer, summed up the public thinking:

> "This fraud makes Madoff look like the minor leagues," Kalafer said from his dealership in Flemington, New Jersey. "It is the biggest fraud I have ever seen in all of business. Over $300 billion of these products have been sold in Europe, $15 billion [in] the United States. That dwarfs Ponzi and Madoff combined."
>
> ****
>
> "Customers are upset. They are upset that the brand they invested in, the brand they counted on, failed them," he said.
>
> ****
>
> "In all of the years that I have been in business, all of the frauds

[91] http://www.latimes.com/business/autos/la-fi-hy-auto-sales-20151001-story.html.

VW FOIA, EPA 06/20/2017 2017-FFP_034778

that I have seen, this one just takes the cake," he said.[94]

92. But the illegal conduct by Volkswagen has not just resulted in economic damage and loss of consumer trust. It has caused **the death of dozens of people in the United States over the last seven years and degraded the health of many more**. On October 3, Associated Press ("AP") laid out the facts.[95] AP calculated exhaust pollution year by year, starting with the ten to 40 times emissions level estimate by the EPA and then factored in mileage and car number totals from the Kelley Blue Book. It came up with a range of NOx pollution caused by the Affected Vehicles and then took it to scientists who modeled mortality rates, which were confirmed by a dozen experts in emissions, risk and public health, none of whom were environmental advocates or representatives of automobile manufacturers. The results are depicted in the chart that follows.

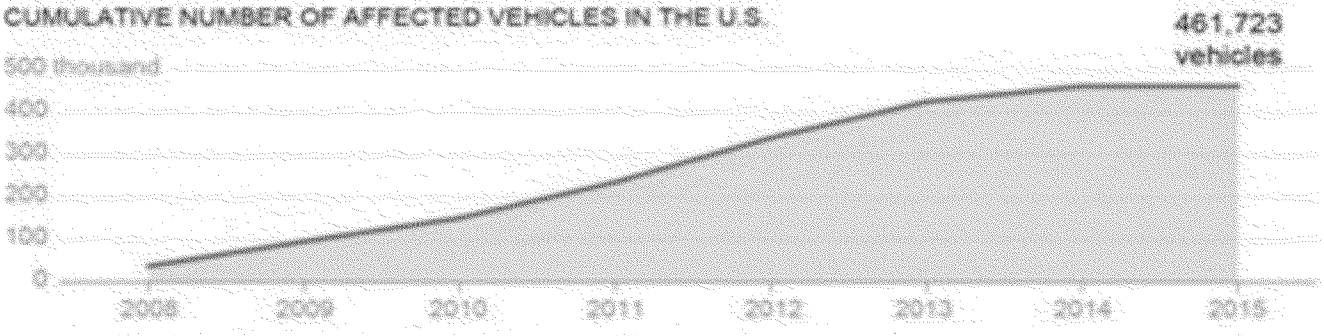
[94] http://www.cnbc.com/2015/10/07/vw-dealers-customers-feel-betrayed-by-emissions-cheating-scandal.html.

[95] http://bigstory.ap.org/article/a6925f0af82e44aaa1a1ed4b55d030f6/ap-analysis-dozens-deaths-likely-vw-pollution-dodge.

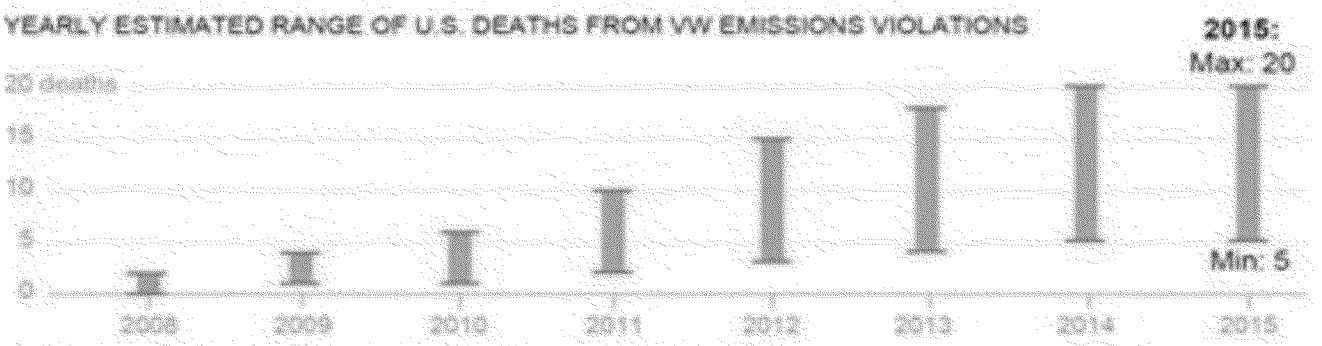
Calculating human toll of VW emissions problems

U.S. pollution resulting from Volkswagen's dodging of emissions tests is enough to have caused dozens of deaths since 2008. An AP analysis calculated upper and lower limits of pollution using the number of affected vehicles each year and average mileage. Scientists used that data in epidemiological computer models to estimate a range of deaths.

CUMULATIVE NUMBER OF AFFECTED VEHICLES IN THE U.S.

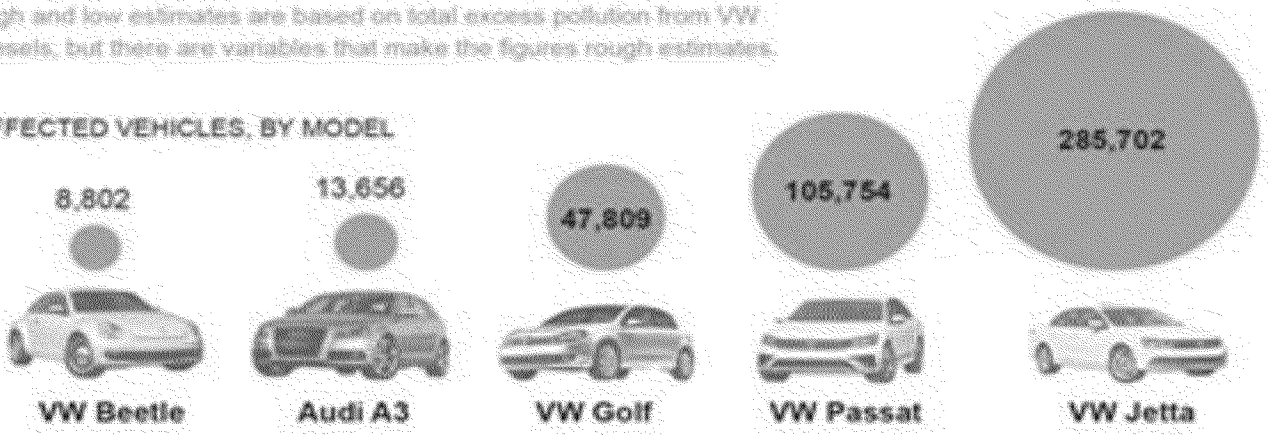


YEARLY ESTIMATED RANGE OF U.S. DEATHS FROM VW EMISSIONS VIOLATIONS



High and low estimates are based on total excess pollution from VW diesels, but there are variables that make the figures rough estimates.

AFFECTED VEHICLES, BY MODEL



NOTE: The total of 47,809 for VW Golf includes 3,530 VW Golf Sportswagen vehicles. The total figure of 461,723 is derived from Kelley Blue Book vehicle registration data. The Environmental Protection Agency estimates the total number of affected vehicles in the U.S. to be about 482,000.

SOURCES: AP analysis of data from the U.S. Environmental Protection Agency and Kelley Blue Book; Professor Peter Adams, Carnegie Mellon; Volkswagen; Audi AP

93. As the AP article notes, the Affected Vehicles spewed enough NOx over the course of seven years to significantly degrade the environment in urban areas. Eric Schneiderman, the New York AG has said that "[t]he stakes could not be higher for the health and safety of our communities who, if Volkswagen's own admissions are true, have for years been breathing air containing excess pollution from their vehicles."[96] Harris County Texas (where the City of Houston is located) has already sued Volkswagen for $100 million in harm to air quality.[97]

94. As noted in the *Minneapolis Star-Tribune* in a follow-up piece on the AP story:

> Computer software allowed VW diesel cars to spew between 10 to 40 times more nitrogen oxides (NOx) than allowed by regulation, making this "clearly a concern for air quality and public health," said Janet McCabe, acting air quality chief for the U.S. Environmental Protection Agency.
>
> Nitrogen oxides mostly form smog — that murky, dirty air that makes it hard to see and for some people to breathe — but also amplify a deadlier, larger problem: tiny particles of soot. Numerous medical studies show those tiny particles cause about 50,000 deaths a year in the United States, mostly from heart problems.
>
> Nitrogen oxides can travel hundreds of miles, so pollution spewed in Pittsburgh can be felt on the East Coast, [Carnegie Mellon environmental engineer Professor Peter] Adams said.
>
> Experts calculate how much pollution costs society by looking at the value of lost lives. In this case, Adams and other said the lost lives — valued at $8.6 million apiece — overwhelm other costs such as lost work days or hospital costs. The overall annual cost of the extra pollutants from the VW diesels ranged from $40 million to $170 million, environmental engineering professors calculated. "Even the small increase in NOx from VW diesel emissions is likely to have worsened pollution along the roadways where they have traveled, and affected the lives of hundreds of thousands of people," said Dan Greenbaum, president of the Health Effects Institute in Boston.

[97] http://www.wsj.com/articles/u-s-justice-department-conducts-criminal-probe-of-volkswagen-sources-say-1442869059.

> "To say millions of people of people are breathing poor air as the result of that is not off the mark," said Greenbaum, who runs the institute that is funded by both the EPA and the auto industry to serve as an independent arbiter of the science.[98]

95. The revelation of the scandal has led to numerous consequences in the United States. The DOJ is conducting a criminal probe of Volkswagen.[99] AGs in 30 states have initiated their own investigation.[100] A Texas judge has issued a temporary restraining order preventing the Affected Vehicles from being sold within the state. *See* Exhibit 9 to the Complaint. The Subcommittee of Oversight & Investigations of the Energy & Commerce Committee of the United States House of Representatives has initiated an investigation and sent letters to Volkswagen and the EPA.[101] The Federal Trade Commission launched an investigation after Senator Bill Nelson (D-Fl) urged the agency to look into Volkswagen's marketing of supposedly "clean diesel" vehicles.[102] Leaders of the Senate Finance Committee are also calling for VW to repay over $200 million worth of clean energy tax-credits buyers received as an incentive to purchase clean vehicles.[103] Fred Upton, the chairman of the full committee, has stated that "[t]he very notion of a carmaker intentionally violating our environmental laws is beyond belief….[R]eports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated.

[103] http://www.law360.com/articles/714146/sens-demand-vw-return-200m-in-tax-credits

Attempting to deceive regulators and customers is a double whammy of betrayal."[104] Over 200 private lawsuits have been filed, many of them class actions. Among those class actions, most involve class claims for individual statewide classes, as opposed to federal claims for nationwide classes.

96. Outside the United States, several countries are investigating Volkswagen's conduct.[105] Switzerland has banned the sale within its borders of certain Volkswagen TDI Diesel cars sold in Europe.[106] German prosecutors have raided VWAG's headquarters in Wolfsburg.[107] Prosecutors in Paris have launched an investigation for suspected "aggravated" deception of affected vehicles sold in France; French Environment Minister Segolene Royal called Volkswagen's conduct "a form of theft from the taxpayer and the state."[108] The Italian antitrust authority has also commenced an investigation, saying "Volkswagen's claims about emissions and certifications in advertising campaigns and information brochures distributed by dealers might have induced consumers to make an error in their choice."[109]

97. As noted above, Volkswagen has set aside $7.2 billion to deal with the costs of the scandal. That will not be nearly enough. James E. Tierney, a former AG in Maine, has been quoted as saying that the costs to Volkswagen might be "'incalculable,' with each false

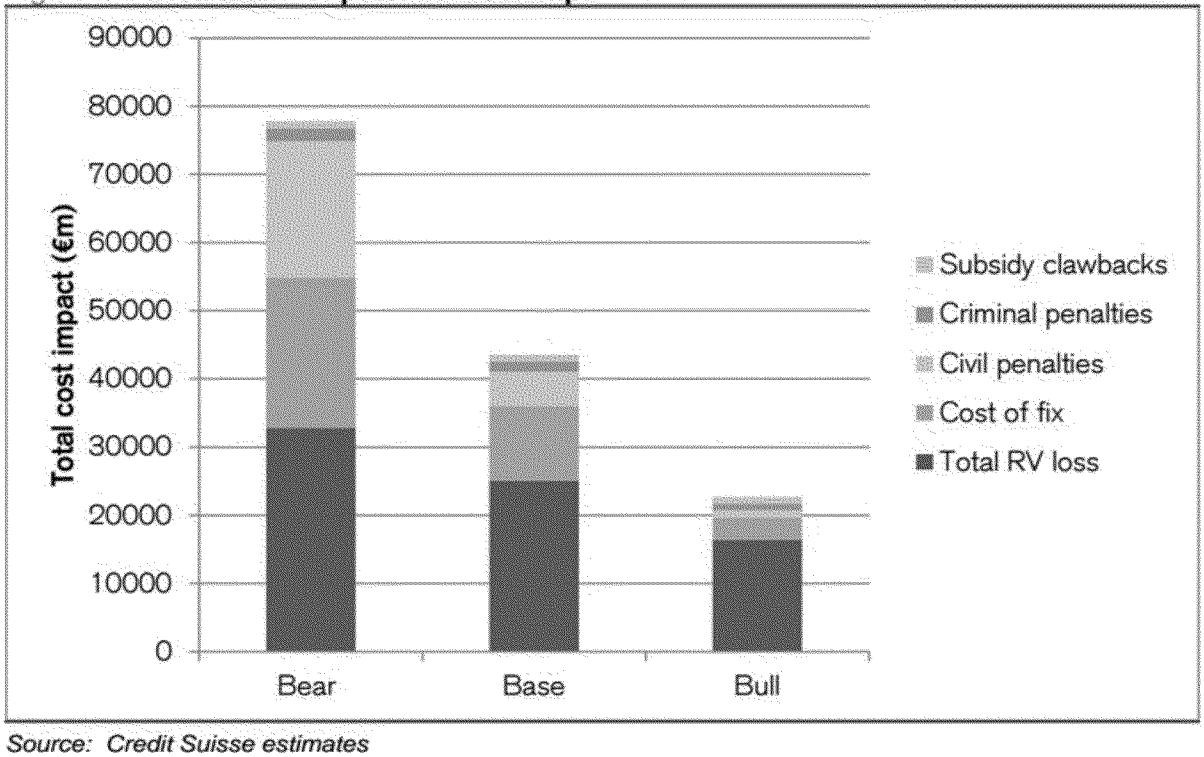
VW FOIA, EPA 06/20/2017 2017-FFP_034783

advertisement to consumers, for example, carrying a potential penalty. 'This product was designed to operate illegally, and that is very serious.'"[110]

98. Nonetheless, some attempts at calculation have been made. On October 2, Credit Suisse disseminated an analysis showing Volkswagen's anticipated costs in a "bull" scenario (where events turned out favorably to it), a "base" scenario, and a "bear" scenario (where events turned out unfavorably).[111] The "bull" scenario was $25.6 billion in costs, while the "bear" scenario was $87.1 billion. The analysis is summarized in the following chart:

Figure 17: **Breakdown of potential cost impact for VW**



Source: Credit Suisse estimates

Societe Generale has also presented dire predictions.[112] Volkswagen itself has since conceded that

[110] http://mobile.nytimes.com/2015/10/03/business/us-states-jumping-into-investigation-of-vw-emissions-deception.html?_r=0&referer=https://www.google.com/.

[111] http://www.businessinsider.com/credit-suisse-volkswagen-shares-could-fall-another-20-2015-10?r=UK&IR=T.

[112] http://www.cbsnews.com/news/emissions-scandal-could-cost-volkswagen-more-than-35-billion/.

VW FOIA, EPA 06/20/2017 2017-FFP_034784

the cost of Dieselgate will be far more than it initially anticipated.[113] As can be seen, costs associated with criminal and civil penalties make up a significant portion of the differing amounts. Credit Suisse also predicts that Volkswagen's stock may decline another 20%.

VI. PLAINTIFF'S STANDING

99. CAS is a non-profit, Section 501(c)(3) organization whose aim is to provide consumers a voice for auto safety and quality. As such, CAS has standing to bring the present action on its own and on behalf of its members.

ASSOCIATIONAL STANDING

100. CAS's membership consists of approximately 15,000 individuals, including at least 200 in the District of Columbia, 450 in Massachusetts, 1500 in California, and 300 in Michigan. CAS members pay for the benefits of membership, which includes receiving a copy of CAS's annual *Car Book*. The *Car Book* makes recommendations on the best vehicles based on CAS's research of various factors, including fuel economy. CAS members rely on the information CAS gathers to make purchasing decisions when buying a new or used vehicle. In 2013 CAS rated the AUDI A4 as one if it's overall "Best Bets," a rating that would not have been given had CAS known of Defendants' fraudulent reporting of the vehicle's fuel economy. In 2015 it recommended the Volkswagen Jetta. CAS members relied on CAS's recommendations in deciding which vehicle to buy. Had CAS known the true nature of Affected Vehicles' efficiency performance, CAS would not have rated them highly and its members would not have purchased the vehicles.

---

[113] http://www.techtimes.com/articles/92854/20151009/volkswagen-emissions-cheating-scandal-costs-five-times-more-than-expected-ceo-warns-employees-of-cutbacks.htm,

VW FOIA, EPA 06/20/2017 2017-FFP_034785

101. Many of CAS's members would have standing in their own right to bring an action in this case. CAS has identified members who purchased Volkswagen's Clean Diesel vehicles. Any member who purchased an Affected Vehicle has suffered a concrete and particularized injury by purchasing or leasing a vehicle that they would not otherwise have purchased or leased; paying more for vehicles than they would have otherwise paid if they had known the true facts concerning the defeat devices; and purchasing vehicles, the value of which has been severely diminished, thus reducing their residual and/or resale value.

102. Defendants' illegal conduct has injured all members of CAS, regardless of whether or not they purchased an Affected Vehicle, due to Volkswagen's fraudulent scheme to deceive consumers as to the non-compliance of its vehicles to applicable emissions standards, and Volkswagen's pollution of the environment by selling vehicles which emitted NOx gasses in levels ten to forty times permitted by the EPA. These injuries are a direct result of Volkswagen's fraudulent activities.

103. CAS's member's injuries will be redressed by a successful result in this matter through declaratory and injunctive relief because such relief will effectively abate Volkswagen's illegal conduct and will prevent recurrence. Specifically—relief in this matter will eliminate Volkswagen's fraud, bring Affected Vehicles into compliance with emissions standards, and thereby reduce air pollution from the 525,000 Affected Vehicles.

104. The interest CAS is seeking protect in this case is germane to its purpose as an organization. CAS aims to lower vehicle emissions and promote fuel efficiency. CAS's Safe Climate Campaign aims to "slash auto emissions" and "hold polluters . . . accountable." In pursuing this case, CAS is working directly within its mission to reduce fuel emissions and educate the public about energy efficient vehicle choices. A successful outcome in this case will deter

VW FOIA, EPA 06/20/2017 2017-FFP_034786

future vehicle manufacturers from fraudulently manipulating their vehicles' emissions performance.

105. CAS's claims do not require the individual participation of each of its members to obtain the relief that it seeks. CAS only seeks injunctive and/or declaratory relief, not damages on behalf of members. Defendants violated and continue to violate various state and federal laws by fraudulently misrepresenting the Affected Vehicles' emissions, environmental standards, fuel efficiency, and performance. These practices affected all CAS members. CAS can establish the illegality of Defendants' practices through evidence of Defendants' conduct that is common to all members.

ORGANIZATIONAL STANDING

106. CAS also has standing to bring these claims on its own behalf because Defendants' conduct has caused a diversion of its resources and has frustrated its mission. Each year, CAS spends considerable time and financial resources researching and compiling reports on the country's best vehicles, working with automakers and governments to improve the efficiency of motor vehicles and the standards that govern them, and advising members on purchasing decisions. Relying on Volkswagen's misrepresentations, CAS gave the Affected Vehicles high ratings and recommended that its members purchase those vehicles. As a result of Defendants' unlawful activities, CAS will have to divert its financial and staff resources from its planned activities.

107. CAS will have to modify its vehicle ratings system to ensure that vehicles are not circumventing emissions testing procedures to obtain better fuel economy ratings. CAS will have to redirect staff time and financial resources to new mechanisms of vehicle rating for its annual *Car Book*.

108. Through its "Safe Climate Campaign", CAS spent time and resources working to

VW FOIA, EPA 06/20/2017 2017-FFP_034787

increase emissions standards that Defendants' violated. As a result of Defendants' fraud, CAS will now have to divert its time and resources to detect possible future fraudulent actions to subvert emissions standards. CAS will have to divert resources and staff time from current programs to help members of Congress conduct oversight investigations, to develop policy solutions to solve the VW problems, and prevent future frauds. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging consumers to switch to clean cars and to make other clean transportation choices.

109. As a result of defendants' fraud, hundreds of thousands of vehicles have been polluting the atmosphere by circumventing emissions standards. This pollution has undermined CAS's activities to reduce overall air emissions. CAS must work even harder, and devote additional time and resources to its emissions reduction campaigns to reduce overall air emissions as a means of compensating for the excess pollutants the Affected Vehicles continue to spew into the atmosphere.

110. In the absence of Volkswagen's misrepresentations about their vehicles' environmental impact, fuel efficiency, and performance, CAS would not have suffered these injuries.

CAUSES OF ACTION

FIRST CLAIM

Fraudulent Business Acts and Practices in Violation of California Business & Professions Code §§ 17200, *et seq.*

111. Plaintiff incorporates by reference each preceding and succeeding paragraph.

112. Plaintiff brings this cause of action individually and on behalf of its members.

113. California Business and Professions Code §§ 17200, *et seq.* prohibits acts of unfair competition, which mean and include any "fraudulent . . . business practices."

VW FOIA, EPA 06/20/2017 2017-FFP_034788

114. As more fully described above, Defendants' acts and practices with respect to the fuel efficiency, and performance of Affected Vehicles have a tendency to deceive, and have deceived, Plaintiff and its members, thus constituting a fraudulent business act or practice.

115. Defendants acted fraudulently for the purpose of section 17200 by misrepresenting and omitting truths regarding the Affected Vehicles' eco-friendly nature, fuel efficiency, and performance in their advertising, public statements, and marketing. These fraudulent statements were a material factor in inducing CAS members to purchase Affected Vehicles. CAS members suffered injury in fact and lost money and/or property as a result of Volkswagen's unlawful business acts and practices. CAS's members suffered harm when each member was required to pay a purchase price for their Affected Vehicles which they never would have purchased if the true facts were known, or paid a price in excess of what they would have paid had Volkswagen accurately disclosed the Affected Vehicles' characteristics. These misrepresentations also resulted in higher purchase prices for the Affected Vehicles and will result in lower resale value. CAS members suffered injury in fact as a result.

116. Defendants' fraudulent statements were a material factor in inducing CAS's ratings and recommendations for Affected Vehicles, and in pursuing particular activities in furtherance of its mission and policy goals. Defendants' fraud caused CAS to inaccurately rate and report on Affected Vehicles. CAS would have used staff time and financial resources differently had Volkswagen accurately disclosed the Affected Vehicles' characteristics. As a result of Defendants' fraud, CAS will now have to divert staff time and financial resources away from its mission and goals to: adjust its rating system so it is able to detect future fraudulent subversions of emissions standards; help members of Congress conduct oversight investigations of Defendants' fraudulent actions; develop policy solutions to solve the VW problems and prevent future frauds; and devote additional resources to reducing emissions to compensate for the additional pollution caused by Volkswagen's actions. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging

VW FOIA, EPA 06/20/2017 2017-FFP_034789

consumers to switch to clean cars and to make other clean transportation choices.

117. Defendants either knew, recklessly disregarded, or should have known that Volkswagen's statements were false, misleading, untrue, deceptive, or likely to deceive or mislead the public, Plaintiff and its members.

118. Plaintiff and its members relied upon Defendants' material omissions, nondisclosures and representations to their detriment.

119. Plaintiff's members have suffered injury in fact and have lost money as a result of defendants' unfair competition and violations of law in that they purchased vehicles for prices that were grossly inflated; they would not have purchased these vehicles had they known the true efficiency and nature of the Affected Vehicles; and they would not have been exposed to pollutants from the Affected Vehicles. Defendants' conduct has caused CAS injury in fact, a diversion of resources, and frustration of its mission. Had plaintiff known the true facts plaintiff would not have rated the Affected Vehicles highly, and would have used its staff time and resources differently with respect to its mission and purpose. Plaintiff is therefore entitled to the relief available under Business and Professions Code §§ 17200, *et seq*., as detailed herein.

SECOND CLAIM
Unlawful Business Acts and Practices in Violation of California Business & Professions Code §§ 17200, *et seq*.

120. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

121. Plaintiff brings this cause of action individually and on behalf of its members.

122. California Business and Professions Code §§ 17200, *et seq*. prohibits acts of unfair competition, which mean and include any "unlawful . . . business practices."

123. As alleged herein, Defendants routinely misrepresented Affected Vehicles' emissions, environmental standards, fuel efficiency, and performance in their advertising, public statements, and marketing.

124. As a result, Defendants' uniform policies, acts, omissions, and practices, among

VW FOIA, EPA 06/20/2017 2017-FFP_034790

others, violate numerous provisions of California statutory and common law including, but not limited to the following:

- Violating the CLRA; and
- Violating California's False Advertising Law.

125. Plaintiff and its members relied upon these material omissions and misrepresentations to their detriment.

126. Plaintiff reserves the right to allege other violations of law that constitute unlawful business acts or practices based upon the above-described conduct. Such conduct is ongoing and continues to this date.

127. Plaintiff's members have suffered injury in fact and have lost money as a result of defendants' unfair competition and violations of law in that they purchased vehicles for prices that were grossly inflated; they would not have purchased these vehicles had they known the true efficiency and nature of the Affected Vehicles; and they would not have been exposed to pollutants from the Affected Vehicles. Defendants' conduct has caused CAS injury in fact, a diversion of resources, and frustration of its mission. Had plaintiff known the true facts plaintiff would not have rated the Affected Vehicles highly, and would have used its staff time and resources differently with respect to its mission and purpose. Plaintiff is therefore entitled to the relief available under Business and Professions Code §§ 17200, *et seq*., as detailed herein.

THIRD CLAIM
Unfair Business Acts and Practices in Violation of California Business & Professions Code §§ 17200, *et seq.*

128. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

129. Plaintiff brings this cause of action individually and on behalf of its members.

130. California Business and Professions Code §§ 17200, *et seq*. prohibits acts of unfair competition, which mean and include any "unfair . . . business practices."

131. Defendants' conduct constitutes "unfair" business acts and practices because

VW FOIA, EPA 06/20/2017 2017-FFP_034791

Defendants' practices have caused and are "likely to cause substantial injury" to Plaintiff and its members which injury is not "reasonably avoidable" by Plaintiff and its members and is "not outweighed" by the practices' benefits to Plaintiff and its members.

132. As more fully described above, Defendants' misrepresentations and omissions in their advertising, public statements, and marketing constitute unfair business acts or practices within the meaning of Cal. Bus. & Prof. Code §§ 17200, *et seq.*, in that the justification for Defendants' conduct is outweighed by the gravity of the consequences to the general public.

133. Defendants had reasonably available alternatives to further their business interests other than by misleading Plaintiff and its members about Affected Vehicles' eco-friendly nature, fuel efficiency, and performance. Indeed, the burden and expense of not installing the "defect device" is infinitesimal in comparison to the negative impact and injury to Plaintiff and its members.

134. Plaintiff and its members could not have reasonably avoided injury because, as more fully described above, Defendants' scheme was designed to keep Plaintiff and its members from knowing the truth about the Affected Vehicles' eco-friendly nature, fuel efficiency, and performance.

135. Defendants' failure to disclose these facts, coupled with the defeat device, made it nearly impossible for Plaintiff and its members to know the true nature of Affected Vehicles' eco-friendly nature, fuel efficiency, and performance.

136. Plaintiff and its members were never in a position to avoid injury, due to Defendants' active concealment of material information.

137. The practice of misrepresenting the eco-friendly nature of the Affected Vehicles, fuel efficiency, and performance deceived Plaintiff and its members into paying for services that were never rendered or the value of which was grossly inflated; making inaccurate recommendations on which products to buy; and focusing its staff time and resources working to increase emissions standards which were being flagrantly violated by Defendants. These actions

VW FOIA, EPA 06/20/2017 2017-FFP_034792

are contrary to public policy, immoral, unethical, oppressive, unscrupulous, and/or substantially injurious to consumers.

138. Defendants' conduct has violated statutory and common law, and the policy and spirit of California's statutory law including, but not limited to, California's Consumer Legal Remedies Act, California's Unfair Competition Law, California's False Advertising Law, and California Pollution Control laws and applicable regulations. These violations significantly harmed Plaintiff and its members.

139. Plaintiff and its members relied upon these material omissions and misrepresentations to their detriment.

140. Plaintiff's members have suffered injury in fact and have lost money as a result of defendants' unfair competition and violations of law in that they purchased vehicles for prices that were grossly inflated; they would not have purchased these vehicles had they known the true efficiency and nature of the Affected Vehicles; and they would not have been exposed to pollutants from the Affected Vehicles. Defendants' conduct has caused CAS injury in fact, a diversion of resources, and frustration of its mission. Had plaintiff known the true facts plaintiff would not have rated the Affected Vehicles highly, and would have used its staff time and resources differently with respect to its mission and purpose. Plaintiff is therefore entitled to the relief available under Business and Professions Code §§ 17200, *et seq*., as detailed herein.

FOURTH CLAIM
Violations of the Consumers Legal Remedies Act
(California Civil Code § 1750 *et seq*.)

141. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

142. This cause of action is brought pursuant to the California Consumers Legal Remedies Act ("CLRA"), Civil Code § 1750, *et seq*.

143. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated,

VW FOIA, EPA 06/20/2017 2017-FFP_034793

and continue to violate California Civil Code § 1770, subdivisions (a)(9), (a)(7), (a)(16), and (a)(5) by:

- Representing to consumers purchasing the Affected Vehicles that these vehicles' eco-friendly nature, fuel efficiency, and high performance are as advertised and publicized.
- Representing in their advertising eco-friendly nature, fuel efficiency, and performance characteristics for the Affected Vehicles that are false.

144. Plaintiff and its members have suffered harm as a result of these violations.

145. Plaintiff's members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Affected Vehicles believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Affected Vehicles and the subsequent revelation concerning these resources would otherwise have been spent in other ways will result in lower resale value. CAS members suffered injury in fact when they were exposed to greater NOx emissions than represented by Volkswagen and permitted by law.

146. Plaintiff suffered harm as a result of Volkswagen's unlawful conduct because it recommended Affected Vehicles in its *Car Book*, and directed staff time and resources in pursuance of activities it would not have pursued had Volkswagen accurately disclosed the Affected Vehicles' characteristics. Plaintiff rated Affected Vehicles, believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in CAS

VW FOIA, EPA 06/20/2017 2017-FFP_034794

having to divert staff time and financial resources away from its mission and goals to: adjust its rating system so it is able to detect future fraudulent subversions of emissions standards; help members of Congress conduct oversight investigations of Defendants' fraudulent actions; develop policy solutions to solve the VW problems and prevent future frauds; and devote additional resources to reducing emissions to compensate for the additional pollution caused by Volkswagen's actions. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging consumers to switch to clean cars and to make other clean transportation choices.

147. Volkswagen concealed from Plaintiff and its members accurate information concerning the emissions standards, fuel efficiency, and performance of the Affected Vehicles.

148. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

149. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

FIFTH CLAIM
Violations of the Michigan Consumer Protection Act
(Mich. Comp. Laws § 445.901 *et seq.*)

150. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

151. Michigan Consumer Protection Act, Mich. Comp. Laws § 445.901 *et seq.* prohibits "[u]nfair, unconscionable, or deceptive methods, acts, or practices in the conduct of trade or commerce."

152. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated, and continue to violate Mich. Comp. Laws § 445.903, subsections (a), (e), and (l) by:

VW FOIA, EPA 06/20/2017 2017-FFP_034795

- Representing to consumers purchasing the Affected Vehicles that these vehicles' eco-friendly nature, fuel efficiency, and high performance are as advertised and publicized.
- Representing in their advertising emissions, environmental, fuel efficiency, and performance characteristics for the Affected Vehicles that are false.
- Representing that the Affected Vehicles were compliant with state and federal emissions regulations.

153. Volkswagen concealed from Plaintiff and its members accurate information concerning eco-friendly nature, fuel efficiency, and performance of the Affected Vehicles.

154. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were made knowingly, and with the intent that consumers would purchase vehicles based on those representations.

155. Plaintiff's members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Affected Vehicles believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Affected Vehicles and the subsequent revelation concerning the "defeat devices" will result in lower resale value. CAS members suffered injury in fact when they were exposed to greater NOx emissions than represented by Volkswagen and permitted by law.

156. Plaintiff suffered harm as a result of Volkswagen's unlawful conduct because it recommended Affected Vehicles in its *Car Book*, and directed staff time and resources in pursuance of activities it would not have pursued had Volkswagen accurately disclosed the Affected Vehicles' characteristics. Plaintiff rated Affected Vehicles, believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made

VW FOIA, EPA 06/20/2017 2017-FFP_034796

them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in CAS having to divert staff time and financial resources away from its mission and goals to: adjust its rating system so it is able to detect future fraudulent subversions of emissions standards; help members of Congress conduct oversight investigations of Defendants' fraudulent actions; develop policy solutions to solve the VW problems and prevent future frauds; and devote additional resources to reducing emissions to compensate for the additional pollution caused by Volkswagen's actions. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging consumers to switch to clean cars and to make other clean transportation choices.

157. Volkswagen concealed from Plaintiff and its members accurate information concerning the emissions standards, fuel efficiency, and performance of the Affected Vehicles.

158. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

159. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

SIXTH CLAIM
Violations of the Massachusetts General Statute 93A
(Mass. Gen. Laws ch. 93A § 1 *et seq.*)

160. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

161. Massachusetts General Statute, Mass. Gen. Laws ch. 93A § 1 *et seq.*, prohibits "unfair or deceptive acts or practices in the conduct of any trade or commerce."

162. As more fully described above, Defendants' acts and practices with respect to the fuel efficiency, and performance of the Affected Vehicles have a tendency to deceive, and have

VW FOIA, EPA 06/20/2017 2017-FFP_034797

deceived, Plaintiff and its members, thus constituting unfair, immoral, unethical, oppressive, and unscrupulous actions. These actions included:

- Falsely representing to consumers purchasing the Affected Vehicles that these vehicles' emissions, fuel efficiency, and high performance are as advertised and publicized.
- Falsely representing in their advertising emissions, environmental, fuel efficiency, and performance characteristics for Affected Vehicles that are false.
- Falsely representing that the Affected Vehicles were compliant with state and federal emissions regulations.

163. Volkswagen concealed from Plaintiff and its members accurate information concerning the emissions standards, fuel efficiency, and performance of the Affected Vehicles.

164. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were made knowingly, and with the intent that consumers would purchase vehicles based on those representations.

165. Plaintiff's members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Affected Vehicles believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Affected Vehicles and the subsequent revelation concerning the "defeat devices" will result in lower resale value. CAS members suffered injury in fact when they were exposed to greater NOx emissions than represented by Volkswagen and permitted by law.

166. Plaintiff suffered harm as a result of Volkswagen's unlawful conduct because it recommended Affected Vehicles in its *Car Book*, and directed staff time and resources in pursuance of activities it would not have pursued had Volkswagen accurately disclosed the

VW FOIA, EPA 06/20/2017 2017-FFP_034798

Affected Vehicles' characteristics. Plaintiff rated Affected Vehicles, believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in CAS having to divert staff time and financial resources away from its mission and goals to: adjust its rating system so it is able to detect future fraudulent subversions of emissions standards; help members of Congress conduct oversight investigations of Defendants' fraudulent actions; develop policy solutions to solve the VW problems and prevent future frauds; and devote additional resources to reducing emissions to compensate for the additional pollution caused by Volkswagen's actions. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging consumers to switch to clean cars and to make other clean transportation choices.

167. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, Plaintiff and members of the consuming public will be further damaged by Volkswagen's conduct.

SEVENTH CLAIM

Violations of the District of Columbia Consumer Procedures Protection Act (DC Code § 28-3901 *et seq.*)

168. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

169. This cause of action is brought pursuant to the District of Columbia Consumer Procedures Protection Act, DC Code § 28-3901 *et seq.*

170. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated, and continue to violate California Civil Code § 28-3904, subdivisions (a), (b), (e), (f), and (x) by:

- Representing to consumers purchasing the Affected Vehicles that these vehicles'

VW FOIA, EPA 06/20/2017 2017-FFP_034799

emissions, fuel efficiency, and high performance are as advertised and publicized.

- Representing in their advertising emissions, environmental, fuel efficiency, and performance characteristics for the Affected Vehicles that are false.
- Representing that the Affected Vehicles were compliant with federal emissions regulations when they were not.

171. Plaintiff and its members have suffered harm as a result of these violations.

172. Plaintiff's members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Affected Vehicles believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Affected Vehicles and the subsequent revelation concerning the "defeat devices" will result in lower resale value. CAS members suffered injury in fact when they were exposed to greater NOx emissions than represented by Volkswagen and permitted by law.

173. Plaintiff suffered harm as a result of Volkswagen's unlawful conduct because CAS recommended Affected Vehicles in its *Car Book*, and directed staff time and resources in pursuance of activities it would not have pursued had Volkswagen accurately disclosed the Affected Vehicles' characteristics. Plaintiff rated Affected Vehicles, believing, based on Volkswagen's representations, that the Affected Vehicles had certain characteristics that made them environmentally friendly, fuel efficient, and high performance, when in fact these vehicles cannot have these fuel efficiency and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in CAS having to divert staff time and financial resources away from its mission and goals to: adjust its rating system so it is able to detect future fraudulent subversions of emissions standards; help members of Congress conduct oversight investigations of Defendants' fraudulent actions; develop

VW FOIA, EPA 06/20/2017 2017-FFP_034800

policy solutions to solve the VW problems and prevent future frauds; and devote additional resources to reducing emissions to compensate for the additional pollution caused by Volkswagen's actions. Unless new funds are raised, resources will be diverted which would otherwise have been spent in different ways, such as encouraging consumers to switch to clean cars and to make other clean transportation choices.

174. Volkswagen concealed from Plaintiff and its members accurate information concerning the emissions standards, fuel efficiency, and performance of the Affected Vehicles.

175. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

176. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray that the Court enter judgment on its behalf and on behalf of its members, and:

A. Order the appointment of an independent organization to be External Compliance Monitor to monitor Volkswagen's compliance with federal and state environmental laws, as well as any other relief granted in the ultimate resolution of this case, and provide reports annually to the Court for a period no less than five years;

B. Order Volkswagen to pay a portion of its annual net profits into an independent fund administered by third parties approved by the Court who can disburse the funds to non-profit organizations that seek to monitor, educate people about, and/or remediate the deleterious environmental effects of vehicular diesel fuel emissions through advanced emissions controls and systems;

C. Adjudge and decree that Volkswagen has violated the California Pollution Control

VW FOIA, EPA 06/20/2017 2017-FFP_034801

Laws, California Business & Professions Code, the California Civil Code, the Michigan Consumer Protection Act, and Massachusetts General Statute 93A and that Plaintiffs and its members have been injured in their business and property as a result of Volkswagen's violations;

D. To the extent provided by law, enjoin and restrain Volkswagen, its subsidiaries, affiliates, successors, transferees, assignees and the respective officers, directors, partners, agents, and employees thereof and all other persons acting or claiming to act on their behalf from continuing to violate the California Pollution Control laws, California Business & Professions Code, the California Civil Code, the Michigan Consumer Protection Act, and Massachusetts General Statute 93A.

E. Award Plaintiffs and its members their costs of this suit, including reasonable attorneys' fees as provided by law; and

F. Order such other or further relief as may be just and proper.

IX. JURY TRIAL DEMAND.

Pursuant to Federal Rule of Civil Procedure 38(b), Plaintiffs demand a trial by jury of all of the claims asserted in this Complaint so triable.

Dear Michael and Stephan,

I'm back from vacation and am now working on preparations for the Administrator McCarthy's meeting with Minister Dobrindt next week.

Can you please provide a list of the delegation members who will accompany Minister Dobrindt and advise if you have already submitted the required clearance spreadsheet? If not, I would appreciate receiving the delegation list (names and affiliations) via e-mail while you compile the rest of the data for spreadsheet. Michael is very familiar with this process but please let me know if you need me to resend the form.

Many thanks...
Anna

Subject: AW: AW: Minister's Request to Meet EPA Administrator

Dear Mark,

We talked to our colleagues in Berlin about the topics Minister Dobrindt would like to address during his visit at the EPA. The Minister would like to inform EPA of the actions the German Government has taken in light of the recent developments regarding Volkswagen. Furthermore he is interested to learn about emission standards and testing in the US and EPA's plans to further improve the process in the future. He would also like to discuss the enforcement process in general.

I am including my colleague Stephan Zass in this e-mail. He is our Transport Counsellor at the Embassy and will be able to help set up the meeting while I am out of office October 9 - 14. He will also be able to provide you with a list of the delegation that is accompanying Minister Dobrindt.

Please let us know if you have any more questions.

Best,

Michael

Subject: AW: AW: Minister's Request to Meet EPA Administrator

Dear Mark,

We talked to our colleagues in Berlin about the topics Minister Dobrindt would like to address during his visit at the EPA. The Minister would like to inform EPA of the actions the German Government has taken in light of the recent developments regarding Volkswagen. Furthermore he is interested to learn about emission standards and testing in the US and EPA's plans to further improve the process in the future. He would also like to discuss the enforcement process in general.

I am including my colleague Stephan Zass in this e-mail. He is our Transport Counsellor at the Embassy and will be able to help set up the meeting while I am out of office October 9 - 14. He will also be able to provide you with a list of the delegation that is accompanying Minister Dobrindt.
~~~~~~

Please let us know if you have any more questions.

Best,

Michael

West Virginia to lay out legal case against Clean Power Plan

By Kevin Rogers

Republicans on a House Energy and Commerce subcommittee on Thursday will give West Virginia's chief courtroom lawyer a platform to lay out his state's argument against the Environmental Protection Agency's final Clean Power Plan.

West Virginia Solicitor General Elbert Lin, who's expected to lead the courtroom attack against the agency, is among the witnesses set to testify before the Energy and Power

Subcommittee, where he plans to accuse the agency of developing a "contrived" Clean Air Act interpretation for its power plant carbon regulations.

The agency, in its final rule, argued that it can regulate power plants under both Section 111(d) and Section 112, so long as the Section 111(d) rules don't cover hazardous pollutants like mercury. Lin said that interpretation breaks with more than 20 years of protocol.

"EPA seeks to save the Power Plan by adopting an interpretation of the phrase 'regulated under [Section 112]' that the agency never suggested before litigation in the D.C. Circuit this year," Lin plans to say. "This contrived reading — invented by EPA after two decades of reading the text 'literal[ly]' — is indefensible."

Lin, who litigated a failed attempt to block the proposed rule in spring, contends that the agency doesn't have the authority to regulate power plants under both sections.

The rules, finalized in August, seek to cut emissions from the power sector by 32 percent from 2005 levels by 2030. Its rules for existing plants require states develop plans to hit specific carbon reduction goals, though it offers a variety of channels to achieve them, including replacing coal-fired power with natural gas and renewables, energy efficiency programs and cross-state emissions trading programs.

In the absence of a state-submitted plan, the agency would impose a backstop federal plan.

Lin will argue that the approach is illegal, since it goes beyond regulating the power plants and presses states shift to natural gas or renewable energy for electric generation.

"The Power Plan runs roughshod over States' constitutional rights regarding intrastate generation and use of electricity, and is thus illegal," he said. "That the Power Plan leaves States the option of not submitting State Plans does not cure these constitutional problems. If States comply and submit State Plans to reorganize their energy economies, they will become mere 'administrative agencies of the Federal Government' in this critical area of state authority."

While Lin's boss, Attorney General Patrick Morrisey, has pledged to sue the agency over the rules, legal challenges can't be filed until the regulations are published in the Federal Register.

The hearing will be overseen by Subcommittee Chairman Rep. Ed Whitfield, R-Ky., who authored a bill that would allow states to avoid complying with the Clean Power Plan until legal challenges are resolved. His bill was approved by the House, but faces a White House veto threat.

Lin will be joined in his arguments against the rule by Allison Wood, a partner at Hunton & Williams LLP, and Raymond Gifford, a partner with Wilkinson Barker Knauer LLP.

The Obama administration will not be without its defenders, however. Emily Hammond, a

law professor and associate dean at the George Washington University Law School, and Richard Revesz, a law professor and dean emeritus at the New York University of Law, will testify on the legal foundations of the regulations.

Revesz, who filed a brief in support of EPA against the proposed rule lawsuit, plans to mount a legal defense of the regulations as "consistent with the Clean Air Act and the Constitution."

"It is not, as opponents argue, an unprecedented approach raising the prospect of economic calamity, but rather just another example of EPA doing its job to ensure that polluters account for the cost of their pollution in a manner that still result in substantial net economic benefits to the public," he plans to say.

Interior HQ should go West, says candidate Bush

By Scott Sonner

RENO, Nev. (AP) — Jeb Bush said Wednesday that he would rein in regulation at the Interior Department as president and try to move its headquarters from Washington, D.C., to the West, home to 90 percent of federally owned land.

"There is a tradition of having a secretary from the West," the former Florida governor said at a discussion organized by his presidential campaign. "But the folks that actually do the work ... all live in Maryland, Virginia and Washington, D.C., and I think they ought to be living out amongst us."

The proposal was part of Bush's land and resource management plan, which is aimed at building consensus between federal, state and local governments.

Bush didn't say in his speech where he would locate the headquarters, although an outline suggested his proposed agency would do a better job of keeping in touch with the people it serves if it was based in a place like Denver, Salt Lake City or Reno.

House conservatives back Ryan, opening door to a new speaker

By Alan Fram

WASHINGTON (AP) — Backed by a majority of the pugnacious House Freedom Caucus, Rep. Paul Ryan seems all but assured of becoming the next House speaker, an ascension Republicans hope would end a month of political pandemonium that has made Congress and the GOP seem anarchic.

Meeting late Wednesday, around two-thirds of the hardline conservative group's three dozen members voted to back the Wisconsin Republican's bid for the House's top job, caucus members said. With their support the chief remaining question over whether he'd seek the job, the group's vote essentially meant the speaker's post is his for the taking when the House

formally chooses a new leader next week.

Republicans believe that by assuming command of the House, the GOP's 2012 vice presidential candidate could stem the political fratricide between the party's pragmatists and hard-right conservatives that helped force last month's startling resignation by Speaker John Boehner, R-Ohio. That conflict has also spilled over to the GOP's 2016 presidential contest, where leading candidates Donald Trump and Ben Carson have positioned themselves as outsiders and reveled in attacking establishment Republicans as relics of an outmoded era.

The Freedom Caucus' vote fell short of the 80 percent margin the group requires for an official endorsement, which Ryan had earlier demanded as a condition of seeking the post. But in a written statement afterward, Ryan erased any doubt that he considered their vote a green light to run.

Study: Strong Oklahoma quakes caused by industrial activity

By Justin Juozapavicius

TULSA, Okla. (AP) — A sharp rise in earthquakes in Oklahoma in the past 100 years is likely the result of industrial activities in the energy-rich state, such as oil and natural gas production, a new study suggests.

The paper by the U.S. Geological Survey, which singled out the state of Oklahoma, was released online this week and will be published in December's Bulletin of the Seismological Society of America. It concludes that injection of massive amounts of the byproduct of oil and gas production — chemical-laced wastewater — deep into the earth has induced the quakes.

The paper dates wastewater injection methods to the 1920s in Oklahoma. The modern-day process that produces the byproduct wastewater is known as fracking, or forcing millions of gallons of water, sand and other additives deep into the ground to free up pockets of natural gas.

Both the energy industry and scientists agree that fracking doesn't directly cause significant earthquakes. Where they part ways is what role injection of the byproduct wastewater back into the deep ground plays in inducing the quakes.

VW investigating whether more cars have trick software

Sponsored Links

By The Associated Press

BERLIN (AP) — German automaker Volkswagen says it is trying to determine whether even more of its cars may have been fitted with software that was used to cheat on U.S. emissions tests.

The company had previously said that the software was installed on cars with variants of the EA 189 diesel engine built to the "Euro 5" emissions standard.

Spokesman Pietro Zollino confirmed to the AP on Thursday a report from the dpa press agency that the company is now checking whether models with the EA 288 diesel motor built to the same emissions standard may also have the software.

Newer cars built to the "Euro 6" standard are said not to be affected.

More

Apple cleaning up act in China with more renewable energy

By Michael Liedtke

SAN FRANCISCO (AP) — Apple is cleaning up its manufacturing operations in China to reduce the air pollution caused by the factories that have assembled hundreds of millions of iPhones and iPads during the past eight years.

The world's most valuable company is working with its Chinese suppliers to eventually produce 2.2 gigawatts of solar power and other renewable energy.

The commitment announced Wednesday represents Apple's latest attempt to prevent the popularity of its devices and digital services from increasing the carbon emissions that are widely believed to changing the Earth's climate.

Apple Inc. estimates 20 million metric tons of greenhouse gas pollution will be avoided as more of its suppliers rely on renewable energy between now and 2020. That's like having four million fewer cars on the road for a year.

Defense attorney: Texas lawyer indicted over oil spill fraud

By Jeff Amy

JACKSON, Miss. (AP) — A Texas lawyer faces criminal charges after he was accused of submitting thousands of false claims for damages from the 2010 Gulf of Mexico oil spill.

Robert McDuff, a lawyer for San Antonio attorney Mikal Watts, confirmed Wednesday that Watts was indicted in Mississippi and will appear in court Oct. 29 in Gulfport.

"I look forward to a speedy trial and the opportunity to prove to a jury that I am not guilty of any crimes," Watts said in a statement.

McDuff said the indictment is sealed and he wouldn't discuss the specific charges against Watts. He said they are related to allegations that Watts committed fraud or forgery when he claimed to represent 44,000 clients in litigation against BP PLC.

LA agency to raise water rates because of conservation

By The Associated Press

LOS ANGELES (AP) — Los Angeles residents who conserved water during the drought will be paying more for using less.

The Los Angeles Daily News reports the Department and Water and Power board voted Tuesday to hike rates 4 percent in January because the utility lost money due to conservation.

The DWP estimates it received around $111 million less than expected in the last fiscal year because customers used about 10 percent less water than expected.

The hike will increase the average residential monthly bill from around $50 to $51.53. But the DWP says with less water being used, most customers will still pay less per month than in 2014.

Correction to AP story about Blankenship trial

West Virginia to lay out legal case against Clean Power Plan

By Kevin Rogers

Republicans on a House Energy and Commerce subcommittee on Thursday will give West Virginia's chief courtroom lawyer a platform to lay out his state's argument against the Environmental Protection Agency's final Clean Power Plan.

West Virginia Solicitor General Elbert Lin, who's expected to lead the courtroom attack against the agency, is among the witnesses set to testify before the Energy and Power

Subcommittee, where he plans to accuse the agency of developing a "contrived" Clean Air Act interpretation for its power plant carbon regulations.

The agency, in its final rule, argued that it can regulate power plants under both Section 111(d) and Section 112, so long as the Section 111(d) rules don't cover hazardous pollutants like mercury. Lin said that interpretation breaks with more than 20 years of protocol.

"EPA seeks to save the Power Plan by adopting an interpretation of the phrase 'regulated under [Section 112]' that the agency never suggested before litigation in the D.C. Circuit this year," Lin plans to say. "This contrived reading – invented by EPA after two decades of reading the text 'literal[ly]' – is indefensible."

Lin, who litigated a failed attempt to block the proposed rule in spring, contends that the agency doesn't have the authority to regulate power plants under both sections.

The rules, finalized in August, seek to cut emissions from the power sector by 32 percent from 2005 levels by 2030. Its rules for existing plants require states develop plans to hit specific carbon reduction goals, though it offers a variety of channels to achieve them, including replacing coal-fired power with natural gas and renewables, energy efficiency programs and cross-state emissions trading programs.

In the absence of a state-submitted plan, the agency would impose a backstop federal plan.

Lin will argue that the approach is illegal, since it goes beyond regulating the power plants and presses states shift to natural gas or renewable energy for electric generation.

"The Power Plan runs roughshod over States' constitutional rights regarding intrastate generation and use of electricity, and is thus illegal," he said. "That the Power Plan leaves States the option of not submitting State Plans does not cure these constitutional problems. If States comply and submit State Plans to reorganize their energy economies, they will become mere 'administrative agencies of the Federal Government' in this critical area of state authority."

While Lin's boss, Attorney General Patrick Morrisey, has pledged to sue the agency over the rules, legal challenges can't be filed until the regulations are published in the Federal Register.

The hearing will be overseen by Subcommittee Chairman Rep. Ed Whitfield, R-Ky., who authored a bill that would allow states to avoid complying with the Clean Power Plan until legal challenges are resolved. His bill was approved by the House, but faces a White House veto threat.

Lin will be joined in his arguments against the rule by Allison Wood, a partner at Hunton & Williams LLP, and Raymond Gifford, a partner with Wilkinson Barker Knauer LLP.

The Obama administration will not be without its defenders, however. Emily Hammond, a

law professor and associate dean at the George Washington University Law School, and Richard Revesz, a law professor and dean emeritus at the New York University of Law, will testify on the legal foundations of the regulations.

Study: Strong Oklahoma quakes caused by industrial activity

By Justin Juozapavicius

TULSA, Okla. (AP) — A sharp rise in earthquakes in Oklahoma in the past 100 years is likely the result of industrial activities in the energy-rich state, such as oil and natural gas production, a new study suggests.

The paper by the U.S. Geological Survey, which singled out the state of Oklahoma, was released online this week and will be published in December's Bulletin of the Seismological Society of America. It concludes that injection of massive amounts of the byproduct of oil and gas production — chemical-laced wastewater — deep into the earth has induced the quakes.

The paper dates wastewater injection methods to the 1920s in Oklahoma. The modern-day process that produces the byproduct wastewater is known as fracking, or forcing millions of gallons of water, sand and other additives deep into the ground to free up pockets of natural gas.

Both the energy industry and scientists agree that fracking doesn't directly cause significant earthquakes. Where they part ways is what role injection of the byproduct wastewater back into the deep ground plays in inducing the quakes.

VW investigating whether more cars have trick software

Sponsored Links

By The Associated Press

BERLIN (AP) — German automaker Volkswagen says it is trying to determine whether even more of its cars may have been fitted with software that was used to cheat on U.S. emissions tests.

The company had previously said that the software was installed on cars with variants of the EA 189 diesel engine built to the "Euro 5" emissions standard.

Spokesman Pietro Zollino confirmed to the AP on Thursday a report from the dpa press agency that the company is now checking whether models with the EA 288 diesel motor built to the same emissions standard may also have the software.

Newer cars built to the "Euro 6" standard are said not to be affected.

Apple cleaning up act in China with more renewable energy

By Michael Liedtke

SAN FRANCISCO (AP) — Apple is cleaning up its manufacturing operations in China to reduce the air pollution caused by the factories that have assembled hundreds of millions of iPhones and iPads during the past eight years.

The world's most valuable company is working with its Chinese suppliers to eventually produce 2.2 gigawatts of solar power and other renewable energy.

The commitment announced Wednesday represents Apple's latest attempt to prevent the popularity of its devices and digital services from increasing the carbon emissions that are widely believed to changing the Earth's climate.

Apple Inc. estimates 20 million metric tons of greenhouse gas pollution will be avoided as more of its suppliers rely on renewable energy between now and 2020. That's like having four million fewer cars on the road for a year.

Defense attorney: Texas lawyer indicted over oil spill fraud

By Jeff Amy

JACKSON, Miss. (AP) — A Texas lawyer faces criminal charges after he was accused of submitting thousands of false claims for damages from the 2010 Gulf of Mexico oil spill.

Robert McDuff, a lawyer for San Antonio attorney Mikal Watts, confirmed Wednesday that Watts was indicted in Mississippi and will appear in court Oct. 29 in Gulfport.

"I look forward to a speedy trial and the opportunity to prove to a jury that I am not guilty of any crimes," Watts said in a statement.

McDuff said the indictment is sealed and he wouldn't discuss the specific charges against Watts. He said they are related to allegations that Watts committed fraud or forgery when he claimed to represent 44,000 clients in litigation against BP PLC.

LA agency to raise water rates because of conservation

By The Associated Press

LOS ANGELES (AP) — Los Angeles residents who conserved water during the drought will be paying more for using less.

The Los Angeles Daily News reports the Department and Water and Power board voted Tuesday to hike rates 4 percent in January because the utility lost money due to conservation.

The DWP estimates it received around $111 million less than expected in the last fiscal year because customers used about 10 percent less water than expected.

The hike will increase the average residential monthly bill from around $50 to $51.53. But the DWP says with less water being used, most customers will still pay less per month than in 2014.

Correction to AP story about Blankenship trial

Sponsored Links

CHARLESTON, W Va. (AP) — In a story about coal ex-CEO Don Blankenship's criminal trial published by EnergyGuardian Wednesday evening, AP incorrectly stated the role of former assistant prosecutor Mike Hissam. He helped investigate the Upper Big Branch mine, not build the case against Blankenship, before becoming a defense attorney.

A corrected version of the story can be viewed here

EXHIBIT C

INSTRUCTIONS

1. This Request is a continuing request. You must promptly supplement your response in the event that you learn that you possess responsive documents or information not yet produced, or gain possession, custody or control of responsive documents or information after initially responding to this Request.

2. For both paper and electronic records, provide documents in their original language and, if the original language is not English, an English translation.

3. Paper documents should be produced in legible copies, organized by request and, within each request, by component and custodian. For electronically stored information, including but not limited to computer files or disks, produced in response to this information request:

   a. Provide detailed instructions sufficient to enable the federal government to access and retrieve the data contained in each such file or disk.
   b. Deliver emails in their native format, preferably from the database (folder) itself and not as individual emails. Microsoft Outlook emails should be delivered for each custodian in PST format; Lotus Notes emails should be delivered in NSF format. Other emails should be produced in comparable formats.
   c. If VW maintains responsive information in a commercially available software format for spreadsheets, word processing documents, presentations, photographs, etc. (e.g., Microsoft Excel, Corel WordPerfect), then:
      i. Files should be delivered in their native format.
      ii. Native files should be collected using a method that preserves all of the files' metadata, folder location and generates a "hash" value for verification that an exact copy of the file was collected.
      iii. Files should be organized on the media in folders by component and custodian.
      iv. AutoCAD Files, GIS Data, and other compound files should be produced in native format on its own media. A native file viewer should also be included in order to view the data.
   d. If VW maintains responsive information in an enterprise database or archiving system, the system must be made available to the government for inspection including any manuals, field lists, data dictionaries, indices, etc. for the government to use to formulate methods for identifying and extracting responsive information into a usable form. Information identified as responsive within the system must be extracted in a forensically sound manner and provided with documentation of the procedures used to identify and extract the responsive information from the system.
   e. VW shall not de-duplicate its production without prior notice to and consultation with the EPA.
   f. Label all media with the name of the company, the source of the information, and a tracking

number.

g. Ensure that all submissions of electronic data are free of computer viruses and that all passwords protecting files or media are removed or provided with the media.

4. Where documents or information necessary for a response are not in your possession, custody, or control, indicate in your response why such information is not available or in your possession, custody or control, and identify any source that either possesses or is likely to possess such information.

5. All submitted documents should be copies and not original documents. Provide two complete sets of the requested documents and information.

6. Indicate on each document produced the number of the question to which it corresponds.

7. Where VW has previously submitted to the EPA or the California Air Resources Board (CARB) information requested herein, re-submit the information in the format requested. Identify the material that was previously provided, the date on which it was provided, and the person at the EPA or CARB to whom it was provided.

Subject: Catalytic Converter Warranty
20150928_152720_001.jpg
Ex. 6 150763383.pdf

Michael Hennard

Senior Manager - Emissions Compliance EEO

Volkswagen Group of America

3800 Hamlin Road

Auburn Hills, MI 48326

Mr. Hennard,

It has been brought to the EPA's attention from consumers Ex. 6 that while their 2008 VW Touareg (VIN Ex. 6) registered a catalytic converter failure at 79,886 miles, by the time they brought the vehicle into a VW dealership, the odometer read 80,051 miles, whereupon the dealership informed them VW could not perform the necessary repair under the federal emission warranty. They were also informed that even though the diagnostic test was done by an independent shop, if the diagnostic were to have been done by the dealership, the result regarding the emission warranty coverage would have been the same.

The Ex. 6 have appealed the denial of emission warranty coverage to Volkswagen's customer care center, which notified the Ex. 6 that as a result of their investigation, they are upholding the denial of the Ex. 6 warranty claim.

Verifiable evidence exists of the catalytic converter failure occurring within the mileage limitation, and while the odometer exceeded the 80,000 threshold by the time the vehicle was brought into the VW dealership, it does not reflect a situation where the consumer continued to drive the vehicle and accumulate an excessive amount of mileage, perhaps into the thousands, before bringing the vehicle into the dealership with the expectation of having their emission warranty honored. Rather, this vehicle would be approximately 50 miles over the 80,000 mile

warranty, while keeping in mind that the failure was recorded at just less than 120 miles under the 80,000 expiration.

This situation appears as one where the consumer made a reasonable effort to have their concern addressed under the federal emission warranty, including an appeal to Volkswagen's customer care, and that this customer has a legitimate argument to have their warranty claim recognized by the manufacturer.

As a result, the EPA request that Volkswagen please reconsider their position regarding the Ex. 6 warranty claim of the failed catalytic converter on their Touareg, and to perform the necessary repair under the emission warranty.

Kind Regards,

Terry Gordinier

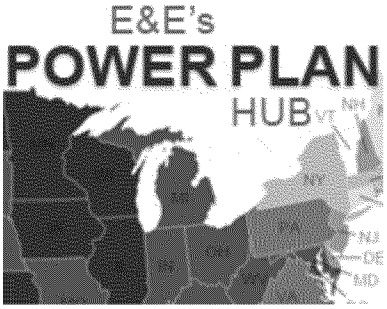
CLEAN POWER PLAN:

Final rule will be in tomorrow's *Federal Register*

Amanda Reilly, E&E reporter

Published: October 22, 2015 at 9:46 AM

The Obama administration's landmark rule to stem carbon dioxide emissions from existing power plants will be published in tomorrow's *Federal Register*.



The publication of the Clean Power Plan will set off a flurry of legal activity, with several states expected to immediately request a stay of the contentious rule. Fifteen states filed a lawsuit to block a draft of the rule, but their challenges were premature before the publication of the rule.

To secure a stay of the rule, opponents must prove they will face irreparable harm if the rule is in effect.

U.S. EPA finalized the rule in early August, and some critics have accused the agency of attempting to stall challenges by delaying publication. But EPA has maintained that it sent the rule to the *Federal Register* under an expedited schedule.

EPA's final rule to address carbon dioxide emissions from new and modified power plants, as well as its draft federal implementation plan for states that do not comply with the Clean Power Plan, are also scheduled to be published tomorrow.

ENERGY MARKETS:

Supreme Court's challenge: Fit new grid into old law

Robin Bravender, E&E reporter

Published: Wednesday, October 21, 2015

What happens when you try to fit an evolving electric grid into an 80-year-old statute?

Lawsuits wind their way to the Supreme Court.

In a move that surprised energy experts, the high court has decided to hear at least two cases this year that deal with how to regulate evolving electricity markets. It's an unusual amount of attention being paid by the high court to complex energy policies, and many attribute the heightened scrutiny to the rapidly changing nature of the grid and electricity markets.

"It's a great celebration of the 80th anniversary of the statute," said Jim Rossi, a law professor at Vanderbilt University who specializes in energy law. "In many ways, I think what's at issue here is whether an old New Deal statute can work effectively in managing a dynamic new interstate market that just didn't exist when the statute was passed."

The statute in play: the Federal Power Act, which in 1935 gave the Federal Energy Regulatory Commission the power to regulate interstate electricity transmission and wholesale energy rates.

The intricacies of that law are now being tested in two major Supreme Court cases. In the first, argued

last week before the court, justices are weighing whether a government "demand response" program to encourage consumers to slash electricity use surpasses FERC's authority. In the second -- just teed up this week for consideration later this term -- the justices will consider a related question about whether state programs to provide incentives for new power generation cross into FERC's territory.

The complex cases are being closely watched by a wide range of parties including federal regulators, states, power companies and environmentalists. And the court's decisions in both cases could have a major impact on the future of programs like demand response and state and federal efforts to set new energy policies.

"Everybody in the energy industry who I know is pretty familiar with these cases," Rossi said.

The court's decision could bring clarity to those looking for boundaries that weren't laid out explicitly in the Federal Power Act.

"There's a real need from the perspective of regulators at both the state and federal level to try to work out what the boundaries are," Rossi said, particularly as federal regulators are trying to push the electric power industry toward greater efficiency and some states are pursuing their own aggressive renewable energy policies. "There is some real concern in the industry; investors want certainty."

Ari Peskoe, an energy fellow at Harvard Law School's Environmental Policy Initiative, said it's surprising the court decided to take back-to-back FERC cases.

"Hopefully, these two decisions combined will give a lot of clarity in an area that I think really needs it," he said. "This section of the Federal Power Act was written 80 years ago, and it hasn't changed, but the industry has."

There's some concern among those watching the case that the court could split 4-4 in the demand response case due to a recusal by Justice Samuel Alito, simply upholding the lower court's decision and offering little guidance on the boundaries.

"The investment outlook is very important, whether you're a utility or independent generator or demand response provider or renewable energy provider because of the long life of the assets that you're being called upon to invest in," said Christi Tezak, an analyst at ClearView Energy Partners. "The industries' investors are very curious; they are watching this closely."

Impact on Clean Power Plan

The court's decisions could also affect compliance with the Obama administration's landmark Clean Power Plan -- a rule to curb greenhouse gases from the power sector.

"To the extent that the Clean Power Plan envisions states adopting policies that will promote lower-carbon sources of energy -- whether those sources of energy are renewable power, nuclear power or natural gas -- as part of those programs, states are very invested in putting in place incentives, subsidies, other programs to encourage new investment in these sources of energy," Rossi said.

"It's precisely those types of incentives and the form that those incentives take" that's being challenged in the case about states encouraging new power generation, he added. "So what's at core here is really what energy federalism will tolerate states doing to promote certain sources of energy against the backdrop of interstate markets, which FERC regulates."

Joseph Hall, a partner at Dorsey & Whitney and co-chairman of the firm's energy industry group, said the Obama administration rule "contemplates that states will require utilities to substitute the use of higher-

emission CO2 fossil-fuel-fired generators with lower or zero-emitting generators, presumably through a combination of shifting from coal-fired units to increased reliance on natural gas generation and renewables.

"The idea that states cannot interfere with FERC's jurisdiction over wholesale markets is not new, but depending on its scope, an order by the Supreme Court finding that states cannot set rules that interfere with the way that generation resources are dispatched in wholesale markets may have a direct impact on a cornerstone of the carbon plan," Hall added.

Tezak, however, said she isn't expecting the court's rulings to have a big impact on compliance with the Clean Power Plan, which prods states to develop plans to slash power plant emissions to comply with federal reduction limits.

In the demand response case, she said, "I think it's relevant, but a bit oblique," because EPA has acknowledged the role of demand response as a way to help avoid emissions.

In the second case involving incentives for state generation, she added, "I would suggest that the question before the court is not whether or not a state can define the environmental parameters of generation. That was never in dispute." That case centers on a natural gas plant and is about the ability to provide power when called upon, she said, whereas renewable energy is often variable and intermittent.

"Their ability to participate for the context of this state case is apples and steak," Tezak said. "It's not even really an orange."

CLIMATE:

Greens hail 'breakthrough' as Clinton faults FERC's record

Hannah Northey, E&E reporter

Published: Wednesday, October 21, 2015

Democratic presidential front-runner Hillary Clinton's criticism of the Federal Energy Regulatory Commission for failing to fully weigh concerns about climate change and the impacts of energy development on communities is being praised by environmentalists who have been protesting the agency's work on natural gas projects.

Speaking at a town hall meeting at New Hampshire's Keene State College last week, Clinton said FERC hasn't done enough to consider local opposition, safety issues and, most notably, climate change.

"Right now, [FERC's] mandate seems to be only about delivery of energy at anywhere, any time, and I don't think that's adequate in today's world," Clinton said. "If we're going to have a national commitment to do something about climate change, FERC needs to be part of that national commitment, and that's my view on how we have to alter a lot of parts of the federal government."

Clinton's comments came in response to a question on the Northeast Energy Direct project, a Kinder Morgan gas pipeline that would intersect 17 towns in the Granite State. Bipartisan New Hampshire lawmakers have urged federal watchdogs to make sure the public has a say in FERC's reviews (*E&E Daily*, July 21).

Although Clinton said she only became familiar with the opposition to FERC reviews after traveling through New Hampshire, activists who have for months protested on FERC's doorstep, interrupted

meetings and organized climate marches said her comments symbolized national recognition of the problem and are essentially a game changer.

"We think this is a big deal," said Ted Glick, national campaign coordinator for the Chesapeake Climate Action Network. "I'd personally call it a breakthrough.

"She is echoing what Beyond Extreme Energy and many other groups have been saying," he added, "that FERC needs to change to get with the up-and-coming renewables-based electrical/energy system."

Clinton said the concerns residents have raised with FERC's reviews are "legitimate" because the agency is employing a process that doesn't give enough weight to public opinion in areas intersected by natural gas pipelines.

She also vowed to put pressure on the commission for improvements if she wins the White House.

The agency "does not pay, in my opinion, enough attention to all of the other issues, whether they be health issues, safety issues and the like," Clinton said. "I am going to do what I can to try to make it absolutely the case that FERC has to, in any of these decisions, pay much more attention to local communities and listen to what your concerns are and do much more to evaluate whatever the consequences or the downsides of these decisions are."

But she stopped short of endorsing one commenter's accusation that the agency is funded by the oil and gas industry.

"They are certainly, as a regulator for oil and gas, used to paying attention to what oil and gas industry says, I'll absolutely give you that," Clinton said.

Environmental groups have for months pushed FERC to examine the effect of proliferating projects tied to the U.S. natural gas boom on global warming, arguing that the National Environmental Policy Act requires such assessments before projects move on.

But FERC has repeatedly stood its ground in saying there's no reliable formula for weighing the effects on the environment of emissions from any pipeline, compressor station or export terminal. The agency has also said it can't measure a project's indirect effects, such as how one pipeline might spur more drilling for gas (*Greenwire*, Oct. 20, 2014).

In July, Clinton unveiled an energy platform that includes vows to vastly expand the nation's solar capacity by 2020 and ensure that renewable energy sources contribute to at least a third of the nation's energy generation. She has also said she will back an expansion of the renewable fuel standard and work to end tax benefits to the fossil fuel industry (*Greenwire*, July 27).

But Clinton at the town hall meeting said natural gas can serve as a bridge fuel as the nation transitions away from fossil fuels to cleaner energy sources, and credited the Obama administration with curbing greenhouse gas emissions from gas production. She also said the White House had convinced her that hydraulic fracturing is appropriate in some places and not in others.

"If a local government says, 'No, not here,' they should be able to do that," Clinton said. "We have to move away from fossil fuels, including gas, but that gas can be a useful bridge, especially as we move away from coal and we move away from dirtier oil and some of the really bad alternatives."

FEDERAL WORKFORCE:

Employees could see pay cuts if Ryan wins speaker

Published: Wednesday, October 21, 2015

Federal workers can expect Rep. Paul Ryan (R-Wis.) to come down hard on their paychecks if he becomes the next speaker of the House.

During his four years leading the House Budget Committee, Ryan spearheaded legislation that would have raised pension contributions with no benefit increase, killed a retirement program for certain government staffers, eliminated student loan reimbursements and cut jobs.

The bills died in the Senate, which was then controlled by Democrats.

"Ryan demonstrated a belief that government is the cause of all the woes in this country," said William Dougan, president of the National Federation of Federal Employees.

"The Path to Prosperity," the name for his fiscal 2015 budget proposal, promised to balance the budget in part by slashing almost $140 billion from federal employees through pay freezes, pay reductions and benefit cuts, a report from House Budget Committee Democrats argued.

Budget Committee ranking member Chris Van Hollen (D-Md.) called Ryan's plan "a straight-out 5 percent pay cut."

Jessica Klement, legislative director for the National Active and Retired Federal Employees Association, said Ryan becoming speaker would be an ominous sign based on his voting record.

"I'm not optimistic," she said (Joe Davidson, *Washington Post*, Oct. 20). **-- DTB**

CLEAN POWER PLAN:

'Assume the rule will survive,' former EPA chief tells states

Amanda Reilly, E&E reporter

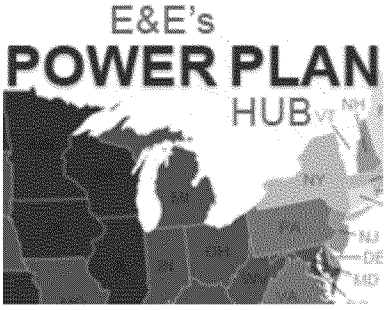
Published: Wednesday, October 21, 2015

Former U.S. EPA Administrator William Reilly said today the Clean Power Plan would survive legal challenges, urging regulators to start writing state plans.

Reilly -- who was President George H.W. Bush's EPA chief -- criticized Republican elected officials who have publicly opposed EPA's bid to reduce the power sector's carbon footprint and said it would be a "bad idea" to not write state implementation plans, or SIPs, to comply with the program.

"Move ahead with planning and assume the rule will survive," he told an Environmental Council of the States meeting in Washington, D.C.

Finalized in early August, EPA's Clean Power Plan aims to reduce carbon dioxide emissions from existing power plants. While Reilly said he was "under no illusion that meeting the objectives of the Clean Power Plan will be easy or straightforward," he said he believed EPA had put forth a flexible final program that would allow for collaborations between states and faster adoption of renewable forms of energy.



In his speech today, Reilly criticized congressional Republicans broadly for not believing that climate change was a problem.

"Many of the governors take a similarly dim view of the science of climate change and also would repudiate the rule," he said. "Several governors and legislatures have said they will not allow their regulators to submit state implementation plans. That would be a bad idea."

Reilly cast the decision of writing a state implementation plan as a choice between following the law or politics. He warned that in states that don't submit plans, Congress had sent an "unmistakable message" through the cooperative-federalism framework of the Clean Air Act that EPA would step in to protect public health with a federal implementation plan.

"I suspect that in the end, none of the governors and attorneys general ... want to see the agency write their implementation plan," he said. "They may be partisan, but they're not stupid."

Fifteen states filed a lawsuit to block the draft of the rule, and when the final version was unveiled, they petitioned for an emergency stay. When the rule is published in the *Federal Register*, their challenges will no longer be premature, and opponents are likely to file petitions for review and ask the court to stay the rule.

While he said the Clean Air Act was far from an ideal tool to address climate change, Reilly said that EPA was working within the authority given to it by Congress to reduce carbon dioxide emissions.

Reilly said that opponents who are pushing for a stay will be hard-pressed to prove to a court that the rule will cause immediate damage, since any effects are likely to be far in the future. He said that he expected the rule would hold up against the various legal challenges.

"My own expectation is even if elements of the rule are disapproved," he said, "most of what it contemplates will survive."

In addition to his work at EPA, Reilly has served as president of the World Wildlife Fund and currently sits on the board of Texas-based Energy Future Holdings Corp.

Paul Bailey, senior vice president of federal affairs and policy for the American Coalition for Clean Coal Electricity, told regulators at the ECOS meeting to not rush into making plans, arguing instead that the rule had a "very good chance" of getting struck down.

"How far do you go to make irrevocable commitments considering this program could be overturned in court?" Bailey said.

Reilly praised electric utilities for steps they've already taken to reduce carbon dioxide emissions but said the power sector, as a major generator of CO2, must move further and faster to avert "potentially catastrophic climate events," he said.

Quoting Pope Francis' encyclical calling for moral action to address climate change, Reilly said he believes state air regulators are the "unsung heroes on whom we all depend" and that the politics would catch up to actions they take to address climate change.

"The culture is moving ahead of the politics on climate, and where culture leads, the politics eventually and inevitably follows," Reilly said. "The clean power rule is on the right side of history."

WHITE HOUSE:

Admin launches Twitter account on climate

Kevin Bogardus, E&E reporter

Published: Wednesday, October 21, 2015

The White House has launched a new Twitter account to get out its message on climate change.

Yesterday, @FactsOnClimate began sending out tweets on support from administration officials, businesses and lawmakers for taking action against climate change.

"Get the facts on how @POTUS is combating climate change in the U.S. and mobilizing the world to #ActOnClimate," reads the Twitter account's bio.

The account also links to a White House webpage, espousing President Obama's efforts to combat climate change, including U.S. EPA's Clean Power Plan, which aims to reduce carbon emissions from power plants.

The Twitter account is part of a renewed push on the environment by the Obama administration ahead of next month's high-stakes international climate negotiations in Paris.

The White House has been looking to gin up support for a strong deal coming out of the talks. Earlier this week, the president rolled out private-sector backing for action on climate with more companies signing onto a White House pledge that the Paris negotiations produce a "strong step forward" in controlling global warming (*Greenwire*, Oct. 19).

PUBLIC OPINION:

75% of Americans now believe in climate change -- poll

Published: Wednesday, October 21, 2015

More than three-quarters of Americans believe that climate change is happening, according to a poll released yesterday, but views on environmental and energy topics still appear to be closely tied to political affiliation.

The University of Texas poll found that the number of climate change believers had risen by 11 percentage points to 76 percent from five years ago. But the split between political parties is still wide; 90 percent of Democrats believed climate change was occurring compared with 59 percent of Republicans.

"Political ideology continues to be the single greatest determinant of Americans' views on climate change," UT Energy Poll Director Sheril Kirshenbaum said in a statement (Jennifer Dlouhy, *Fuel Fix*, Oct. 20). **-- BTP**

ENERGY EFFICIENCY:

Dyson accuses rivals of Volkswagen-style deception

Published: Wednesday, October 21, 2015

In a mirror of this year's Volkswagen scandal, a British appliance company is accusing two European rivals of misleading consumers about the energy use of their vacuums.

Dyson Ltd. is suing Bosch and Siemens AG on the grounds that independent testing shows some of their products can use more than double their rated electricity draw under certain conditions. In particular, the products appear to increase their power as the machines suck up dust, compared with testing situations that have little dust.

"Bosch has installed control electronics into some of its machines to wrongfully increase energy consumption when in use -- to cheat the E.U. energy label," owner James Dyson said. "Their behavior is akin to that seen in the Volkswagen scandal."

In response, BSH Home Appliances, the manufacturer of the Bosch and Siemens brands, defended its "long and proud tradition of stringent testing."

"All Bosch and Siemens vacuum cleaners are measured in compliance with European energy regulations. Appliance performance at home is consistent with laboratory performance -- and any suggestion to the contrary is grossly misleading" (Press Association/London *Guardian*, Oct. 21). **-- BTP**

NATIONAL LABS:

Oak Ridge official tapped to lead NREL

Ariel Wittenberg, E&E reporter

Published: Wednesday, October 21, 2015

An Oak Ridge National Laboratory official will take the helm of the National Renewable Energy Laboratory next month.

Martin Keller was tapped by the Alliance for Sustainable Energy, which manages NREL for the Department of Energy, to take the helm vacated by the retirement of Dan Arvizu in March. Arvizu worked for the alliance for more than 10 years and led its successful contract bid to manage NREL in 2008.

PEOPLE

Keller, who will start Nov. 30, is currently Oak Ridge's associate laboratory director for energy and environmental sciences. In that role, he oversaw the lab's programs on biosciences, environmental sciences, building, technologies, transportation, climate change, manufacturing and electrical systems.

"I've been impressed by both the quality of the research and the impact that NREL is having nationally and globally in enabling the transformation of energy systems," Keller said in a statement. "I am looking forward to becoming a part of NREL's future success."

Assistant Secretary for Energy Efficiency and Renewable Energy David Danielson said Keller's work in clean energy innovation at Oak Ridge will serve as a foundation for leadership at NREL.

"I look forward to working with Martin hand in hand as strategic partners to deliver the technologies and solutions that will create American leadership in the transition to a global clean energy economy," he said.

AIR POLLUTION:

Researchers who tested Volkswagen diesels didn't expect scandal

Published: Wednesday, October 21, 2015

The researchers at West Virginia University's Center for Alternative Fuels, Engines and Emissions and the group that commissioned them to study U.S. diesel car emissions had no idea they would uncover a massive scandal.

"We thought the vehicles would be clean," said John German, U.S. co-director of the International Council on Clean Transportation. "We had no cause for suspicion." The group had contracted the WVU scientists to study American clean diesel cars made by Volkswagen and BMW in a bid to figure out how the automakers had met America's tough emissions standards and whether their approach could be implemented in European cars.

The researchers thus began to test the cars under a variety of driving conditions and stumbled on the deception. After recalibrating their instruments several times, the researchers eventually realized that Volkswagen vehicles were emitting five to 35 times more than the legal amount of emissions while driving, despite emitting normal emissions under testing conditions.

After sharing the results with Volkswagen, the team was contacted by several people from the company about the tests, and the issue eventually seemed to fade. The scientists assumed that there was some error in the models tested and that Volkswagen was working to correct it.

"We didn't hear anything more from them, so we fully assumed that they had made some recalls," said Daniel Carder, head of the WVU center (Lawrence/Elgin/Silver, Bloomberg, Oct. 21). **-- BTP**

JAPAN:

Fukushima worker will receive workers' comp for cancer

Published: Wednesday, October 21, 2015

Japan has agreed to pay workers' compensation to a man who developed leukemia after working to clean up the Fukushima Daiichi nuclear power plant.

Yesterday, the country's Ministry of Health, Labor and Welfare said the man's cancer could have been caused by radiation from the damaged plant -- the first such acknowledgment since the 2011 accident at the plant (*Greenwire*, Oct. 20).

The man was one of more than 40,000 workers who helped clean up the Fukushima Daiichi plant after it suffered multiple meltdowns following a tsunami. Several of those workers have since been diagnosed with cancer and are pursuing compensation from public insurance or plant owner Tokyo Electric Power Co. (Jonathan Soble, *New York Times*, Oct. 20). **-- BTP**

CLIMATE:

Former DOE official McConnell says power plan a forced renewable portfolio standard

Published: Wednesday, October 21, 2015

Does the Clean Power Plan help spur carbon capture and storage technology innovation and investments? During today's OnPoint, Charles McConnell, executive director of Rice University's Energy and Environment Initiative and a former assistant secretary of Energy at the Department of Energy, discusses the Obama administration's fossil energy strategy and the challenges ahead for technological innovation. He also explains why he believes the Obama administration has been "disingenuous" about its plans for an all-of-the-above energy strategy.

MEETING WITH EUROPEAN COMMISSION VICE PRESIDENT FOR ENERGY UNION MAROŠ ŠEFČOVIČ

DATE: October 23, 2015
LOCATION: Alm Conference Room
TIME: 11:00 – 11:30 a.m.
FROM: Anna Phillips, OITA

I. PURPOSE

Vice President Šefčovič *[SHEF-cho-veech]* requested this meeting to reaffirm the importance of cooperation with the U.S. on energy and climate issues. He is particularly interested in discussing EU and U.S. efforts to address the Volkswagen case, but he also may raise preparations for UNFCCC COP 21 in Paris and the Montreal Protocol.

Vice President Šefčovič was recently appointed to oversee the EU's efforts to respond to the Volkswagen case. According to the U.S. Mission to the EU, this decision was due to his stature and proven track record as a highly effective diplomat as he personally negotiated the gas deal between Russia and Ukraine and he was responsible for developing and selling the EU's Energy Union Strategy to 28 EU Member States. A brief biography is attached.

Current EU emissions testing regimes are much less rigorous than those in the United States. In addition, the European Commission does not have direct testing or enforcement authority and must rely on individual Member States to take those actions. Therefore, it is still unclear what steps the European Commission will be able to take in response to this case. Recent news coverage provides additional context and selected articles are attached for reference.

While in Washington, Vice President Šefčovič will meet with Energy Secretary Ernest Moniz, the White House, Department of State, U.S. Senate, World Bank, IMF and will speak at the Johns Hopkins University School of Advanced International Studies. The original purpose of his visit to Washington was to co-chair the U.S. - EU Energy Council with Secretary of State John Kerry but the meeting was cancelled at the last minute due to Secretary Kerry's recent decision to travel to the Middle East.

Vice President Šefčovič assumed his responsibilities as part of the new European Commission which took office in November 2014 for a five-year term. At the initiative of incoming European Commission President Jean Claude Juncker, a new matrix management structure was created which established six Vice Presidents responsible for cross-cutting issues who coordinate and oversee the work of other Commissioners with related and sometimes overlapping portfolios.

Vice President Šefčovič's mandate includes responsibility for establishing a European Energy Union (infrastructure connectivity, enforcement and competition); preventing energy shortages, diversifying energy sources and improving energy security; improving energy efficiency, especially for buildings (with a binding target of 30% less energy use by 2030); and ensuring that the EU reaches its climate and energy targets for 2020 and 2030.

This is your first meeting with Vice President Šefčovič. You recently met with EU Commissioner for Environment, Maritime Affairs and Fisheries Karmenu Vella in September.

II. PARTICIPANTS

Attendees
- Vice President Šefčovič
- Caroline Vicini, Deputy Chief of Mission, EU Delegation (Embassy) to the United States
- Juraj Nociar, Head of Cabinet of Vice President Šefčovič
- Bernd Biervert, Deputy Head of Cabinet of Vice President Šefčovič
- Jeffery Piper, International Relations Officer, Directorate-General for Energy
- Fabrice Vareille, Minister Counselor for Environment, Energy and Transport, EU Delegation
- Michael Koplovsky, Minister Counselor, Economic Affairs, U.S. Mission to the EU, Brussels

Staff
- YOU
- Jane Nishida, OITA
- Chris Grundler, OAR/OTAQ
- Cynthia Giles, OECA
- Evan Belser, OECA
- William Niebling, OAR
- Benjamin Hengst, OAR
- Mark Kasman, OITA
- Anna Phillips, OITA

III. AGENDA: This will be an informal discussion with no set agenda.
- YOU will start the meeting by welcoming participants and offering brief opening comments.
- Vice President Šefčovič will provide a brief overview of relevant issues from the EU perspective followed by a general discussion.

IV. PRESS: This is a closed meeting with no press attendance.

V. TALKING POINTS: Talking points are attached with key messages in bold.

VI. ATTACHMENTS
- Talking Points
- Biography of Vice President Šefčovič
- Selected News Articles

EPA Staff Contact: Anna Phillips, OITA; 202-564-6419

VW FOIA, EPA 06/20/2017 2017-FFP_034877

TALKING POINTS:

- Vice President Šefčovič *[SHEF-cho-veech]*, it is a pleasure to welcome you to EPA. I always appreciate the opportunity to exchange experiences with European partners so that we can learn from each other and meet our common challenges.

- I recently had the pleasure of meeting with Commissioner Vella who I understand is a member of your team at the European Commission.

- **Volkswagen's violations are egregious and serious.**

  - On September 18, EPA sent a Notice of Violation of the Clean Air Act to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. alleging that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards. These cars contain software that turns off emissions controls when driving normally, and turns them on when the car is undergoing an emission test.

  - Known as a "defeat device," this design feature results in the cars emitting up to 40 times the amount of NOx emissions that are allowed to ensure public health is protected.

  - The Volkswagen violations are very serious. Not only because the illegal defeat device results in excess NOx pollution at levels up to 40 times the allowable standard, but also because VW was concealing the facts from EPA, the State of California, and from consumers.

  - Using a defeat device in cars to evade clean air standards is illegal and a threat to public health.

- **EPA and CARB together are taking action.**

  - Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters.

- **EPA's oversight testing is robust and has been successful.**

  - We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations. It is this oversight that ensures both the benefits of clean air emissions standards; that industry is competing on a level playing field; and that consumers are getting what they pay for.

  - Our regulatory programs for cars and trucks are working. We know this because air quality monitors tell a clear and compelling story: U.S. air quality has dramatically improved as a result of implementing our program, even as vehicle miles and the economy have grown significantly.

  - EPA and California's motor vehicle programs have been very successful at delivering on our agencies' missions to protect human health and the environment.

Background: EPA issued a notice of violation (NOV) of the Clean Air Act (CAA) to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. on September 18, 2015. The NOV alleges that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards for certain air pollutants. The software produced by Volkswagen is a "defeat device," as defined by the Clean Air Act. California also issued its own In-Use Compliance letter to Volkswagen on September 18.EPA and the California Air Resources Board have both initiated investigations based on Volkswagen's alleged actions.

U.S. and European vehicle emission control programs differ in several important ways.

Structurally, EPA has comprehensive responsibility and authority to set vehicle emission standards, certify that vehicles meet those standards before they can be sold, monitor compliance of production vehicles throughout their useful life, and enforce compliance with the standards. Europe also requires manufacturers to secure up-front approval that vehicles meet emission standards. However, unlike EPA's certification process, the EU allows manufacturers to obtain that approval from commercial test labs. The labs must be certified by a member state but manufacturers may choose any certified lab in any member state for the testing. Europe's in-use oversight is also different. The only in-use compliance requirement is that manufacturers randomly test a small sample of their own vehicles and report the results to authorities. Each member state has its own enforcement authority and protocols.

U.S. and European emission standards and test procedures also differ in several ways including stringency. The U.S. NOx standard to which the VW defeat device vehicles were certified was significantly more stringent than the European NOx standard. In addition, the U.S. required much more rigorous test procedures than the EU did to measure compliance with those standards.

EPA adopted a 5-cycle test requirement as part of its Tier 2 emission standards, which phased in starting in MY 2004. The additional cycles were developed to address high-emission conditions such as high-speed, aggressive driving, low temperatures, and heat load/air conditioning use that had not been captured by the previous city and highway driving cycles. Europe also has recognized and is moving to address the gap between emissions measured over its lab testing cycles and real-world road driving. Europe plans to implement new test cycles that capture certain additional operational modes starting with 2017 models. Of course, it is still possible to deliberately defeat known test cycles, which is why we have now incorporated unpredictable procedures to detect defeat devices during certification and as part of our in-use monitoring program.

UNFCCC COP 21 (if raised):

- EPA continues to foster our relationships with other countries to address global climate change both bilaterally and by participation in UNFCCC international negotiations for which the State Department has the lead for the U.S. Government.

- The United States is fully engaged in the effort to deliver a strong agreement in Paris.

- On March 31, the U.S. announced a target to reduce climate pollution 26-28% below 2005 levels in 2025. This target is both ambitious and achievable. It is consistent with achieving deep, economy-

wide reductions of over 80 percent by 2050. It roughly doubles the pace of emission reductions for the period 2020-2025 as compared to 2005-2020.

- We also have intensified focus on bolstering our domestic resilience to climate change.

Montreal Protocol (if raised):

- The United States, Canada, and Mexico have modified our HFC amendment approach for a two-step process to phase down HFCs:
  - adopt a more limited HFC amendment at the 2015 MOP, and
  - agree to negotiate the rest of the phasedown and other aspects in 2016.

- This approach is our best chance to adopt an amendment this year. We remain committed to the overall ambition of our proposed amendment, and we will revisit the rest in 2016.

- Our overall objectives on HFCs are very similar, and we want to work together.

- **There are two key aspects that may still divide us:**

  - **First, you use a basket approach including both HCFCs and HFCs together, whereas we phase down HFCs alone. I'd urge you to consider whether our simpler approach of addressing HFCs will work for you, as the basket approach you suggest is not a typical Montreal approach and introduces a lot of complexity.**

  - **Second, you are still pushing for a full non-Article 5 (developed) phasedown even if Article 5 (developing) countries only commit to a freeze. We propose limiting our reductions to the first two of the four steps for non-Article 5 because:**

    1. **It gives us something to offer for the negotiations in 2016;**
    2. **Some of our developed country partners have reservations about the last two steps so we will have to push them very hard to get there; and**
    3. **It introduces excessive differentiation just before COP 21 where we are trying to avoid differentiation.**

VW FOIA, EPA 06/20/2017 2017-FFP_034880

- **We also urge your Member States to send a strong signal that they are prepared to provide the financial support necessary for Article 5 to meet HFC obligations. The June G-7 statement on finance for an amendment should be helpful in this regard.**

VW Scandal Exposes Cozy Ties in Europe's New Car Tests

By DANNY HAKIM and GRAHAM BOWLEY

OCT. 14, 2015

LONDON — Three diesel cars were taken out for a trial run last year by a German engineering and testing company. Employees at the company, TÜV Nord, drove the cars in Stuttgart and in Munich, and in suburbs, on country roads and on highways.

What they found was that all of the cars — a Volkswagen, a BMW and a Mazda — gave off far more pollutants than they did in lab tests, in some cases, more than six times the limit under new European regulations. For TÜV Nord, the research was just another confirmation of the shortcomings of the existing European lab tests.

The Hanover-based TÜV Nord knows as much as any company about how diesels perform on the road and in the lab. Widely regarded for its engineering expertise, the company has been a major force in developing a more accurate testing process for Europe's cars, which is expected to be introduced in the next year or so.

But the scandal at Volkswagen has exposed the deep conflicts in the chummy world of European emissions testing, where car manufacturers hire outside firms to certify their pollution controls in laboratories. Not only is TÜV Nord at the forefront of finding a new testing regimen for automakers, but it is also the company that signed off on VW's emissions tests in Europe.

Many of Volkswagen's vehicles, the automaker admitted last month, included software programmed to cheat on laboratory emissions tests. Given TÜV Nord's testing expertise, the situation raises questions about what, if anything, it knew about VW's tactics. And it highlights the weaknesses in a system that relies on contractors paid by carmakers to carry out the tests.

Since Volkswagen admitted the deception, TÜV Nord has been largely silent. A spokeswoman declined to comment on the specifics of the Volkswagen case, including whether the vehicles it tested were programmed to thwart laboratory tests, or if it had raised concerns about the vehicles' performance on the tests.

In an email, the spokeswoman said little beyond confirming that "TÜV Nord performs emission measurements within the framework of the approval process for models of different vehicle manufacturers (among others for VW)."

Who conducts emissions tests and how they are done remains a central question on both sides of the Atlantic after the Volkswagen scandal. While regulators in the United States allow automakers to do their own testing, the American system is seen as more robust than Europe, because the Environmental Protection Agency conducts random tests of its own.

Although Volkswagen's deception was particularly egregious, testing firms in Europe are generally seen as assisting automakers employ what are legal strategies to help their vehicles reduce their pollution in a lab in ways they never could on the road. Among other problems with the process, automakers in Europe can run their tests on preproduction cars that may not perform like the cars that ultimately come off the assembly line.

"Testing companies assist with the distortion of laboratory test results to produce artificially low results," said Greg Archer, the clean vehicles program manager at Transport & Environment, an advocacy group. "We have testing organizations that are working for the carmakers, exploiting all the loopholes that they can in an obsolete testing procedure."

TÜV Nord, which is privately held, has its roots as one of a number of trade associations set up to inspect steam boilers in 19th-century Germany. Now it has more than 10,000 employees around the world and inspects everything from satellite components to computer networks, and operates a food testing laboratory in Pune, India.

While one of TÜV Nord's promotional videos notes its "objective outside viewpoint," the company has a close relationship with Volkswagen, which goes beyond emissions testing.

TÜV Nord has also worked for Volkswagen in the United States; its engineers spent a week auditing environmental compliance at the carmaker's plant in Chattanooga, Tenn., before production started in 2011. One of the members of TÜV Nord's supervisory board, Stephan Schaller, has also been an executive at both Volkswagen and BMW during his tenure on the TÜV board.

This spring, TÜV Nord's chairman, Guido Rettig, posed for a photograph next to Martin Winterkorn, then the chief executive of Volkswagen. Both men smiled as Mr. Rettig awarded Mr. Winterkorn and Volkswagen with an oversized certificate for overall quality excellence "throughout its entire organization," according to a news release.

"It testifies to the outstanding work of everyone at VW," Mr. Winterkorn said at the time.

Following the Volkswagen scandal, automakers have publicly embraced the on-road tests that TÜV Nord and other groups are helping develop in Europe, though they are also lobbying behind the scenes to make them much easier to pass.

None dispute that their cars emit more on the road than they do in the precise conditions of lab tests, as studies have shown. Volkswagen did not respond to requests for comment, but the two other companies involved in the TÜV Nord test last year acknowledged such differences.

"The driver may brake and accelerate more frequently, and ascend steeper slopes than is done during testing," said Graeme Fudge, a Mazda spokesman. "All of these factors will increase engine emissions."

VW FOIA, EPA 06/20/2017 2017-FFP_034884

Michael Rebstock, a spokesman for BMW, said the company supported "rapid introduction of the new regulations to create clarity for consumers and the industry as quickly as possible."

Concerns about diesel pollution have long festered in Europe, where diesels are more popular than anywhere else, and regulators have spent several years trying to develop tests outside laboratories. The United States has required such tests on large diesel trucks since a similar cheating scandal in 1998, but Europe's will be the first required for cars by regulators anywhere.

With its extensive research, TÜV Nord, which has been developing portable testing equipment for trucks for more than a decade, was a natural partner on the project. The company has been a regular presence at a technical working group advising policy makers in Brussels, the seat of the European Commission.

Even environmental advocacy groups have sought TÜV's help. Transport & Environment has taken part in discussions about the new European tests and has used TÜV Nord for one of its own studies.

The International Council on Clean Transportation, which oversaw the independent tests of diesel emissions that led to the Volkswagen scandal, is currently collaborating on a study with TÜV Nord of emissions from diesel-electric hybrid vehicles.

Vicente Franco, a researcher at I.C.C.T. who has taken part in meetings in Brussels with officials from TÜV Nord, said the company "made meaningful contributions that were meant to make the on-road tests more robust."

Still, Mr. Franco conceded that the interconnectedness underscores the vulnerabilities of the system. "There is a financial dependency between the technical services and manufacturers that at some point should be rethought to improve the confidence in the system, but this is a long-term process, and it takes a lot of political will," he said.

Many policy makers have faulted the passive role played by regulators and believe there is a need for far more independent tests. Regulation in Europe is handled by each of the 28 member states, and there is little enforcement.

"We are definitely against having self-regulatory tests, because obviously they are not working," said Miriam Dalli, a Social Democrat from Malta who sits on the European Parliament's environmental committee. "We need an independent testing system."

Giovanni La Via, the chairman of the Parliament's environmental committee, says there needs to be a new European agency to oversee car testing in the 28 member states.

"European institutions react after a scandal," said Mr. La Via, a member of the center-right European People's Party, the largest bloc in the Parliament. "We need to use the same procedure for all the car producers. We cannot maintain 28 different systems."

Danny Hakim reported from London, and Graham Bowley from Wolfsburg, Germany.

Dieselgate: More EU countries join call for stricter emission tests

EurActiv (Oct 20) - Several EU member states including major automaker France will urge Europe's pollution regulator to thoroughly assess the consequences of the Volkswagen emissions scandal, according to a document seen by AFP Monday (19 October). "The environmental dimension needs to be clearly assessed and highlighted," said the letter, which was addressed to the EU's 28 environment ministers ahead of talks on October 26 in Luxembourg.

"The case could have a direct bearing on the total emissions of a country, and might have an impact on efforts by all member states to fulfill their (emission) obligations ... and meet air quality standards in the EU," the letter said.

The letter, dated Monday, was written by Austria and Denmark and officially backed by France, the Netherlands, Slovenia and Luxembourg. It did not involve Germany, the home of auto giant Volkswagen that is under fire for massive cheating on emission tests.

The actual target of the letter is the European Commission, the EU's regulatory arm that sets emission rules across the 28-country bloc, but without any power of oversight, which remains with national authorities.

The Commission must "give a concise overview of the actions and measures being taken to clarify the magnitude of the manipulation of diesel cars," the letter said.

The six countries also urged the swift introduction of real-driving tests that are widely known to stamp out the sophisticated cheating carried out by Volkswagen in laboratory tests.

At issue is the date when the real driving tests should be enforced and what delay should be allowed before emissions limits are policed fully. The introduction of these tests "needs to be taken forward more quickly," the letter said. Officially, the real-life tests will begin in January, but only for reference.

The executive's proposal, which remains unofficial, allows car companies until 2019 to fully implement the new standard, a delay seen as unjustified by activists. In its own letter to ministers, Belgium said full implementation should take place no later than 2017.

But the pressure on European governments to not overly upset the auto industry is huge, especially as the economic fallout of the VW scandal remains unknown. According to industry data, the auto sector is responsible for about 12 million jobs across the EU, where economic growth remains sluggish and joblessness is still a concern.

EU countries warn of Volkswagen scandal fallout

AFP (Oct 19) - Several EU member states including major automaker France will urge Europe's pollution regulator to thoroughly assess the consequences of the Volkswagen emission scandal, according to a document seen by AFP Monday.

"The environmental dimension needs to be clearly assessed and highlighted," said the letter, which was addressed to the EU's 28 environment ministers ahead of talks on October 26 in Luxembourg.

"The case could have a direct bearing on the total emissions of a country, and might have an impact on efforts by all member states to fulfil their (emission) obligations ... and meet air quality standards in the EU," the letter said.

The letter, dated Monday, was written by Austria and Denmark and officially backed by France, the Netherlands, Slovenia and Luxembourg. It did not involve Germany, the home of auto giant Volkswagen that is under fire for massive cheating on emission tests.

The actual target of the letter is the European Commission, the EU's regulatory arm that sets emission rules across the 28-country bloc, but without any power of oversight, which remains with national authorities.

The Commission must "give a concise overview of the actions and measures being taken to clarify the magnitude of the manipulation of diesel cars," the letter said.

The seven countries also urged the swift introduction of real-driving tests that are widely known to stamp out the sophisticated cheating carried out by Volkswagen in laboratory tests.

At issue is the date when the real driving tests should be enforced and what delay should be allowed before emission limits are policed fully.

The introduction of these tests "needs to be taken forward more quickly," the letter said.

Officially, the real-life tests will begin in January, but only for reference.

The Commission proposal, which remains unofficial, allows car companies until 2019 to fully implement the new standard, a delay seen as unjustified by activists.

In its own letter to ministers, Belgium said full implementation should take place no later than 2017.

But the pressure on European governments to not overly upset the auto industry is huge, especially as the economic fallout of the VW scandal remains unknown.

According to industry data, the auto sector is responsible for about 12 million jobs across the EU, where economic growth remains sluggish and joblessness is still a concern.

MEETING WITH GERMAN MINISTER OF TRANSPORT AND DIGITAL INFRASTRUCTURE ALEXANDER DOBRINDT

DATE: October 27, 2015
LOCATION: Alm Conference Room
TIME: 11:00 a.m. – 12:00 p.m.
FROM: Anna Phillips, OITA

I. PURPOSE

Minister Dobrindt requested this meeting to discuss the Volkswagen case. He would like to inform EPA about the actions that the German government has taken and will take in response. He also is interested to learn about emission standards and testing in the United States, EPA's plans to further improve the testing process in the future, and learning more about the U.S. enforcement process. Current EU emissions testing regimes are much less rigorous than those in the United States.

Minister Dobrindt has been designated to lead the German government's response to the Volkswagen case. The German Federal Motor Transport Authority, or KBA, recently demanded the recall of 2.4 million cars in Germany after rejecting Volkswagen's proposals to fix vehicles fitted with the software designed to cheat on emissions tests. This mandatory recall is expected to lead to callbacks throughout Europe, where diesel cars comprise more than half of the market. Recent news coverage provides additional context and selected articles are attached for reference.

Minister Dobrindt has been in his position since December 2013. A member of the German Bundestag (Parliament), he has experience and remains active at all levels of government. A brief biography is attached.

This is your first meeting with Minister Dobrindt. The discussion will build on a productive conference call between OTAQ and German Ministry senior staff on this issue in late September.

II. PARTICIPANTS

Attendees
- Minister Dobrindt
- Hans Peter Wittig, German Ambassador to the United States
- Ekhard Zinke, President, Federal Motor Transport Authority (KBA)
- Gerold Reichle, Director-General, Department of Aviation
- Sebastian Rudolph, Director-General, Department of Communication
- Tobias Miethaner, Director-General, Department of Digital Society

- Petra Bethge, Director of International Relations and Foreign Trade
- Benedikt Kuhn, Director of Communications
- Immanuel Wolf, Office of International Relations and Foreign Trade
- Nicole Schreiter, Personal Assistant to Minister Dobrindt
- Stephan Zass, Counselor for Transportation and Digital Infrastructure, German Embassy
- Michael Weber, Energy Policy Advisor, German Embassy
- Konstantina Makridou, Interpreter

Staff
- YOU
- Jane Nishida, OITA
- Chris Grundler, OAR
- Cynthia Giles, OECA
- Evan Belser, OECA
- William Niebling, OAR
- Benjamin Hengst, OAR
- Mark Kasman, OITA
- Anna Phillips, OITA

III. AGENDA

This will be an informal discussion with no set agenda.

- YOU will start the meeting by welcoming the participants and offering very brief introductory comments.
- Minister Dobrindt will provide a brief overview of relevant issues from the EU perspective followed by a general discussion.

IV. PRESS: This is a closed meeting with no press attendance.

V. TALKING POINTS: Talking points are attached, with key messages in bold.

VI. ATTACHMENTS
- Talking Points
- Biographies of Minister Dobrindt and Ambassador Wittig
- Selected News Coverage

EPA Staff Contact: Anna Phillips, OITA; 202-564-6419

VW FOIA, EPA 06/20/2017 2017-FFP_034889

TALKING POINTS:

- Minister Dobrindt, Mr. Ambassador, it is a pleasure to welcome you to EPA. I always appreciate the opportunity to exchange experiences with European partners so that we can learn from each other and meet our common challenges.

- I was pleased to learn that our staffs have already been in touch to exchange initial information regarding the Volkswagen case and we hope that they found the conversation useful.

- **Volkswagen's violations are egregious and serious.**

  - On September 18, EPA sent a Notice of Violation of the Clean Air Act to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. alleging that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards. These cars contain software that turns off emissions controls when driving normally, and turns them on when the car is undergoing an emission test.

  - Known as a "defeat device," this design feature results in the cars emitting up to 40 times the amount of NOx emissions that are allowed to ensure public health is protected.

  - The Volkswagen violations are very serious. Not only because the illegal defeat device results in excess NOx pollution at levels up to 40 times the allowable standard, but also because VW was concealing the facts from EPA, the State of California, and from consumers.

  - Using a defeat device in cars to evade clean air standards is illegal and a threat to public health.

- **EPA and CARB together are taking action.**

  - Working closely with the California Air Resources Board (CARB), EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters.

- **EPA's oversight testing is robust and has been successful.**

  - We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations. It is this oversight that ensures both the benefits of clean air emissions standards; that industry is competing on a level playing field; and that consumers are getting what they pay for.

  - Our regulatory programs for cars and trucks are working. We know this because air quality monitors tell a clear and compelling story: U.S. air quality has dramatically improved as a result of implementing our program, even as vehicle miles and the economy have grown significantly.

  - EPA and California's motor vehicle programs have been very successful at delivering on our agencies' missions to protect human health and the environment.

Background: EPA issued a notice of violation (NOV) of the Clean Air Act (CAA) to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. on September 18, 2015. The NOV alleges that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards for certain air pollutants. The software produced by Volkswagen is a "defeat device," as defined by the Clean Air Act. California also issued its own In-Use Compliance letter to Volkswagen on September 18.EPA and the California Air Resources Board have both initiated investigations based on Volkswagen's alleged actions.

U.S. and European vehicle emission control programs differ in several important ways.

Structurally, EPA has comprehensive responsibility and authority to set vehicle emission standards, certify that vehicles meet those standards before they can be sold, monitor compliance of production vehicles throughout their useful life, and enforce compliance with the standards. Europe also requires manufacturers to secure up-front approval that vehicles meet emission standards. However, unlike EPA's certification process, the EU allows manufacturers to obtain that approval from commercial test labs. The labs must be certified by a member state but manufacturers may choose any certified lab in any member state for the testing. Europe's in-use oversight is also different. The only in-use compliance requirement is that manufacturers randomly test a small sample of their own vehicles and report the results to authorities. Each member state has its own enforcement authority and protocols.

U.S. and European emission standards and test procedures also differ in several ways including stringency. The U.S. NOx standard to which the VW defeat device vehicles were certified was significantly more stringent than the European NOx standard. In addition, the U.S. required much more rigorous test procedures than the EU did to measure compliance with those standards.

EPA adopted a 5-cycle test requirement as part of its Tier 2 emission standards, which phased in starting in MY 2004. The additional cycles were developed to address high-emission conditions such as high-speed, aggressive driving, low temperatures, and heat load/air conditioning use that had not been captured by the previous city and highway driving cycles. Europe also has recognized and is moving to address the gap between emissions measured over its lab testing cycles and real-world road driving. Europe plans to implement new test cycles that capture certain additional operational modes starting with 2017 models. Of course, it is still possible to deliberately defeat known test cycles, which is why we have now incorporated unpredictable procedures to detect defeat devices during certification and as part of our in-use monitoring program.

PETER WITTIG

GERMAN AMBASSADOR TO THE UNITED STATES

Peter Wittig has served as German Ambassador to the United States since April 2014.

Prior to this, he was German Ambassador to the United Nations in New York and represented Germany during its tenure as a member of the UN Security Council from 2011 until 2012. There, he drew on his wide expertise in United Nations matters, having previously served as Director-General for United Nations and Global Issues at the German Foreign Office in Berlin and having been posted to the German Permanent Mission in New York in the late 1980s.

Wittig joined the German Foreign Service in 1982. He has also served in Madrid, at the headquarters as the private secretary to the Foreign Minister, and as Ambassador both in Lebanon and then in Cyprus. He was the German Government Special Envoy on the "Cyprus question" (the division of Cyprus). He has acquired extensive knowledge of the Middle East.

Before starting his career in the German Foreign Service, Wittig studied history, political science, and law at Bonn, Freiburg, Canterbury, and Oxford universities and taught as an assistant professor at the University of Freiburg. His wife, Huberta von Voss-Wittig, has worked as both a journalist and a writer. The couple has four children: Valeska, Maximilian, Augustin, and Felice.

Germany says Volkswagen could have broken EU law

Brussels, 19/10/2015 (Agence Europe) - According to a decision made by the Federal Motor Transport Authority (Kraftfahrt-Bundesamt - KBA) on Thursday 15 October, as reported in the German newspaper, Bild Zeitung, Volkswagen has systematically used cheat devices, which would have clearly broken European law.

The German newspaper's article is based on a letter from the German Transport Minister, Alexander Dobrindt, who quotes Article (5, 2) of EC Regulation 715/2007 "on type approval of motor vehicles with respect to emissions from light passenger and commercial vehicles (Euro 5 and Euro 6) and on access to vehicle repair and maintenance information". The article in question focuses on the requirements and tests carried out during the trials and categorically prohibits cheat devices, "which reduce the effectiveness of emissions control systems".

The article includes, however, three exceptions to this ban, when: the device is justified in terms of engine protection against damages or accidents and to ensure vehicles function in perfect safety; that they are only activated when the engine starts; or when "the conditions are substantially included in trial procedures for verifying evaporation related emissions and average emissions from the rear exhaust pipe". In the same regulation, another article (3.10) is quite clear about cheat devices, namely, "in all conceptualisation elements used for temperature detection, vehicle speed, engine speed in revolutions / minute, transmission, vacuum or any other parameter for the purpose of activating, modulating, delaying or deactivating the operation of any part of the emission control system, which reduces the effectiveness of emission control system under conditions which may reasonably be expected to be in operation and normal vehicle use".

According to some observers, this decision provides a possibility for member states to pursue the German manufacturer in the courts. Article 13 of the same regulation highlights the obligation incumbent on member states to sanction manufacturers that have breached the above-mentioned requirements and to do so in a way that is efficient, proportionate and dissuasive.

There are five kinds of infringements: false declarations during registration or recall procedures; the falsification of registration test results or those pertaining to service compliance; concealing data or technical specifications that could lead to a recall or withdrawal from registration; the use of cheat devices and, finally, a refusal to grant access to information. (Original version in French by Pascal Hansens)

BLOOMBERG BUSINESS

VW Will Recall 8.5 Million Rigged Diesels After German Hard Line

Volkswagen recall in Europe will last beyond the end of 2016

German authorities rejected VW's offer of voluntary repairs

Updated on October 15, 2015 — 4:09 PM EDT

Volkswagen AG will embark on one of the biggest recalls in European automotive history, affecting 8.5 million diesel vehicles, after German authorities threw out the carmaker's proposal for voluntary repairs.

The Federal Motor Transport Authority, or KBA, demanded a recall of 2.4 million cars in Germany after reviewing proposals Volkswagen filed last week to fix vehicles fitted with software designed to cheat on pollution tests, German Transport Minister Alexander Dobrindt said Thursday in Berlin. The mandatory recall is the basis for callbacks throughout Europe, where diesel accounts for more than half the market.

Germany's rare public snub of its biggest carmaker came after Volkswagen circumvented diesel emissions regulations starting in 2008. The country's demands will speed a process that Volkswagen said will last beyond 2016, and give authorities more control.

"It's an unusual measure to be ordering a mandatory recall," said Arndt Ellinghorst, a London-based analyst with Evercore ISI. "It shows to me that the KBA is losing patience with VW's slow response on what to do to fix the engines so far. Customers have been left unsettled."

Biggest Recall

The 8.5 million affected cars represent slightly less than one-third of Volkswagen's auto deliveries in the region from 2009 through August, based on sales figures the company published for the five divisions involved. The recall is also Germany's biggest since its current rules took effect in 1997, more than the record 1.9 million cars the entire auto industry brought back in under repair programs last year, according to data from the Center for Automotive Management in Bergisch Gladbach, Germany.

The mandatory recall will be more expensive for Volkswagen because the company will need to work on the cars more quickly, Evercore's Ellinghorst said. The manufacturer has yet to specify exactly how it will fix the cars, though it has said some will require only a software update while others will need new or rebuilt engine parts.

"The KBA's decision opens up the possibility of a common and coordinated response in all European Union states," Volkswagen Chief Executive Officer Matthias Mueller wrote Dobrindt on Thursday in a letter obtained by Bloomberg. "Such a unified procedure would be in the European spirit as well as in the interests of customers."

Mid-November

Volkswagen must share technical details of its fix with authorities by mid-November, and the recall will begin in January. The KBA will test vehicles to ensure the repairs were successful, Dobrindt said. New parts necessary to fix some vehicles will probably be ready by next September, he said. Throughout Europe, Dobrindt has estimated that Volkswagen will probably need to exchange or rebuild parts for about 3.6 million engines.

For the sake of customers and the image of the automobile, "we will clear up what happened at Volkswagen," Enak Ferlemann, state secretary in Germany's Transport Ministry, said in a speech in the lower house of parliament. "Germany will stay the No. 1 auto country."

U.S. Remedies

Regulators in the U.S. haven't announced a recall yet. The U.S. Environmental Protection Agency, which has jurisdiction over compliance with emission standards, said it will have to evaluate whatever repairs Volkswagen proposes before it's made part of a recall.

"EPA will order a recall in the future, but will not do so until we are confident that VW's fix will work," said Laura Allen, an agency spokeswoman. "EPA will conduct our own testing to confirm this. Then we will order a recall."

The agency expects to receive information on Volkswagen's proposed remedy for diesel vehicles with so-called Gen 2 emissions controls this week, Allen said. There's no timeline for when EPA will order the recalls, she said.

The agency is still waiting on Volkswagen to provide information on vehicles with Gen 1 emissions controls, Allen said. According to VW, there are approximately 325,000 of those models -- about two-thirds of the U.S. cars under investigation.

Leipzig Meeting

As Volkswagen grapples internally with the crisis, about 400 of its top executives met in Leipzig on Thursday. Another of the company's top engineers, Falko Rudolph, chief of a parts factory near Kassel, was suspended as part of the investigation, a person familiar with the situation said, asking not to be named because the suspension is private. Rudolph couldn't be reached for comment.

The carmaker admitted in September to designing software so that 482,000 of its diesel cars in the U.S. would turn on full pollution controls only when undergoing laboratory emissions testing, not on the road. Since then the deception has been shown to be far broader, affecting about 11 million cars worldwide. The software was also active in diesels VW sold with the same EA189 engine in Germany, Dobrindt said Thursday.

"The KBA is under pressure to show to the public they're on top of this and that they're in the driver's seat," said Stefan Bratzel, head of auto research at the University of Applied Sciences. "Recalls to fix key safety issues that go to the core of a vehicle's operation almost always occur voluntarily, with the KBA monitoring. So making this fix -- while the cars are running safely -- a mandatory one shows the political pressure."

The shares fell 3.6 percent to 102.80 euros in Frankfurt. The diesel crisis has wiped 21.5 billion euros ($24.5 billion) off Volkswagen's market value.

VW faces a "large need for change," Mueller told his top executives in Leipzig, according to a transcript of his speech. "I don't think much of revolution. And the Volkswagen group doesn't need one. What we need is courage to act consequently, the will to change."

Martin, here are the final versions of the subject memos which are ready to be sent to the Administrator's Office.

I also am copying OAR and OECA so that they have the final versions.

Many thanks…
Anna

MEETING WITH EUROPEAN COMMISSION VICE PRESIDENT FOR ENERGY UNION MAROŠ ŠEFČOVIČ

DATE: October 23, 2015
LOCATION: Alm Conference Room
TIME: 11:00 – 11:30 a.m.
FROM: Anna Phillips, OITA

I. PURPOSE

Vice President Šefčovič *[SHEF-cho-veech]* requested this meeting to reaffirm the importance of cooperation with the U.S. on energy and climate issues. He is particularly interested in discussing EU and U.S. efforts to address the Volkswagen case, but he also may raise preparations for UNFCCC COP 21 in Paris and the Montreal Protocol.

Vice President Šefčovič was recently appointed to oversee the EU's efforts to respond to the Volkswagen case. According to the U.S. Mission to the EU, this decision was due to his stature and proven track record as a highly effective diplomat as he personally negotiated the gas deal between Russia and Ukraine and he was responsible for developing and selling the EU's Energy Union Strategy to 28 EU Member States. A brief biography is attached.

Current EU emissions testing regimes are much less rigorous than those in the United States. In addition, the European Commission does not have direct testing or enforcement authority and must rely on individual Member States to take those actions. Therefore, it is still unclear what steps the European Commission will be able to take in response to this case. Recent news coverage provides additional context and selected articles are attached for reference.

While in Washington, Vice President Šefčovič will meet with Energy Secretary Ernest Moniz, the White House, Department of State, U.S. Senate, World Bank, IMF and will speak at the Johns Hopkins University School of Advanced International Studies. The original purpose of his visit to Washington was to co-chair the U.S. - EU Energy Council with Secretary of State John Kerry but the meeting was cancelled at the last minute due to Secretary Kerry's recent decision to travel to the Middle East.

Vice President Šefčovič assumed his responsibilities as part of the new European Commission which took office in November 2014 for a five-year term. At the initiative of incoming European Commission President Jean Claude Juncker, a new matrix management structure was created which established six Vice Presidents responsible for cross-cutting issues who coordinate and oversee the work of other Commissioners with related and sometimes overlapping portfolios.

Vice President Šefčovič's mandate includes responsibility for establishing a European Energy Union (infrastructure connectivity, enforcement and competition); preventing energy shortages, diversifying energy sources and improving energy security; improving energy efficiency, especially for buildings (with a binding target of 30% less energy use by 2030); and ensuring that the EU reaches its climate and energy targets for 2020 and 2030.

This is your first meeting with Vice President Šefčovič. You recently met with EU Commissioner for Environment, Maritime Affairs and Fisheries Karmenu Vella in September.

II. PARTICIPANTS

Attendees
- Vice President Šefčovič
- Caroline Vicini, Deputy Chief of Mission, EU Delegation (Embassy) to the United States
- Juraj Nociar, Head of Cabinet of Vice President Šefčovič
- Bernd Biervert, Deputy Head of Cabinet of Vice President Šefčovič
- Jeffery Piper, International Relations Officer, Directorate-General for Energy
- Fabrice Vareille, Minister Counselor for Environment, Energy and Transport, EU Delegation
- Michael Koplovsky, Minister Counselor, Economic Affairs, U.S. Mission to the EU, Brussels

Staff
- YOU
- Jane Nishida, OITA
- Chris Grundler, OAR/OTAQ
- Cynthia Giles, OECA
- Evan Belser, OECA
- William Niebling, OAR
- Benjamin Hengst, OAR

VW FOIA, EPA 06/20/2017 2017-FFP_034901

TALKING POINTS:

- Vice President Šefčovič *[SHEF-cho-veech]*, it is a pleasure to welcome you to EPA. I always appreciate the opportunity to exchange experiences with European partners so that we can learn from each other and meet our common challenges.

- I recently had the pleasure of meeting with Commissioner Vella who I understand is a member of your team at the European Commission.

- **Volkswagen's violations are egregious and serious.**

  - On September 18, EPA sent a Notice of Violation of the Clean Air Act to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. alleging that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards. These cars contain software that turns off emissions controls when driving normally, and turns them on when the car is undergoing an emission test.

  - Known as a "defeat device," this design feature results in the cars emitting up to 40 times the amount of NOx emissions that are allowed to ensure public health is protected.

  - The Volkswagen violations are very serious. Not only because the illegal defeat device results in excess NOx pollution at levels up to 40 times the allowable standard, but also because VW was concealing the facts from EPA, the State of California, and from consumers.

  - Using a defeat device in cars to evade clean air standards is illegal and a threat to public health.

- **EPA and CARB together are taking action.**

  - Working closely with the California Air Resources Board, EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters.

- **EPA's oversight testing is robust and has been successful.**

  - We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations. It is this oversight that ensures both the benefits of clean air emissions standards; that industry is competing on a level playing field; and that consumers are getting what they pay for.

  - Our regulatory programs for cars and trucks are working. We know this because air quality monitors tell a clear and compelling story: U.S. air quality has dramatically improved as a result of implementing our program, even as vehicle miles and the economy have grown significantly.

  - EPA and California's motor vehicle programs have been very successful at delivering on our agencies' missions to protect human health and the environment.

Background: EPA issued a notice of violation (NOV) of the Clean Air Act (CAA) to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. on September 18, 2015. The NOV alleges that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards for certain air pollutants. The software produced by Volkswagen is a "defeat device," as defined by the Clean Air Act. California also issued its own In-Use Compliance letter to Volkswagen on September 18.EPA and the California Air Resources Board have both initiated investigations based on Volkswagen's alleged actions.

U.S. and European vehicle emission control programs differ in several important ways.

Structurally, EPA has comprehensive responsibility and authority to set vehicle emission standards, certify that vehicles meet those standards before they can be sold, monitor compliance of production vehicles throughout their useful life, and enforce compliance with the standards. Europe also requires manufacturers to secure up-front approval that vehicles meet emission standards. However, unlike EPA's certification process, the EU allows manufacturers to obtain that approval from commercial test labs. The labs must be certified by a member state but manufacturers may choose any certified lab in any member state for the testing. Europe's in-use oversight is also different. The only in-use compliance requirement is that manufacturers randomly test a small sample of their own vehicles and report the results to authorities. Each member state has its own enforcement authority and protocols.

U.S. and European emission standards and test procedures also differ in several ways including stringency. The U.S. NOx standard to which the VW defeat device vehicles were certified was significantly more stringent than the European NOx standard. In addition, the U.S. required much more rigorous test procedures than the EU did to measure compliance with those standards.

EPA adopted a 5-cycle test requirement as part of its Tier 2 emission standards, which phased in starting in MY 2004. The additional cycles were developed to address high-emission conditions such as high-speed, aggressive driving, low temperatures, and heat load/air conditioning use that had not been captured by the previous city and highway driving cycles. Europe also has recognized and is moving to address the gap between emissions measured over its lab testing cycles and real-world road driving. Europe plans to implement new test cycles that capture certain additional operational modes starting with 2017 models. Of course, it is still possible to deliberately defeat known test cycles, which is why we have now incorporated unpredictable procedures to detect defeat devices during certification and as part of our in-use monitoring program.

UNFCCC COP 21 (if raised):

- EPA continues to foster our relationships with other countries to address global climate change both bilaterally and by participation in UNFCCC international negotiations for which the State Department has the lead for the U.S. Government.

- The United States is fully engaged in the effort to deliver a strong agreement in Paris.

- On March 31, the U.S. announced a target to reduce climate pollution 26-28% below 2005 levels in 2025. This target is both ambitious and achievable. It is consistent with achieving deep, economy-

wide reductions of over 80 percent by 2050. It roughly doubles the pace of emission reductions for the period 2020-2025 as compared to 2005-2020.

- We also have intensified focus on bolstering our domestic resilience to climate change.

Montreal Protocol (if raised):

- The United States, Canada, and Mexico have modified our HFC amendment approach for a two-step process to phase down HFCs:
  - adopt a more limited HFC amendment at the 2015 MOP, and
  - agree to negotiate the rest of the phasedown and other aspects in 2016.

- This approach is our best chance to adopt an amendment this year. We remain committed to the overall ambition of our proposed amendment, and we will revisit the rest in 2016.

- Our overall objectives on HFCs are very similar, and we want to work together.

- **There are two key aspects that may still divide us:**

  - **First, you use a basket approach including both HCFCs and HFCs together, whereas we phase down HFCs alone. I'd urge you to consider whether our simpler approach of addressing HFCs will work for you, as the basket approach you suggest is not a typical Montreal approach and introduces a lot of complexity.**

  - **Second, you are still pushing for a full non-Article 5 (developed) phasedown even if Article 5 (developing) countries only commit to a freeze. We propose limiting our reductions to the first two of the four steps for non-Article 5 because:**

    1. **It gives us something to offer for the negotiations in 2016;**
    2. **Some of our developed country partners have reservations about the last two steps so we will have to push them very hard to get there; and**
    3. **It introduces excessive differentiation just before COP 21 where we are trying to avoid differentiation.**

VW FOIA, EPA 06/20/2017 2017-FFP_034904

- **We also urge your Member States to send a strong signal that they are prepared to provide the financial support necessary for Article 5 to meet HFC obligations. The June G-7 statement on finance for an amendment should be helpful in this regard.**

VW FOIA, EPA 06/20/2017 2017-FFP_034905

EUROPEAN COMMISSION VICE PRESIDENT FOR ENERGY UNION MAROŠ ŠEFČOVIČ

Slovak nationality. Married with three children.

- Commission Vice-President for Energy Union (2014 – present)
- European Commissioner and Vice-President for Inter-Institutional Relations (2010-2014)
- European Commissioner for Education, Training, Culture and Youth (2009-2010)
- Slovak Permanent Representative to the EU (2004-2009)
- Director-General of European Affairs Section, Slovak Ministry of Foreign Affairs (2003)
- Director-General of Bilateral Cooperation Section, Slovak Ministry of Foreign Affairs (2002)
- Ph.D. in international and European law, Comenius University in Bratislava (2000)
- Ambassador, Slovak Embassy, Israel (1999)
- Deputy Head of Mission, Slovak Mission to the EU in Brussels (1998)
- Director, Slovak Foreign Minister's Office (1998)
- Deputy Director, Slovak Foreign Minister's Office (1997)
- Deputy Director for the EU and NATO countries, Slovak Ministry of Foreign Affairs (1996)
- Deputy Chief of Mission, Czech and Slovak Embassy, Canada (1992)
- Doctor of Law (JUDr.), Comenius University in Bratislava (1990)

VW Scandal Exposes Cozy Ties in Europe's New Car Tests

By DANNY HAKIM and GRAHAM BOWLEY

OCT. 14, 2015

LONDON — Three diesel cars were taken out for a trial run last year by a German engineering and testing company. Employees at the company, TÜV Nord, drove the cars in Stuttgart and in Munich, and in suburbs, on country roads and on highways.

What they found was that all of the cars — a Volkswagen, a BMW and a Mazda — gave off far more pollutants than they did in lab tests, in some cases, more than six times the limit under new European regulations. For TÜV Nord, the research was just another confirmation of the shortcomings of the existing European lab tests.

The Hanover-based TÜV Nord knows as much as any company about how diesels perform on the road and in the lab. Widely regarded for its engineering expertise, the company has been a major force in developing a more accurate testing process for Europe's cars, which is expected to be introduced in the next year or so.

But the scandal at Volkswagen has exposed the deep conflicts in the chummy world of European emissions testing, where car manufacturers hire outside firms to certify their pollution controls in laboratories. Not only is TÜV Nord at the forefront of finding a new testing regimen for automakers, but it is also the company that signed off on VW's emissions tests in Europe.

Many of Volkswagen's vehicles, the automaker admitted last month, included software programmed to cheat on laboratory emissions tests. Given TÜV Nord's testing expertise, the situation raises questions about what, if anything, it knew about VW's tactics. And it highlights the weaknesses in a system that relies on contractors paid by carmakers to carry out the tests.

Since Volkswagen admitted the deception, TÜV Nord has been largely silent. A spokeswoman declined to comment on the specifics of the Volkswagen case, including whether the vehicles it tested were programmed to thwart laboratory tests, or if it had raised concerns about the vehicles' performance on the tests.

In an email, the spokeswoman said little beyond confirming that "TÜV Nord performs emission measurements within the framework of the approval process for models of different vehicle manufacturers (among others for VW)."

Who conducts emissions tests and how they are done remains a central question on both sides of the Atlantic after the Volkswagen scandal. While regulators in the United States allow automakers to do their own testing, the American system is seen as more robust than Europe, because the Environmental Protection Agency conducts random tests of its own.

Although Volkswagen's deception was particularly egregious, testing firms in Europe are generally seen as assisting automakers employ what are legal strategies to help their vehicles reduce their pollution in a lab in ways they never could on the road. Among other problems with the process, automakers in Europe can run their tests on preproduction cars that may not perform like the cars that ultimately come off the assembly line.

"Testing companies assist with the distortion of laboratory test results to produce artificially low results," said Greg Archer, the clean vehicles program manager at Transport & Environment, an advocacy group. "We have testing organizations that are working for the carmakers, exploiting all the loopholes that they can in an obsolete testing procedure."

TÜV Nord, which is privately held, has its roots as one of a number of trade associations set up to inspect steam boilers in 19th-century Germany. Now it has more than 10,000 employees around the world and inspects everything from satellite components to computer networks, and operates a food testing laboratory in Pune, India.

While one of TÜV Nord's promotional videos notes its "objective outside viewpoint," the company has a close relationship with Volkswagen, which goes beyond emissions testing.

TÜV Nord has also worked for Volkswagen in the United States; its engineers spent a week auditing environmental compliance at the carmaker's plant in Chattanooga, Tenn., before production started in 2011. One of the members of TÜV Nord's supervisory board, Stephan Schaller, has also been an executive at both Volkswagen and BMW during his tenure on the TÜV board.

This spring, TÜV Nord's chairman, Guido Rettig, posed for a photograph next to Martin Winterkorn, then the chief executive of Volkswagen. Both men smiled as Mr. Rettig awarded Mr. Winterkorn and Volkswagen with an oversized certificate for overall quality excellence "throughout its entire organization," according to a news release.

"It testifies to the outstanding work of everyone at VW," Mr. Winterkorn said at the time.

Following the Volkswagen scandal, automakers have publicly embraced the on-road tests that TÜV Nord and other groups are helping develop in Europe, though they are also lobbying behind the scenes to make them much easier to pass.

None dispute that their cars emit more on the road than they do in the precise conditions of lab tests, as studies have shown. Volkswagen did not respond to requests for comment, but the two other companies involved in the TÜV Nord test last year acknowledged such differences.

"The driver may brake and accelerate more frequently, and ascend steeper slopes than is done during testing," said Graeme Fudge, a Mazda spokesman. "All of these factors will increase engine emissions."

VW FOIA, EPA 06/20/2017 2017-FFP_034908

Michael Rebstock, a spokesman for BMW, said the company supported "rapid introduction of the new regulations to create clarity for consumers and the industry as quickly as possible."

Concerns about diesel pollution have long festered in Europe, where diesels are more popular than anywhere else, and regulators have spent several years trying to develop tests outside laboratories. The United States has required such tests on large diesel trucks since a similar cheating scandal in 1998, but Europe's will be the first required for cars by regulators anywhere.

With its extensive research, TÜV Nord, which has been developing portable testing equipment for trucks for more than a decade, was a natural partner on the project. The company has been a regular presence at a technical working group advising policy makers in Brussels, the seat of the European Commission.

Even environmental advocacy groups have sought TÜV's help. Transport & Environment has taken part in discussions about the new European tests and has used TÜV Nord for one of its own studies.

The International Council on Clean Transportation, which oversaw the independent tests of diesel emissions that led to the Volkswagen scandal, is currently collaborating on a study with TÜV Nord of emissions from diesel-electric hybrid vehicles.

Vicente Franco, a researcher at I.C.C.T. who has taken part in meetings in Brussels with officials from TÜV Nord, said the company "made meaningful contributions that were meant to make the on-road tests more robust."

Still, Mr. Franco conceded that the interconnectedness underscores the vulnerabilities of the system. "There is a financial dependency between the technical services and manufacturers that at some point should be rethought to improve the confidence in the system, but this is a long-term process, and it takes a lot of political will," he said.

Many policy makers have faulted the passive role played by regulators and believe there is a need for far more independent tests. Regulation in Europe is handled by each of the 28 member states, and there is little enforcement.

"We are definitely against having self-regulatory tests, because obviously they are not working," said Miriam Dalli, a Social Democrat from Malta who sits on the European Parliament's environmental committee. "We need an independent testing system."

Giovanni La Via, the chairman of the Parliament's environmental committee, says there needs to be a new European agency to oversee car testing in the 28 member states.

"European institutions react after a scandal," said Mr. La Via, a member of the center-right European People's Party, the largest bloc in the Parliament. "We need to use the same procedure for all the car producers. We cannot maintain 28 different systems."

Danny Hakim reported from London, and Graham Bowley from Wolfsburg, Germany.

Dieselgate: More EU countries join call for stricter emission tests

EurActiv (Oct 20) - Several EU member states including major automaker France will urge Europe's pollution regulator to thoroughly assess the consequences of the Volkswagen emissions scandal, according to a document seen by AFP Monday (19 October). "The environmental dimension needs to be clearly assessed and highlighted," said the letter, which was addressed to the EU's 28 environment ministers ahead of talks on October 26 in Luxembourg.

"The case could have a direct bearing on the total emissions of a country, and might have an impact on efforts by all member states to fulfill their (emission) obligations ... and meet air quality standards in the EU," the letter said.

The letter, dated Monday, was written by Austria and Denmark and officially backed by France, the Netherlands, Slovenia and Luxembourg. It did not involve Germany, the home of auto giant Volkswagen that is under fire for massive cheating on emission tests.

The actual target of the letter is the European Commission, the EU's regulatory arm that sets emission rules across the 28-country bloc, but without any power of oversight, which remains with national authorities.

The Commission must "give a concise overview of the actions and measures being taken to clarify the magnitude of the manipulation of diesel cars," the letter said.

The six countries also urged the swift introduction of real-driving tests that are widely known to stamp out the sophisticated cheating carried out by Volkswagen in laboratory tests.

At issue is the date when the real driving tests should be enforced and what delay should be allowed before emissions limits are policed fully. The introduction of these tests "needs to be taken forward more quickly," the letter said. Officially, the real-life tests will begin in January, but only for reference.

The executive's proposal, which remains unofficial, allows car companies until 2019 to fully implement the new standard, a delay seen as unjustified by activists. In its own letter to ministers, Belgium said full implementation should take place no later than 2017.

But the pressure on European governments to not overly upset the auto industry is huge, especially as the economic fallout of the VW scandal remains unknown. According to industry data, the auto sector is responsible for about 12 million jobs across the EU, where economic growth remains sluggish and joblessness is still a concern.

VW FOIA, EPA 06/20/2017 2017-FFP_034910

EU countries warn of Volkswagen scandal fallout

AFP (Oct 19) - Several EU member states including major automaker France will urge Europe's pollution regulator to thoroughly assess the consequences of the Volkswagen emission scandal, according to a document seen by AFP Monday.

"The environmental dimension needs to be clearly assessed and highlighted," said the letter, which was addressed to the EU's 28 environment ministers ahead of talks on October 26 in Luxembourg.

"The case could have a direct bearing on the total emissions of a country, and might have an impact on efforts by all member states to fulfil their (emission) obligations ... and meet air quality standards in the EU," the letter said.

The letter, dated Monday, was written by Austria and Denmark and officially backed by France, the Netherlands, Slovenia and Luxembourg. It did not involve Germany, the home of auto giant Volkswagen that is under fire for massive cheating on emission tests.

The actual target of the letter is the European Commission, the EU's regulatory arm that sets emission rules across the 28-country bloc, but without any power of oversight, which remains with national authorities.

The Commission must "give a concise overview of the actions and measures being taken to clarify the magnitude of the manipulation of diesel cars," the letter said.

The seven countries also urged the swift introduction of real-driving tests that are widely known to stamp out the sophisticated cheating carried out by Volkswagen in laboratory tests.

At issue is the date when the real driving tests should be enforced and what delay should be allowed before emission limits are policed fully.

The introduction of these tests "needs to be taken forward more quickly," the letter said.

Officially, the real-life tests will begin in January, but only for reference.

The Commission proposal, which remains unofficial, allows car companies until 2019 to fully implement the new standard, a delay seen as unjustified by activists.

In its own letter to ministers, Belgium said full implementation should take place no later than 2017.

But the pressure on European governments to not overly upset the auto industry is huge, especially as the economic fallout of the VW scandal remains unknown.

According to industry data, the auto sector is responsible for about 12 million jobs across the EU, where economic growth remains sluggish and joblessness is still a concern.

MEETING WITH GERMAN MINISTER OF TRANSPORT AND DIGITAL INFRASTRUCTURE ALEXANDER DOBRINDT

DATE: October 27, 2015
LOCATION: Alm Conference Room
TIME: 11:00 a.m. – 12:00 p.m.
FROM: Anna Phillips, OITA

I. PURPOSE

Minister Dobrindt requested this meeting to discuss the Volkswagen case. He would like to inform EPA about the actions that the German government has taken and will take in response. He also is interested to learn about emission standards and testing in the United States, EPA's plans to further improve the testing process in the future, and learning more about the U.S. enforcement process. Current EU emissions testing regimes are much less rigorous than those in the United States.

Minister Dobrindt has been designated to lead the German government's response to the Volkswagen case. The German Federal Motor Transport Authority, or KBA, recently demanded the recall of 2.4 million cars in Germany after rejecting Volkswagen's proposals to fix vehicles fitted with the software designed to cheat on emissions tests. This mandatory recall is expected to lead to callbacks throughout Europe, where diesel cars comprise more than half of the market. Recent news coverage provides additional context and selected articles are attached for reference.

Minister Dobrindt has been in his position since December 2013. A member of the German Bundestag (Parliament), he has experience and remains active at all levels of government. A brief biography is attached.

This is your first meeting with Minister Dobrindt. The discussion will build on a productive conference call between OTAQ and German Ministry senior staff on this issue in late September.

II. PARTICIPANTS

Attendees

- Minister Dobrindt
- Hans Peter Wittig, German Ambassador to the United States
- Ekhard Zinke, President, Federal Motor Transport Authority (KBA)
- Gerold Reichle, Director-General, Department of Aviation
- Sebastian Rudolph, Director-General, Department of Communication
- Tobias Miethaner, Director-General, Department of Digital Society

- Petra Bethge, Director of International Relations and Foreign Trade
- Benedikt Kuhn, Director of Communications
- Immanuel Wolf, Office of International Relations and Foreign Trade
- Nicole Schreiter, Personal Assistant to Minister Dobrindt
- Stephan Zass, Counselor for Transportation and Digital Infrastructure, German Embassy
- Michael Weber, Energy Policy Advisor, German Embassy
- Konstantina Makridou, Interpreter

Staff
- YOU
- Jane Nishida, OITA
- Chris Grundler, OAR
- Cynthia Giles, OECA
- Evan Belser, OECA
- William Niebling, OAR
- Benjamin Hengst, OAR
- Mark Kasman, OITA
- Anna Phillips, OITA

III. AGENDA

This will be an informal discussion with no set agenda.

- YOU will start the meeting by welcoming the participants and offering very brief introductory comments.
- Minister Dobrindt will provide a brief overview of relevant issues from the EU perspective followed by a general discussion.

IV. PRESS: This is a closed meeting with no press attendance.

V. TALKING POINTS: Talking points are attached, with key messages in bold.

VW FOIA, EPA 06/20/2017 2017-FFP_034913

TALKING POINTS:

- Minister Dobrindt, Mr. Ambassador, it is a pleasure to welcome you to EPA. I always appreciate the opportunity to exchange experiences with European partners so that we can learn from each other and meet our common challenges.

- I was pleased to learn that our staffs have already been in touch to exchange initial information regarding the Volkswagen case and we hope that they found the conversation useful.

- **Volkswagen's violations are egregious and serious.**

  - On September 18, EPA sent a Notice of Violation of the Clean Air Act to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. alleging that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards. These cars contain software that turns off emissions controls when driving normally, and turns them on when the car is undergoing an emission test.

  - Known as a "defeat device," this design feature results in the cars emitting up to 40 times the amount of NOx emissions that are allowed to ensure public health is protected.

  - The Volkswagen violations are very serious. Not only because the illegal defeat device results in excess NOx pollution at levels up to 40 times the allowable standard, but also because VW was concealing the facts from EPA, the State of California, and from consumers.

  - Using a defeat device in cars to evade clean air standards is illegal and a threat to public health.

- **EPA and CARB together are taking action.**

  - Working closely with the California Air Resources Board (CARB), EPA is committed to making sure that all automakers play by the same rules. EPA will continue to investigate these very serious matters.

- **EPA's oversight testing is robust and has been successful.**

  - We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations. It is this oversight that ensures both the benefits of clean air emissions standards; that industry is competing on a level playing field; and that consumers are getting what they pay for.

  - Our regulatory programs for cars and trucks are working. We know this because air quality monitors tell a clear and compelling story: U.S. air quality has dramatically improved as a result of implementing our program, even as vehicle miles and the economy have grown significantly.

  - EPA and California's motor vehicle programs have been very successful at delivering on our agencies' missions to protect human health and the environment.

Background: EPA issued a notice of violation (NOV) of the Clean Air Act (CAA) to Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc. on September 18, 2015. The NOV alleges that four-cylinder Volkswagen and Audi diesel cars from model years 2009-2015 include software that circumvents EPA emissions standards for certain air pollutants. The software produced by Volkswagen is a "defeat device," as defined by the Clean Air Act. California also issued its own In-Use Compliance letter to Volkswagen on September 18.EPA and the California Air Resources Board have both initiated investigations based on Volkswagen's alleged actions.

U.S. and European vehicle emission control programs differ in several important ways.

Structurally, EPA has comprehensive responsibility and authority to set vehicle emission standards, certify that vehicles meet those standards before they can be sold, monitor compliance of production vehicles throughout their useful life, and enforce compliance with the standards. Europe also requires manufacturers to secure up-front approval that vehicles meet emission standards. However, unlike EPA's certification process, the EU allows manufacturers to obtain that approval from commercial test labs. The labs must be certified by a member state but manufacturers may choose any certified lab in any member state for the testing. Europe's in-use oversight is also different. The only in-use compliance requirement is that manufacturers randomly test a small sample of their own vehicles and report the results to authorities. Each member state has its own enforcement authority and protocols.

U.S. and European emission standards and test procedures also differ in several ways including stringency. The U.S. NOx standard to which the VW defeat device vehicles were certified was significantly more stringent than the European NOx standard. In addition, the U.S. required much more rigorous test procedures than the EU did to measure compliance with those standards.

EPA adopted a 5-cycle test requirement as part of its Tier 2 emission standards, which phased in starting in MY 2004. The additional cycles were developed to address high-emission conditions such as high-speed, aggressive driving, low temperatures, and heat load/air conditioning use that had not been captured by the previous city and highway driving cycles. Europe also has recognized and is moving to address the gap between emissions measured over its lab testing cycles and real-world road driving. Europe plans to implement new test cycles that capture certain additional operational modes starting with 2017 models. Of course, it is still possible to deliberately defeat known test cycles, which is why we have now incorporated unpredictable procedures to detect defeat devices during certification and as part of our in-use monitoring program.

PETER WITTIG

GERMAN AMBASSADOR TO THE UNITED STATES

Peter Wittig has served as German Ambassador to the United States since April 2014.

Prior to this, he was German Ambassador to the United Nations in New York and represented Germany during its tenure as a member of the UN Security Council from 2011 until 2012. There, he drew on his wide expertise in United Nations matters, having previously served as Director-General for United Nations and Global Issues at the German Foreign Office in Berlin and having been posted to the German Permanent Mission in New York in the late 1980s.

Wittig joined the German Foreign Service in 1982. He has also served in Madrid, at the headquarters as the private secretary to the Foreign Minister, and as Ambassador both in Lebanon and then in Cyprus. He was the German Government Special Envoy on the "Cyprus question" (the division of Cyprus). He has acquired extensive knowledge of the Middle East.

Before starting his career in the German Foreign Service, Wittig studied history, political science, and law at Bonn, Freiburg, Canterbury, and Oxford universities and taught as an assistant professor at the University of Freiburg. His wife, Huberta von Voss-Wittig, has worked as both a journalist and a writer. The couple has four children: Valeska, Maximilian, Augustin, and Felice.

Germany says Volkswagen could have broken EU law

Brussels, 19/10/2015 (Agence Europe) - According to a decision made by the Federal Motor Transport Authority (Kraftfahrt-Bundesamt - KBA) on Thursday 15 October, as reported in the German newspaper, Bild Zeitung, Volkswagen has systematically used cheat devices, which would have clearly broken European law.

The German newspaper's article is based on a letter from the German Transport Minister, Alexander Dobrindt, who quotes Article (5, 2) of EC Regulation 715/2007 "on type approval of motor vehicles with respect to emissions from light passenger and commercial vehicles (Euro 5 and Euro 6) and on access to vehicle repair and maintenance information". The article in question focuses on the requirements and tests carried out during the trials and categorically prohibits cheat devices, "which reduce the effectiveness of emissions control systems".

The article includes, however, three exceptions to this ban, when: the device is justified in terms of engine protection against damages or accidents and to ensure vehicles function in perfect safety; that they are only activated when the engine starts; or when "the conditions are substantially included in trial procedures for verifying evaporation related emissions and average emissions from the rear exhaust pipe". In the same regulation, another article (3.10) is quite clear about cheat devices, namely, "in all conceptualisation elements used for temperature detection, vehicle speed, engine speed in revolutions / minute, transmission, vacuum or any other parameter for the purpose of activating, modulating, delaying or deactivating the operation of any part of the emission control system, which reduces the effectiveness of emission control system under conditions which may reasonably be expected to be in operation and normal vehicle use".

According to some observers, this decision provides a possibility for member states to pursue the German manufacturer in the courts. Article 13 of the same regulation highlights the obligation incumbent on member states to sanction manufacturers that have breached the above-mentioned requirements and to do so in a way that is efficient, proportionate and dissuasive.

There are five kinds of infringements: false declarations during registration or recall procedures; the falsification of registration test results or those pertaining to service compliance; concealing data or technical specifications that could lead to a recall or withdrawal from registration; the use of cheat devices and, finally, a refusal to grant access to information. BLOOMBERG BUSINESS

VW Will Recall 8.5 Million Rigged Diesels After German Hard Line

Volkswagen recall in Europe will last beyond the end of 2016

German authorities rejected VW's offer of voluntary repairs

Updated on October 15, 2015 — 4:09 PM EDT

Volkswagen AG will embark on one of the biggest recalls in European automotive history, affecting 8.5 million diesel vehicles, after German authorities threw out the carmaker's proposal for voluntary repairs.

The Federal Motor Transport Authority, or KBA, demanded a recall of 2.4 million cars in Germany after reviewing proposals Volkswagen filed last week to fix vehicles fitted with software designed to cheat on pollution tests, German Transport Minister Alexander Dobrindt said Thursday in Berlin. The mandatory recall is the basis for callbacks throughout Europe, where diesel accounts for more than half the market.

Germany's rare public snub of its biggest carmaker came after Volkswagen circumvented diesel emissions regulations starting in 2008. The country's demands will speed a process that Volkswagen said will last beyond 2016, and give authorities more control.

"It's an unusual measure to be ordering a mandatory recall," said Arndt Ellinghorst, a London-based analyst with Evercore ISI. "It shows to me that the KBA is losing patience with VW's slow response on what to do to fix the engines so far. Customers have been left unsettled."

Biggest Recall

The 8.5 million affected cars represent slightly less than one-third of Volkswagen's auto deliveries in the region from 2009 through August, based on sales figures the company published for the five divisions involved. The recall is also Germany's biggest since its current rules took effect in 1997, more than the record 1.9 million cars the entire auto industry brought back in under repair programs last year, according to data from the Center for Automotive Management in Bergisch Gladbach, Germany.

The mandatory recall will be more expensive for Volkswagen because the company will need to work on the cars more quickly, Evercore's Ellinghorst said. The manufacturer has yet to specify exactly how it will fix the cars, though it has said some will require only a software update while others will need new or rebuilt engine parts.

"The KBA's decision opens up the possibility of a common and coordinated response in all European Union states," Volkswagen Chief Executive Officer Matthias Mueller wrote Dobrindt on Thursday in a letter obtained by Bloomberg. "Such a unified procedure would be in the European spirit as well as in the interests of customers."

VW FOIA, EPA 06/20/2017 2017-FFP_034919

Mid-November

Volkswagen must share technical details of its fix with authorities by mid-November, and the recall will begin in January. The KBA will test vehicles to ensure the repairs were successful, Dobrindt said. New parts necessary to fix some vehicles will probably be ready by next September, he said. Throughout Europe, Dobrindt has estimated that Volkswagen will probably need to exchange or rebuild parts for about 3.6 million engines.

For the sake of customers and the image of the automobile, "we will clear up what happened at Volkswagen," Enak Ferlemann, state secretary in Germany's Transport Ministry, said in a speech in the lower house of parliament. "Germany will stay the No. 1 auto country."

U.S. Remedies

Regulators in the U.S. haven't announced a recall yet. The U.S. Environmental Protection Agency, which has jurisdiction over compliance with emission standards, said it will have to evaluate whatever repairs Volkswagen proposes before it's made part of a recall.

"EPA will order a recall in the future, but will not do so until we are confident that VW's fix will work," said Laura Allen, an agency spokeswoman. "EPA will conduct our own testing to confirm this. Then we will order a recall."

The agency expects to receive information on Volkswagen's proposed remedy for diesel vehicles with so-called Gen 2 emissions controls this week, Allen said. There's no timeline for when EPA will order the recalls, she said.

The agency is still waiting on Volkswagen to provide information on vehicles with Gen 1 emissions controls, Allen said. According to VW, there are approximately 325,000 of those models -- about two-thirds of the U.S. cars under investigation.

Leipzig Meeting

As Volkswagen grapples internally with the crisis, about 400 of its top executives met in Leipzig on Thursday. Another of the company's top engineers, Falko Rudolph, chief of a parts factory near Kassel, was suspended as part of the investigation, a person familiar with the situation said, asking not to be named because the suspension is private. Rudolph couldn't be reached for comment.

The carmaker admitted in September to designing software so that 482,000 of its diesel cars in the U.S. would turn on full pollution controls only when undergoing laboratory emissions testing, not on the road. Since then the deception has been shown to be far broader, affecting about 11 million cars worldwide. The software was also active in diesels VW sold with the same EA189 engine in Germany, Dobrindt said Thursday.

"The KBA is under pressure to show to the public they're on top of this and that they're in the driver's seat," said Stefan Bratzel, head of auto research at the University of Applied Sciences. "Recalls to fix key safety issues that go to the core of a vehicle's operation almost always occur voluntarily, with the KBA monitoring. So making this fix -- while the cars are running safely -- a mandatory one shows the political pressure."

The shares fell 3.6 percent to 102.80 euros in Frankfurt. The diesel crisis has wiped 21.5 billion euros ($24.5 billion) off Volkswagen's market value.

VW faces a "large need for change," Mueller told his top executives in Leipzig, according to a transcript of his speech. "I don't think much of revolution. And the Volkswagen group doesn't need one. What we need is courage to act consequently, the will to change."

Thanks Ex. 7

I very much appreciate you sharing this. We heard a similar summary from Janet today.

Do you know when we should expect to receive Mr. Ex. 7 written response? I am hoping that it will help all of us (EPA, CARB and VW) to constructively work to move the recall planning forward as quickly as possible.

Thanks,

Byron

First since '96: NRC approves Watts Bar 2 license

By Kevin Rogers

The Nuclear Regulatory Commission on Thursday approved its first nuclear generating license in nearly 20 years, authorizing the Tennessee Valley Authority to run the second reactor at its Watts Bar Nuclear Plant, more than four decades after ground was first broken.

Supporters said it was a "hallmark day" for the nuclear industry, but one critic called Watts Bar 2 a "zombie reactor" and said its approval was merely an "anomaly" that doesn't represent a turnaround for the nuclear sector.

The license -- the first granted by NRC since Unit 1 at Watts Bar was authorized in 1996 -- allows Unit 2, under construction since January 1973, to operate until 2055.

NRC said the unit will be the first nuclear site in the U.S. to fully comply with post-Fukushima safety requirements.

"After devoting more than 200,000 hours over eight years conducting extensive safety reviews and inspections, we're satisfied Unit 2 is safe to operate and we've issued TVA the operating license," Office of Nuclear Reactor Regulation Bill Dean said in a statement.

Construction stopped on the second unit in 1985, when TVA suspended the project to focus on completing the first reactor. It applied to renew the Unit 2 construction permit in 2000, and the NRC has been reviewing its license application since 2007.

TVA said the reactor was set to begin operating in early 2016, and would power as many as 650,000 homes. Combined, the two Watts Bar reactors will power 1.3 million homes.

"Completing Watts Bar Unit 2 was a sound business decision made for the long-term good of the Tennessee Valley," TVA CEO Bill Johnson said in a statement. "The unit is essential to diversifying TVA's power sources to assure the more than 9 million people served by TVA and its local power company partners have affordable and reliable electricity generated in an environmentally friendly manner."

Nuclear Energy Institute President Marvin Fertel said in a statement that the license proved that nuclear power can remain relevant, especially as the nation looks to reduce greenhouse gas emissions.

"This is a hallmark day for the U.S. nuclear energy industry," he said. "All told, nuclear energy facilities provide 63 percent of America's zero-carbon electricity supply -- evidence that significant greenhouse gas reductions in the electric sector can't be achieved unless our nation keeps the nuclear facilities we already have and builds more of them."

But Greenpeace Nuclear Policy Analyst Jim Riccio said the nuclear industry had little to celebrate, pointing to the reactor's estimated $4.5 billion cost and its nearly 43-year construction history.

"I don't think even the industry should be cheering too loudly for this one, because it's an example of everything that's wrong with nuclear power," Riccio said.

He also contended that TVA, as a federally owned corporation, had credit opportunities that other power companies can't hope to access.

"No other corporation could afford to have left this reactor -- we call them zombie reactors -- sitting on its books as long as TVA did," he said. "But because TVA has the unique situation where it has a $30 billion debt ceiling, that's why you see this weird anomaly of them actually finishing Watts Bar 2."

The announcement was celebrated by Sen. Lamar Alexander, R-Tenn., one of the leading proponents of nuclear power in Congress. He has said that nuclear would be a far more effective path forward for low-carbon energy than renewable sources such as wind power.

"Watts Bar Unit 2 is the country's first new reactor built in the 21st Century, and I am very pleased to see it is ready to go online," he said in a statement. "Soon, it will bring cheap, clean and reliable energy, as well as good-paying jobs, to the Tennessee Valley."

EPA to publish carbon rule Friday, open gates for legal challenges

By Kevin Rogers

The Environmental Protection Agency on Thursday announced that it would move to publish its final Clean Power Plan in Friday's Federal Register, opening the door for industry and state governments to pursue legal action against the power plant carbon rules.

The federal government will publish the two rules: One for existing plants—which relies on state-specific carbon emission-reduction targets—and one for new fossil fuel-fired plants—which includes hard emissions limits. The rules seek to cut, by 2030, sector carbon pollution to 32 percent below 2005 levels.

Publication starts a 60-day countdown for states and industry to file legal action against the regulation and for Congress to act on any review process to attempt to block the regulations.

States led by West Virginia, have threatened to sue over the rules, as has the coal company Murray Energy Corporation. They argue that the new rules infringe on state authority. Senate Majority Leader Mitch McConnell, R-Ky., has said he would consider using the Congressional Review Act in an attempt to overrule the regulations.

The agency on Friday will also publish a proposed federal implementation plan, which would be used in the absence of a state plan. That proposal will be open for comment from stakeholders until January 21, 2016.

On a call with reporters, Acting Assistant Administrator for Air and Radiation Janet McCabe said the more than two-month gap between finalization and publication wasn't intended to forestall legal challenges, as some opponents have alleged.

"This has actually moved fairly rapidly considering the length of these rules and the fact that there were three packages," she said.

She also said there were no "substantive" changes made between the pre-publication version and the rules that will be published.

The American Coalition for Clean Coal Electricity, an industry group opposed to the regulations, said the publication would "finally" allow states and industries to take legal action against the agency.

"We are hopeful they will be successful and that the courts act quickly and decisively to quash this illegal rule," President and CEO Mike Duncan said in a statement.

VW says newer engine may also have had trick software

By The Associated Press

BERLIN (AP) — German automaker Volkswagen said Thursday that the U.S. cars identified as having been fitted with software to cheat on emissions tests include some vehicles with a newer diesel engine.

The company said after the emissions-rigging scandal became public last month that the software was installed on cars with variants of the EA 189 diesel engine built to the "Euro 5" emissions standard.

The company is now looking at cars with the EA 288 diesel engine and that same emissions standard, Volkswagen spokesman Pietro Zollino said. Vehicles with that engine built to the newer "Euro 6" standard are not affected, he added.

He said 70,000 cars in the U.S. with the early version of the EA 288 engine — including certain Golf models, the Beetle, Jetta, Passat and Audi A3, all from 2015 — are among the 482,000 vehicles which have been identified in the U.S. as containing the suspect software.

Flooring company pleads guilty to environmental crimes

By The Associated Press

NORFOLK, Va. (AP) — Lumber Liquidators has pleaded guilty to environmental crimes related to its importation of illegally sourced wood products.

The Toano, Virginia-based company pleaded guilty Thursday to four misdemeanors and one felony and agreed to pay $13.2 million to end a federal investigation. Sentencing was set for Feb. 1 in U.S. District Court in Norfolk.

According to prosecutors, much of the illegally imported hardwood flooring was manufactured in China from timber illegally logged in eastern Russia, the habitat for the world's last remaining Siberian tigers and Amur leopards. The government said the company should have known the wood was illegally sourced.

The plea agreement is unrelated to the controversy over some of Lumber Liquidators' laminate flooring from China, which CBS "60 Minutes" has reported contains high levels of the carcinogen formaldehyde.

Caterpillar weighed down by slowing global economic growth

By The Associated Press

PEORIA, Ill. (AP) — Caterpillar was stung by ongoing weakness in the mining and oil and gas industries during the third quarter and revenue fell short of expectations.

The construction and mining equipment maker lowered its full-year earnings forecast with expectations that the costs of restructuring the company will rise sharply.

Shares fell more than 2 percent before the opening bell Thursday.

Last month Caterpillar announced another round of job cuts that could exceed 10,000 people through 2018. The company said that it would cut as many as 5,000 people mostly by the end of this year from its salaried and management workforce. It then could cut thousands more, raising the total above 10,000, as it figures out which factories and manufacturing sites to close through 2018.

Venezuela's ex oil czar dismisses media report of corruption

By The Associated Press

CARACAS, Venezuela (AP) — Venezuela's representative to the United Nations is dismissing a Wall Street Journal article about a U.S. probe into billions of dollars in bribes allegedly paid to executives at the country's state-run oil giant that he used to run.

Rafael Ramirez posted messages on Twitter Thursday describing the report as attacks by "enemies of the people" in retaliation for the late President Hugo Chavez's recovery of the nation's oil wealth for the benefit of Venezuelans.

The Journal report Thursday is based on anonymous sources and law enforcement documents. It says a consulting business belonging to Ramirez's cousin demanded huge kickbacks from international vendors in exchange for awarding contracts with the PDVSA oil company.

Venezuela's government has yet to respond to the report.

A message from the American Petroleum Institute

America is now the world's #1 natural gas producer and will soon be #1 in oil. Now more than ever, abundant energy means abundant prosperity, opportunity and security for all Americans.

US-led forces strike IS-controlled oil field in Syria

By Vivian Salama

BAGHDAD (AP) — U.S.-led coalition forces in Iraq and Syria carried out a large-scale attack on Syria's Omar oil field as part of its mission to target the Islamic State group's ability to generate money, a coalition spokesman said Thursday.

Operations officer Maj. Michael Filanowski told journalists in Baghdad that airstrikes late Wednesday struck IS-controlled oil refineries, command and control centers and transportation nodes in the Omar oil field near the town of Deir el-Zour. Coalition spokesman Col. Steven Warren said the attack hit 26 targets, making it one of the largest set of strikes since launching the air campaign last year.

The refinery generates between $1.7 and $5.1 million per month for the Islamic State group.

"It was very specific targets that would result in long-term incapacitation of their ability to sell oil, to get it out of the ground and transport it," Filanowski said.

Southern Thailand hit by the worst haze from Indonesia ever

By The Associated Press

BANGKOK (AP) — Southern Thailand was hit Thursday by the most severe haze ever from forest fires in Indonesia, forcing all schools in a province to close and disrupting flights in a popular tourist area, officials said.

Thailand's south boasts beaches popular among tourists in Surat Thani and Phuket, two of the seven provinces suffering from the haze.

The haze, which has shrouded parts of Malaysia and Singapore for nearly two months,

reached hazardous levels in the Thai city of Songkhla, with the pollution index hitting a record-high reading of 365. A reading of 101-200 is unhealthy, 201-300 is very unhealthy and above 300 is hazardous.

"This is a crisis," said Halem Jemarican, head of the Southern Environment Office. He said the pollution index in southern Thailand has never exceeded 300 before.

Subject: Car emissions testing: 'The whole system is corrupt' (EU Observer)

Car emissions testing: 'The whole system is corrupt'

EUObserver (BRUSSELS, 21. OCT) - Volkswagen is not the only car company that used illegal devices to cheat emissions tests, said Axel Friedrich, a German emissions testing expert who is a co-founder of the NGO that notified US authorities something was wrong with VW's test results. "You will see tomorrow night on German television the next case", Friedrich said on Wednesday (21 October) in the European Parliament.

"It's not only diesel, it's also gasoline. The whole system is corrupt", he added.

Although he refused to single out companies, he noted that he "heard a number of statements [from other car companies] which I know are lies. We'll realise this in the next couple of weeks."

According to Friedrich, it was already well-known to those involved that car companies must have been cheating during the laboratory tests.

But Volkswagen "tried to keep it secret. This is when journalists get more interested. If it's open, nobody cares. If it's secret, you jump on it", he told a group of around twenty journalists during a round-table discussion organised by the parliament's left-wing Green group.

But the signs were there. While the cars did well on the laboratory tests, air quality in Europe's cities did not improve in tandem.

More than half of the EU's member states are currently facing infringement procedures from the European Commission for failing to comply with EU targets on air quality.

"If the car [industry] would not [have been] cheating, we would have met all these goals of the air quality

directive", said Friedrich.

The German retiree is former director of the Environment, Transport and Noise Division of the German federal environmental agency, but recently became a regular voice in German media after the Volkswagen scandal involving illegal software which allowed VW's cars to appear much cleaner than they actually were.

The scandal was exposed after US authorities investigated claims from the International Council on Clean Transportation, an NGO of which Friedrich was one of the founders.

Friedrich praised the US Environmental Protection Agency (EPA) which carries out random checks even after cars are certified.

Industry lobby

"We have 28 European agencies for certification. They compete. We have more than 50 certification test labs. They compete. And nobody controls them. … We make laws, but no enforcement. We have big industries which lobby heavily to avoid these controls."

Under EU rules that came into force in 2007, member states should have had by 2009 "effective, proportionate and dissuasive" penalties in place for the use of defeat devices.

"It's 2015, can somebody name me one member state that has done this? I don't know one", said Friedrich.

A Commission spokesperson told this website that all 28 EU countries have told the Commission that they transposed the relevant directive.

"This information suggests that they have implemented a system of penalties, although many Member States have not communicated their national rules to the Commission separately", the spokesperson said.

She did not want to comment on whether the Commission has started infringement procedures against those countries, but did stress the Commission is "following national authorities' policing and enforcement

of EU rules in the automobile sector very closely".

Real driving

Friedrich proposes scrapping laboratory tests altogether, and only having random surprise checks under real driving conditions.

"We spend billions per year on tests in a lab. Useless. … We want to clean up the environment, not the labs", he noted.

The Commission has introduced a new test called the Real Driving Emission (RDE) test, the final elements of which are currently being negotiated.

In a written response to questions from MEPs during a heated plenary debate earlier in October, industry commissioner Elzbieta Bienkowska wrote that the RDE test procedures "will be an appropriate answer to the shortcomings of laboratory testing and will considerably reduce the risk of defeat devices being used".

However, Friedrich does not share this assessment, saying that industry is doing its utmost to ensure that this 'real drive' test does not replicate real driving conditions.

He noted that the conditions during which RDE tests will be taken, are not average driving conditions and exclude, for example, a car motor standing idle for a while (as would be the case in a traffic jam).

Coming up in plenary

The European Parliament, meanwhile, is working on a text to adopt next week during its plenary session in Strasbourg. The MEPs will vote to decide whether they want the Commission to launch an investigation, or failing that, a parliamentary investigation. A call for an independent EU agency that oversees emissions compliance is also proposed.

The Commission has repeatedly stated that it does not have the power to investigate the scandal.

Dutch Green MEP Bas Eickhout says that while strictly legally speaking that may be true, there are "plenty angles" which the Commission could use, such as a state aid probe.

"The EU also does not have power over taxation, yet it still investigated tax rulings via a state aid case."

Subject: VW News Blast
+ENV_ENFORCEMENT-#2549843-v1-VW_News Article Log.xlsx

Good afternoon All,

Please see the attached spreadsheet, which contains a list of new articles that we've collected so far. The entries on the attached log are arranged by date and include a brief synopsis of the article as well as a link to the article. For those of you that have access to the "R" drive, the articles are available on the "R" drive at:

R:\Database\EES\U.S_v_Volkswagen_90-5-2-1-11386\News Articles

If you do not have access to the "R" drive and are unable to access the article using the link above, please contact me or Ex. 7 and we will provide you with a copy of the article.

Everyone that receives this e-mail has been added to the VW news blast that originates from Justice Libraries. Within the next day or two, you should start receiving media blasts from Lila Faulkner that will contain recent Volkswagen Audi news headlines as well as summaries and links to those articles. We will continue to monitor other sources and will continue to save new articles to the "R" drive. And, to the extent that an article is saved that was not included in the media blast from Justice Libraries, a separate e-mail will be sent to supplement Justice Libraries' media blast.

Lastly, if you would like to be removed from the e-mail distribution list, please e-mail me or Ex. 7 with the words "unsubscribe" in the body of the e-mail.

Thank you,

Ex. 7

Volkswagen AG said that Vahland decided to leave because of

VW's TDI engines and advanced diesels that are on sale in Europe are nothing like the poky, smoky oil burners sold here during the gas crunches of past decades. Now they're smooth, quiet, and powerful, and they typically endure beyond 200,000 miles and require less maintenance than gas engines.

Bohl and the Bosch believe the emissions battle can be successfully waged in the cylinder. Furthermore, EGR absorbs heat, which reduces NOX.

Space-age fuel-injection systems in development are expected to finish the cleanup job and account for a large part of the cost differential between modern diesel and gasoline engines.

At the top of the heap is the VW Touareg V-10 TDI, whose state-of-the art aluminum-block engine uses unit injectors good for 31,200 psi of squirt.

Volkswagen will sell the Touareg V-10 TDI later this year, and it's pretty likely to blaze a trail that will be followed by other large diesel-powered SUVs. The point is that, despite its brisk acceleration, the Touareg never seems lithe or nimble—always brutishly powerful.

With diesel fuel prices down and rivals' diesel programs halted, German carmaker Audi has launched a U.S. marketing push.

A new diesel engine that is expected to return 45-46 mpg on the highway will power the 2015 Volkswagen Golf, Beetle, Passat and Jetta, Volkswagen Group of America. The new Volkswagen EA288 diesel engine "will eventually replace all the 2.0-liter TDI Clean Diesel engines fitted in Audi and Volkswagen TDI Clean Diesel mode

Audi introduces their 2014 clean diesel vehicles with 60 second spot called The Station. The Director of Marketing for Audi said, “Since the introduction of TDI in 2009, Audi has been at the forefront of clean diesel with an increased commitment to providing drivers with more options."

VW takes this matter very seriously and is cooperating with the investigation. The company is committed to fixing this issue as soon as possible.

Agency officials issued the car company a notice of violation and said it had admitted to the use of a so-called defeat device. The recall involves 4-cylinder Volkswagen and Audi vehicles from model years 2009-15.

The US government has ordered Volkswagen to recall almost 500,000 cars after discovering that the company deployed sophisticated software to cheat emission tests allowing its cars to produce up to 40 times more pollution than allowed.

For years we've been praising Volkswagen's TDI vehicles for their excellent blend of driving performance and fuel efficiency, but a recent claim by the US Environmental Protection Agency asserts that VW's diesel emissions may not be as clean as we've been led to believe.

Volkswagen AG admitted to systematically cheating U.S. air pollution tests, leaving the automaker vulnerable to billions in fines and possible criminal prosecution.

Installed in four-cylinder cars, the software, which the EPA calls a "defeat device" allowed diesel Jettas, Beetles and other cars to "emit up to 40 times more pollution" than allowed under U.S. emission standards.

The world's largest automaker has admitted selling 482,000 such diesels in the United States since 2009. The scandal could cost billions of dollars in fines and threatens to stunt the development of all diesel vehicles.

As a result of this scandal, VW CEO Winterkorn issued the following, "I personally am deeply sorry that we have broken the trust of our customers and the public. We will cooperate fully with the responsible agencies, with transparency and urgency, to clearly, openly, and completely establish all of the facts of this case"
VW is to stop selling four cylinder diesel cars in the US after the firm was found to have rigged emissions test on up to 500,000 vehicles, it has emerged.

The Volkswagens were spewing harmful exhaust when testers drove them on the road. In the lab, they were fine. Discrepancies in the European tests on the diesel models of the VW Passat, the VW Jetta and the BMW X5 last year gave Peter Mock an idea

Volkswagen shares plunged more than 20 percent on Monday, their biggest one-day fall, after the German carmaker admitted it had rigged emissions tests in the United States, and U.S. authorities said they would widen their probe to other manufacturers.

The defeat software allowed VW cars to activate emission controls during emission tests but during normal use the vehicles would release up to 40 times the permitted amount of nitrogen oxides, which causes breathing issues and is linked to millions of early deaths.

The device, which is described in the NOV as a sophisticated software algorithm on certain Volkswagen vehicles detects when the car is undergoing official emissions testing and activates full emissions controls is found in four-cylinder VW and Audi diesel cars from models.

Consumers who own cars that aren't doing what they're intended to do will expect compensation.

The company said that 11 million of its diesel cars were equipped with software that could be used to cheat on emissions tests. The company said it would set aside 6.5 billion euros ($7.3 billion), which is equivalent to a half a year's profit, to cover the cost of making the cars comply with pollution standards.

CEO Martin Winterkorn apologized that VW betrayed customers' trust and promised that the company would clarify the origin and extent of the issue. He added that everything will be put on the table at this time, as quickly, thoroughly and transparently as possible.

VW's strategy to market their vehicles to upscale professional has backfired and allowed class action lawyers to mobilize quickly. Reason being, the Plaintiffs lawyers do not have to look far for clients because many of their friends and colleagues owned the cars.

The software that allegedly causes Volkswagen cars to cheat official emissions tests exists in only one type of diesel engine, according to the carmaker — and it has sold 11 million of them around the world. The company says it's setting aside 6.5 billion euros (around $7.25 billion) to fix the cars.

EPA officials said the software, dubbed a "defeat device," made about 482,000 Volkswagen diesel-powered cars appear cleaner running than they were.

Volkswagen has revealed that 11 million diesel cars worldwide are equipped with devices that can cheat pollution tests, a dramatic expansion of a scandal that immediately sent its shares plummeting by another 20 per cent.

Michael Horn, chief executive of the Volkswagen Group of America, used the launch of the 2016 Passat to issue an abject apology saying "Our company was dishonest, with the EPA and the California Air Resources board, and with all of you and in my German words, we have totally screwed up."

The lawsuit contends that Volkswagen's decision to prey on environmentally-conscious consumers who paid thousands of dollars for a cleaner-running vehicle is despicable and in violation of multiple state and federal consumer and environmental laws.

Attorney General Eric Schneiderman said Tuesday that his office will join investigations of Volkswagen following reports about how the automaker installed software in diesel-powered cars to cheat emissions tests.

No company should be allowed to evade our environmental laws or promise consumers a fake bill of goods. My office is investigating troubling reports that millions of Volkswagen cars carried software designed to cheat emissions tests

Volkswagen has been cheating on its US government emissions tests for years. And it was a small, independent research institution that caught it.

"Above all, I am stunned that misconduct on such a scale was possible in the Volkswagen Group. As CEO I accept responsibility for the irregularities that have been found in diesel engines and have therefore requested the Supervisory Board to agree on terminating my function as CEO of the Volkswagen Group."

The Executive Committee discussed the manipulation of emissions data and recognizes economic damages as well as loss of trust among customers. Recommendation for new personnel will be presented at Friday's meeting.

Volkswagen CEO Martin Winterkorn stepped down Wednesday over a scandal in which the German carmaker admitted to rigging its diesel cars' emissions to pass U.S. emissions tests

The German Green Party said ministers knew in summer about Volkswagen rigging emissions tests but that 'tricks and deceits' were 'accepted with a wink'.

If these vehicles were driven at the average annual US mileage, the vehicles would have spewed between 10,392 and 41,571 tons of toxic gas into the air each year.

Volkswagen's "clean diesel" vehicles have been responsible for emitting aggravating nitrogen oxide for the last six years.

The authors explore the possible ramifications for UK owners of Volkswagen vehicles.

In April of 2015, Volkswagen of America, Inc. sent letters to California owner of diesel-powered Audis and Volkswagen informing them of an emissions service action" affecting the vehicles.

The company's use of a "defeat device" to skirt emissions testing has rocked both the business world and countless unwitting drivers.

A class-action lawsuit has been filed on behalf of anyone who bought diesel-engine Volkswagens in Iowa.

Attorney General Mark R. Herring announced that Virginia has joined the executive committee of a multistate investigation into Volkswagen for altering emissions software to produce favorable test results.

German government ministers reportedly turned a blind eye to Volkswagen installing cheat devices to fool U.S. diesel emissions tests, raising the possibility that the mushrooming scandal could cause embarrassment for Chancellor Angela Merkel.

All diesel car models in Britain are to be retested amid fears the Volkswagen scandal is an industrywide problem.

The research and development chiefs of Audi and Porsche, Ulrich Hackenberg and Wolfgang Hatz, will be removed by the supervisory board, as will VW's top executive in the United States, Michael
Horn, the senior source said.

After more than a year of stonewalling investigators, Volkswagen stunned two senior officials with the U.S. Environmental Protective Agency and California's environmental watchdog by admitting the automaker hacked its own cars to deceive U.S. regulators about how much their diesel engines pollute.

A $1-billion consumer fraud class action lawsuit has been filed in
Edmonton, Canada against Volkswagen stemming from the admission by the automaker that it sold vehicles that were designed to skirt emissions laws.

The extra pollution from Volkswagen's US cars can be expected to lead to an additional 5 to 27 premature deaths per year. If
extrapolated worldwide to all 11 million vehicles, VW's vehicle would be responsible for causing somewhere between 74 and 404 premature deaths each year.

Volkswagen board is meeting to appoint a new CEO following Martin Winterkorn resignation over the emissions scandal. Mattias Muller is the front runner.

Volkswagen fitted about 11 million cars worldwide (482,000 in the US) with a defeat device that would put the vehicle in a "safe mode" during testing and the engine ran below normal power and performance. Once on the road, the engine switched from this test mode and the engines emitted nitrogen oxide pollutants up to 40 times above what is allowable in the U.S.

Matthias Müller has been appointed CEO of Volkswagen AG with immediate effect. This was decided by the Supervisory Board at its meeting in Wolfsburg today (Friday).

The Supervisory Board of Volkswagen AG approved a new management structure for the Group and the brands as well as for the North America region on 9/25/2015 in Wolfsburg.

The Volkswagen Supervisory Board consulted intensively on the current situation at its meeting today. There is absolutely no excuse for the manipulations which have deeply shocked Volkswagen. The company will leave no stone unturned in getting to the bottom of this, will call those responsible to account, and take the necessary actions.

The internal evaluation revealed that approximately five million Volkswagen Passenger Cars brand vehicles are affected worldwide

The Environmental Protection Agency announced that it will begin road tests of all new vehicle models and vehicles already on the road to examine emissions claims following the exposure of Volkswagen's regulation-cheating scandal.

Volkswagen AG is facing a new round of legal challenges after admitting it cheated on emissions tests for years, with French, German and Swiss lawyers taking action against Europe's largest automaker.

A team of British scientists repeatedly warned the Government that emissions of a deadly pollutant from diesel cars far exceeded official safety levels. The scientists measured emissions from tens of thousands of diesel engine cars as they drove past sensors on roads in tests carried out since 2011.

Switzerland has banned sales of Volkswagen Group cars with outdated emissions systems in the
wake of the test-rigging scandal that started in the United States.

Since 2008, ,VW programed vehicles sold in the U.S. to falsify government emissions tests, which enabled diesel VWs to spew forty times more pollutants than the law allowed.

The cheat software (defeat device) was present in 11 million cars worldwide.

In addition to regulatory enforcement proceedings, the company faces possible criminal action as well as a host of consumer lawsuits. In addition, on September 25, 2015, plaintiff's lawyers filed a securities class lawsuit in the Eastern District of Virginia against VW.

Volkswagen's admission it cheated on emissions testing of its "clean diesel" engines has sullied the automaker's reputation, disrupted the entire industry and put diesel engines on trial in a country that was finally starting to embrace them.

The estimated VW pollution, about 46,000 tons since late 2008, is equivalent of about 4% of the power plant pollution reduction measured, meaning it could be expected to cause an estimated 106 deaths if it had similar effects.

The investigation aims to establish who was responsible and will look at Mr. Winterkorn's role in the worst crisis to hit VW in its 78-year history, according to a statement from prosecutors in Braunschweig, Germany.

Audi has admitted that 2.1 million of its cars sold contain the software designed to cheat emissions tests – 1.42 million are in Western Europe, 577,000 are in Germany, and 13,000 were sold by Audi in the US.

According to the report, Bosch claims to have supplied diesel engine-management software to Volkswagen under the impression that it would be used only in vehicle testing. That software, which was able to activate emissions control devices when a testing environment was detected and deactivate them during normal driving, somehow ended up in production vehicles.

Harris County seized on the outrage of the Volkswagen emissions scandal, saying in a multimillion dollar lawsuit that the German automaker contributed to the region's poor air quality.
Harris County Attorney is suing VW for $100 million dollars under Texas' Health and Safety Codes.

Op-Ed Contributor - The EPA should establish a network of roadside devices that would monitor vehicles more methodically for abnormal emissions.

Ryan is claiming that 6,000 rigged-up diesel cars would have made a difference in the pollution levels of a county with a population of more than 4 million people, most of them drivers.

The county estimated that beginning with the 2009 model year through the end of August 2015, Volkswagen sold more than 6,000 of the manipulated emissions vehicles within the county's borders.

A Volkswagen board member has admitted that
some staff acted criminally over the emissions
cheat tests.

The article indicates that whatever the fix is, there will be a loss of value, there will be degraded performance, the cars will have less efficient gas mileage, and they will still be polluting the environment.

The Executive Committee of the Supervisory Board of Volkswagen AG yesterday (September 30) discussed the current status with respect to the manipulation of diesel engine exhaust emissions.

Harris County filed the lawsuit against the car manufacturer claiming that emissions from 6,000 diesel cars circulating on roadways in the region have caused harm to the population and environment. This may be the first lawsuit filed by a government entity against the
car company since management admitted to falsifying emissions numbers of certain cars released since 2009.

Swiss officials say that new VW cars and newly imported vehicles may not receive registration for road use. According to AMAG, 129,000 vehicles in Switzerland have the software.

Attorneys general from at least 30 states and the District of Columbia are organizing a bipartisan coalition to investigate possibilities of consumer fraud and environmental violations.

The scandal swirling around Germany's largest listed company had its beginnings in an attempt to crack the U.S. market, the missing link in VW's global footprint. But what began as expansion ended in deception.

Volkswagen AG's designated Chairman Hans Dieter Poetsch warned managers that the diesel-emissions scandal could pose "an existence-threatening crisis for the company," as it pleaded for public trust with full-page ads in national newspapers.

Finance officials at embattled car maker Volkswagen AG are evaluating the impact of the company's emissions-cheating scandal on its finances, and assessing options should the crisis take a greater-than-anticipated toll on its €25 billion ($28 billion) cash cushion.

German Chancellor Angela Merkel has called Volkswagen's emissions-rigging scandal a "far-reaching event" and demanded the world's largest automaker quickly investigate it.

Volkswagen's pollution-control chicanery has not just been victimless tinkering, killing between five and 20 people in the United States annually in recent years, according to an Associated Press statistical and computer analysis.

A reduction in car values on Volkswagen AG models after its emissions scandal is the biggest risk to its bonds tied to auto loans, leases and dealerships worldwide.

Volkswagen began installing software devised to cheat on emissions tests in 2008 after realizing that a new diesel engine, developed at great expense, could not meet pollution standards in the United States and other countries.

The crisis has wiped out $34 billion in the company's value as shares have fallen. VW is yet to pinpoint who was responsible for cheating but several engineers admitted to creating the software aimed at cheating the tests.

The article question whether anyone at Volkswagen's Pollution Testing Center was complicit in this scheme.

The cost of its cheating on emissions tests in the U.S. is likely to run into the tens of billions of dollars and prematurely end its long-sought status as the world's biggest carmaker

After the news of the Volkswagen scandal, the mayor of Wolfsburg, Germany said that it was too soon to cite numbers, but announced a municipal hiring freeze and a halt on any new projects, despite the city's current balanced budget.

Volkswagen has admitted that 8 million vehicles were fitted with software capable of cheating diesel emissions tests in the European Union, a German newspaper said on Monday, citing a letter the carmaker sent to members of parliament.

Volkswagen told lawmakers, in a letter signed by VW lobbyists Thomas Steg and Michael Jansen obtained by the Associated Press, that 8 million type EA 189 diesel engines with a 1.2 liter, 1.6 liter, and 2.0 liter engine capacity are affected.

Volkswagen's sneaky violation of clean air standards were carried out by installing in-vehicle software that would make certain Volkswagen models emit lower levels of pollutants while being tested.

Two men (Ulrich Hackenberg and Wolfgang Hatz) who were top aides Martin Winterkorn during his time at Audi and were put in charge of R&D when Winterkorn became CEO are among individuals that the company is centering its efforts around and have been suspended during the investigation.

The news that Volkswagen was deliberately rigging the emissions test of some of its diesel models around the world was curiously caught by the EPA instead of Europe.

Volkswagen installed software designed to cheat on emissions tests in 2008 after realizing that a new diesel engine, developed at great expense, could not meet pollution standards in the United States and other countries.

This is obviously a heroic problem, but ongoing they make terrific products," Schwarzman said. "This will work its way through the legal system in some time. It just will be a very unfortunate time for their securities."

The emission scandal was a deliberate action to violate the law and fraudulently sell cars to customers who thought that they were buying vehicles that met mandated pollution standards.

Tennessee lawmakers will review the state's investment of hundreds of millions in incentives for VW AG's Chattanooga plant and provisions for recouping money if the company's emissions-cheating scandal threatens jobs.

Volkswagen AG was accused in a lawsuit of scheming to defraud investors who paid artificially inflated prices for the company's foreign shares while it cheated on vehicle emissions tests.

Michael Horn, president and chief executive officer of Volkswagen Group of America, will appear before a House Energy and Commerce subcommittee to address Volkswagen's use of defeat devices to cheat on federal emissions tests. The Subcommittee on Oversight and Investigations will hold the first hearing on Oct. 8.

The minority shareholder also signaled it might be open to investing separately in Scania --a Swedish truck maker that was the target of a hostile takeover by VW last year -- should the scandal result in a divestment of the unit.

VW's investigation focuses on two men elevated after Winterkorn was made CEO who found that they couldn't deliver as promised a clean diesel engine for the U.S. market.

There are about 2,684 Volkswagen vehicles registered in the state that have diesel engines with the software to cheat emission tests, according to the complaint filed Friday in Kanawha County Circuit Court.

Volkswagen began installing software designed to cheat on emissions tests in 2008 after realizing that a new diesel engine, developed at great expense, could not meet pollution standards in the United States and other countries, people with knowledge of the automaker's internal inquiry said on Sunday.

VW didn't have time to retrofit the engine with the AdBlue system or to make the changes that would've been necessary to retrofit the system to existing vehicles. It looks as though VW had to choose
between missing the 2009 model year in the United States or cheating on its tests — and chose to cheat.

The complaint, filed Oct. 2, asked the Kanawha County Circuit Court to require Volkswagen to pay at least $43 million in civil penalties and restitution over the sale of its "clean diesel" vehicles, which the company has admitted
Muller announces swift and relentless clarification of emission scandal.

Volkswagen AG CEO Matthias Mueller said the company will delay or cancel non-essential projects as pressure mounts to slash spending in the wake of the diesel-emissions scandal.

While this was an egregious attempt by Volkswagen, history is full of similar scandalous behavior by automakers and in two cases large suppliers to the auto-making industry.

Volkswagen's new CEO has told more than 20,000 workers that overcoming its emissions-rigging scandal will "not happen without pain" and that the company will have to review its investment plans.

The cost of its cheating on emissions tests in the U.S. is likely to run into the tens of billions of dollars and prematurely end its long-sought status as the world's biggest carmaker

Unless VW can come up with a miraculous fix that lets the affected vehicles meet pollution standards without diminishing mileage and performance — fat chance of that happening! — the vehicles' owners will take a financial hit.

Volkswagen and German industry have been rocked by charges that the VW used software to hoodwink regulators about the true emissions of its diesel cars for years. The crisis has wiped out almost 30 billion euros ($34 billion) of the company's value.

Volkswagen's decision to nominate a long-serving executive as chairman has once more highlighted the carmaker's corporate governance and culture, which some experts argue were a root cause of the diesel-emissions scandal.

Instead of rising to the difficult task of developing new technology to meet emission standards, Volkswagen cheated. It built a device that could detect when the car was being tested for emissions standards, and would temporarily change performance to pass the test.

Several engineers stated that they installed deception software in 2008 according to Bild newspaper. Bild did not reveal their identifies, but indicated that their statements had so far failed to unmask those who masterminded the scam.

Mueller told a German newspaper that it would take a year to fix all 11 million diesel vehicles world wide which contain emissions-cheating software.

Manipulations of emissions readings in diesel cars came from Volkswagen's headquarters in Wolfsburg, Germany, not the United States, Volkswagen CEO Matthias Mueller said Tuesday.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime."

Volkswagen of America CEO Michael Horn is scheduled to testify Thursday before a U.S. House subcommittee investigating last month's admission the company had installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars starting with the 2009 model year.

Texas Attorney General Ken Paxton today filed a lawsuit against Volkswagen Group of America, Inc. and Audi of America, LLC over violations of state consumer protection laws, along with a separate suit charging that the companies violated clean air standards in Texas.

The state's claims, in two lawsuits by Texas Attorney General Ken Paxton in state court in Austin, follow similar actions brought by West Virginia on Friday and a separate case by the county that encompasses Houston.

CEO of VW of America testified before the House Energy and Commerce subcommittee that he first learned about the potential problems with VW's diesel emissions in early 2014 and blames the installation of a defeat device on a couple of software engineers.

State prosecutors and police searched Volkswagen's offices in the Wolfsburg in a bid to secure documents and databases that could shed light on which employees were responsible for cheating pollution tests.

Lawmakers slammed an Environmental Protection Agency official who testified after Horn for not catching Volkswagen. Representative Michael Burgess, a Texas Republican, questioned the size of EPA's annual budget, noting that the cheating was uncovered by a West Virginia University study that had a budget of less than $70,000.

Police swooped on Volkswagen's headquarters carrying away files and hard disks as the investigation into the massive pollution cheating scandal expanded. Head of VW Group of America said that he believed a couple of software engineers were responsible for the software that allowed nearly a half million diesel powered cars to be sold in the US since 2008.

With nearly a half-million cars driving an average of 11,000 miles per year for nearly seven years, that could amount to anywhere from about 14,000 to 59,000 tons of additional nitrogen oxides.

Mercedes-Benz, Honda, Mazda and Mitsubishi have joined the growing list of manufacturers whose diesel cars are known to emit significantly more pollution on the road than in regulatory tests.

The city of Dallas said in a prepared statement Friday that it will not follow through on plans announced earlier this week to sue Volkswagen over possible emissions violations. The statement said the city was prepared to file the suit Thursday but shifted gears after learning that the state of Texas had already filed suit against the German automaker over alleged violations of air quality standards.

California has given carmaker Volkswagen until November 20 to come up with a plan to fix the diesel cars affected by its rigging of emissions tests. The CARB spokesman said the deadline represents 45 business days from an in-use compliance letter sent to Volkswagen dated Sept. 18.

Volkswagen's diesels don't appear to have been dented nearly as much on secondary markets, where owners sell used cars directly. Carlypso, a California based car-shopping startup, reported a price drop of .3 percent. That's right-all the hue and cry about a sinister plot to cheat emissions tests sent prices plunging by about $30.

Volkswagen could compensate owners of diesel-powered cars that emit high levels of pollutants, possibly by paying them for the lost value of their vehicles, the company's top U.S. executive said. Speaking to lawmakers investigating the emissions cheating, U.S. CEO Michael Horn said fixing most of the 500,000 affected cars in the United States could take one to two years, possibly more.

U.S. Sen. Charles Schumer says the federal government should seek the maximum possible fine from Volkswagen and demand that the automaker give rebates to buyers following the recent scandal over emissions testing

The EPA is investigating a second emissions-control software program in Volkswagen cars that were rigged to pass pollution tests, one that the automaker may have failed to properly disclose. The computer program is on the EA 189 diesel engines used since 2009 that are also fitted with software that the automaker has admitted was designed to fool emissions tests, according to a person familiar with the matter who asked not to be named because the information is private.

The diesel emissions scandal is going to be very expensive for Volkswagen. While the final figures will not be available for months, if not years, the estimated costs could be $25 billion if you make the calculations.

California owners of Volkswagen diesel vehicles affected by the emissions cheating scandal are demanding the company buy back their cars immediately, according to a new class action lawsuit filed against the German automaker Monday in federal district court in Santa Ana.

VW is recalling 1,950 diesel vehicles in China to change engine software it has admitted cheats on emissions tests and Singapore suspended sales of the company's diesel cars.

Following in the footsteps of Harris County and the city of Dallas, the state announced it is suing Volkswagen in connection with the German automaker's admitted use of software that allowed its vehicles to circumvent emissions limits.

The European Investment Bank is looking into loans made to Volkswagen AG to help fund the development of cleaner engines in light of the emissions scandal, EIB chief Werner Hoyer said. Volkswagen's cheating on diesel emissions is a "great shock" and must be analyzed since it threatens to hurt the climate credentials of the development bank.

S&P lowered the Wolfsburg-based company's rating on long- term debt to A-, the fourth-lowest investment grade, from A, and said another cut of as much as two notches is possible.

Volkswagen owners based in Arkansas, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas who are affected by this recall can seek legal counsel from seasoned product liability attorneys practicing at Sloan, Bagley, Hatcher & Perry Law Firm. The firm's website is: http://www.volkswagenemissionsscandal.com

A staffing company for Volkswagen's Chattanooga assembly plant said Monday the automaker has indicated it's "business as usual" for now in the wake of the emissions-rigging scandal. Lucas Hiler of VW contractor Aerotek said it's "maintaining the headcount" of about 200 workers who were hired this summer in connection with the $900 million expansion underway at the factory.

Janet McCabe said the agency is “upping our game” following VW’s admission last month that it cheated on emissions tests for more than 11 million diesel cars worldwide. The EPA will conduct more spot checks of light-duty cars and trucks, testing vehicles owned by individuals and rental companies in real-world driving conditions.

Last year VW ranked third in the semi-regular report card. Reports concerning VW's diesel vehicles is not only a black eye on the company, but it also calls into question how queen the VW fleet truly is.

Paramount Pictures and Leonardo DiCaprio’s production company Appian Way have optioned the rights to a book proposal from New York Times journalist Jack Ewing about the ongoing debacle.

Volkswagen-backed Bundesliga club Wolfsburg postponed the construction of a youth training center Tuesday because of the German car manufacturer’s emissions-rigging scandal.

Volkswagen's flagship brand plans to change its diesel technology in Europe and North America as well as develop new hybrid and electric vehicles in response to its emissions scandal.

VW's cooperation with investigators will be the true measure of how it will be treated by the Justice Department in its criminal investigation. And on that front, there is reason to question just how cooperative Volkswagen will be as it faces scrutiny that now includes a second computer program that affected how emission controls operated in its cars.

The 2016 models have not been certified for sale by the U.S. Environmental Protection Agency.

Volkswagen announced that it would revamp the technology it uses for controlling diesel exhaust in future models as it struggles to overcome an emissions cheating scandal that has battered its reputation and threatened its financial stability.

Volkswagen AG will reduce annual investment by about 1 billion euros ($1.1 billion) at its namesake car brand as the automaker steps up a cost-cutting push to weather the impact of the diesel-emissions scandal.

Volkswagen announced that it will cut investment at its biggest division by 1 billion euros and will overhaul the model strategy at its
core VW division, giving a greater focus to electric and hybrid vehicles.

The Volkswagen scandal is putting new pressure on European policy makers to roll out tougher vehicle-testing standards that measure emissions based on how cars are actually driven, not how they perform in a lab. It is also reinforcing plans by some European cities to restrict diesel vehicles from their streets, a blow to the European auto industry's huge investments in diesel technology.

VW announced that they will switch to a different technology for treating diesel emissions in Europe and North America "as soon as possible" and that VW cars "will only be equipped with exhaust emissions systems that use the best environmental technology."

The newly-formed Volkswagen Brand Board of Management took further strategic decisions at a special meeting. CEO Dr. Herbert Diess announced major product decisions: a reorientation of the diesel strategy with the most advanced technologies, the development of a standardized electric architecture for passenger cars and light commercial vehicles, and a new approach for the next generation of the Phaeton.

The author contends that the diesel industry as a whole is a potential victim of VW's scandal and questions whether the scandal will taint the proven benefits of clean diesel technology.

Following revelations that Volkswagen cheated on emissions tests, the automaker is anticipating a decline in sales. VW is also cutting production and freezing hiring.

Sens said that Volkswagen AG should repay more than $200 million in ill-gotten tax credits over its alleged use of software to cheat emissions testing and urged the U.S. Environmental Protection Agency to set the maximum possible fine.

Toyota Motor Corp announced that it is targeting a 90% reduction in emissions from its new vehicles by 2050. The chairman also said that Volkswagen's rigging of diesel engines with software has damaged trust in the industry.

Volkswagen announced that it will cut investment plans at its biggest division by $1.1 billion a year and step up development of electric vehicles as it battles to cope with the fallout from its cheating of diesel emissions tests.

Volkswagen AG said that Vahland decided to leave because of conflicting ideas about the structuring of the division and explicitly said that his resignation isn't connected to the emissions testing scandal embroiling the company. Vahland had been appointed at the same time Matthias Muller took the German automaker's reins after its previous CEO stepped down last month.

Volkswagen division head Herbert Diess announced that the company would adopt selective catalytic converter technology, which is a system that injects the chemical substance urea into the exhaust stream to neutralize harmful nitrogen oxides.

US regulators contend that they have a lot more questions for Volkswagen, which was triggered by the company's recent disclosure of additional suspect engineering of 2016 diesel models that potentially would help exhaust systems run cleaner during government tests.

In six separate petitions all filed in state court in Dallas, plaintiffs including Mark Azam, Placido Ballariano and nearly 100 others made nearly identical claims arising from the U.S. Environmental Protection Agency's announcement last month that certain Volkswagen AG diesel models were fitted with a so-called "defeat device" software.

At least 30 managers were involved in Volkswagen's emissions test cheating, German magazine Spiegel reported. Spiegel, citing preliminary results of probes by law firm Jones Day and Volkswagen itself, said the dozens of managers would be suspended.

Volkswagen has exposed the deep conflicts in the world of European emissions testing, where car manufacturers hire outside firms to certify their pollution controls in laboratories. Not only is TÜV Nord at the forefront of finding a new testing regimen for automakers, but it is also the company that signed off on VW's emissions tests in Europe.

At the present time, New Yorkers who own affected Volkswagens will not be prevented from driving their cars," Department of Motor Vehicles spokesman Joe Morrissey told the Democrat and Chronicle

Volkswagen has used two basic types of technology to reduce emissions of nitrogen oxides from diesel engines, by either trapping the pollutants or treating them with urea.

Paul Willis, managing direct of VW UK, claims that the company's cars have not emitted any more toxic nitrogen oxides than expected, despite the use of cheat devices which drastically reduced
pollution emissions in official tests.

Volkswagen deserves to suffer "substantial damage" because of the diesel emissions scandal that has rocked the carmaker and affected 11m vehicles worldwide, the British transport secretary has told MPs.

Italian authorities have searched the headquarters of Volkswagen Italia as part of a local investigation into the emissions testing scandal at the German automaker. Volkswagen bought a full-page advertisement in Turin daily La Stampa on Tuesday apologizing for the "grave error" and promising to do everything to win back the trust of Italians.

Regulators say they have more questions for Volkswagen, triggered by the company's recent disclosure of additional suspect software in 2016 diesel models that potentially would help exhaust systems run cleaner during government tests. The delay means that thousands of 2016 Beetles, Golfs and Jettas will remain quarantined in U.S. ports until a fix can be developed, approved and implemented.

A lot of this could have been avoided with a carbon tax. A carbon tax would not help reduce local air pollutants such as NOx so it would not replace all auto pollution regulations. But it could supplant those that aim to reduce carbon emissions from vehicles.

Volkswagen AG to conduct a mandatory recall of diesel models installed with software that cheats emission tests. Winfried Vahland, the chief executive of the auto maker's Skoda Auto business and CEO-designate of a new organization that would group its U.S., Canadian and Mexican operations, resigned abruptly.

German authorities on Thursday ordered a recall of all Volkswagen cars fitted with emissions test-cheating software, a decision that will affect 8.5 million VW diesel vehicles across the 28-nation European Union.

The move reflects the difficulty that Volkswagen faces in fixing the 11 million vehicles worldwide that contain a so-called defeat device, which effectively lowered emissions for testing purposes. The company is indicating that the repairs may stretch beyond the end of 2016.

The U.S. attorney's office in Detroit and the Justice Department's Fraud Section joined a sweeping federal probe of Volkswagen AG over emissions-test cheating signaling the government's intent to cast a broad net and explore numerous paths to a possible criminal case. The involvement of the U.S. attorney in Detroit, Barbara McQuade, signals her office may take a key role in what is expected to be a major case.

Research suggests there may have been hints of the still unfolding diesel emissions scandal at Volkswagen AG hidden in corporate sustainability reports.

Volkswagen has announced that they've hired Christine Hohmann-Dennhardt as an executive on its top management body tasked with integrity and legal affairs. Hohmann-Dennhardt begins on January 1 and has served as a judge on Germany's Federal Constitutional Court and as justice minister.

The VW Group brands grew deliveries by 3.5 percent on the overall European market in the first three quarters, handing over a total of 3.07 million vehicles to customers. Between January 2015 to September 2015, 453,500 delivers were made to customers in the United States, which is a 3.2% increase over last year.

The scandal around Volkswagen AG won't have a direct impact on trade talks between the European Union and the U.S., though it's bad for the company's trustworthiness, EU Trade Commissioner Cecilia Malmstrom said

Prosecutors investigating Volkswagen's use of emissions test-cheating software in some of its diesel engines say they're putting together a group of about 20 investigators to evaluate the massive amount of data seized from the car manufacturer.

Volkswagen saw its market share in Europe drop fractionally in September, when its emissions scandal broke mid-month, as its sales growth lagged the wider market. However, VW Group sales, comprising all VW brands including its luxury marquees, rose by 8.4 percent in the European Union.

The European carmaker's association ACEA said Friday that sales of VW brand cars in the EU rose by 6.6 percent, while the group's overall sales, also including other brands, were up 8.4 percent.

Even after quitting as chief executive of the carmaker on Sept. 23, Winterkorn continued to hold the title of chief executive of Porsche Automobile Holding SE, which owns more than half of Volkswagen's voting shares. Winterkorn will resign as chief executive of the company that holds a majority of Volkswagen shares, which will end his formal influence over the carmaker.

French authorities have searched the headquarters of Volkswagen France as part of a local investigation into the emissions testing scandal and seized computer equipment.

Even as Volkswagen embarks on the task of fixing the emissions systems it disabled on almost 500,000 of its diesel vehicles in the United States, the automaker faces another hurdle: persuading owners to make the repair at all. So for owners, the prospect of having a car's emissions cleaned up, only to have the car perform worse — whatever the pollution — is not sitting well

Gary Bishop and Donald Stedman of the University of Denver, cited test data from California and Colorado showing that, beginning in 2008 and through 2014, emissions from passenger cars with 2.0-liter class diesel engines were significantly higher than allowed by USEPA Tier 2 emissions standards.

Pricing starts at $22,440 for the 1.8T S model with automatic transmission. At the top, the 1.8T range, the SEL Premium starts at $34,270.

VW issued a voluntary safety recall affecting the Passenger Occupant Detection System (PODS) control module on certain 2015 model year Volkswagen e-Golf, Golf and Jetta vehicles.

Volkswagen's betrayal ripples on: Lane relied on Green Car Journal, which, in making its now-rescinded award, relied on data from the Environmental Protection Agency, which, in turn, relied on the honesty of Volkswagen. That trust has been broken.

Volkswagen AG may have to consider an overhaul of a 12-brand empire built in the last two decades that makes everything from cheap cars to motorbikes to heavy trucks.

Frank Tuch, Volkswagen's head of quality control, is the fifth high-ranking executive to be suspended in connection with revelations that 11 million Volkswagen vehicles were equipped with software designed to trick emissions tests

Volkswagen said 2.6 billion euros ($3 billion) of loans or leases for vehicles built with engines using emissions=cheating software were packaged into asset-backed securities. The loans were found in 15 securitizations.

Volkswagen's employee council and Germany's biggest industrial union are demanding "transparency at all levels" of the company following the emissions-rigging scandal.

With billions of dollars at stake in restitution and penalties,
U.S. states are moving quickly to try to hold Volkswagen accountable for its emissions cheating scandal. But, "[u]ntil the criminal case clears, nobody is going to talk civil. Volkswagen will not settlement until the criminal investigations are resolved," said James Tierney.

Over two thirds of German consumers (65 percent) believe that the embattled German carmaker still builds "outstanding" cars and that the emissions scandal was overdone. 63 percent either agreed or strongly agreed that the emissions scandal would be forgotten and, within a year, no one would be discussing the affair surrounding the rigged diesel engines

Police raided two Volkswagen offices near Paris. Volkswagen officials have confirmed the raids and said that they are cooperating with French officials to uncover the truth behind the worsening scandal surrounding emissions-test-cheating software installed on a range of Volkswagen's diesel vehicles.

The German state of Lower Saxony has filed a criminal complaint after discovering that a file on scandal-hit Volkswagen had disappeared. A spokeswoman for the state government says the file, which included internal government memos on the emissions

Volkswagen AG's "dieselgate" isn't the only scandal involving the German automaker, as the company's major shareholder, Porsche SE, and its two former executives face a trial on market manipulation charges. When VW managers called for clean diesel without the urea system, "they must have known that it's impossible, or else it's not possible they have degrees as engineers," Dudenhöffer says.

It's not credible that top managers were unaware corners had been cut, says Dudenhöffer, who worked at Porsche and other carmakers before entering academia. VW is a company where the engineers are in charge.

VW ordered a halt to sales in Europe of all models that feature diesel engines equipped with defeat devices meant to falsify emissions compliance, the latest in a global scandal expected to cost the German automaker billions of dollars. Volkswagen told Reuters that this stop-sale only affects a small number of vehicles, and those cars would be sold once fixed.

Volkswagen may have to set aside more than the 6.5 billion euros ($7.4 billion) it has so far allocated to cover the costs of an emissions scandal if car sales suffer.

Norwegian shipowner I.M. Skaugen has disclosed it is seeking $50 million in compensation from a marine unit of Volkswagen for rigging performance tests of ship engines produced over a decade ago. I.M. Skaugen sees similarities between MAN's handling of the ship engine tests under VW ownership and the German company's response to the biggest scandal in its 78-year history

Volkswagen said it was investigating whether some versions of another diesel motor line, known as the EA 288, also had software intended to detect when a vehicle was undergoing emissions testing and turn on pollution controls. The EA 288 was installed in cars sold in the United States.

The news follows a slow drip of circumstantial evidence suggesting that its doctoring of emissions data involved more people and more cars than previously admitted. If substantiated, that could lead to VW facing far larger fines and criminal penalties than reckoned with so far.

The automaker asked a panel of federal judges to combine the more than 350 lawsuits against it in federal court in Alexandria, Va., a venue known for moving cases quickly and also the one closest to its U.S. headquarters in Herndon. Volkswagen listed Detroit as an alternate choice, while opposing requests by some car owners' lawyers to send the case to California.

Volkswagen AG said its current-generation diesel engine doesn't have software designed to cheat on emissions tests, meaning its global recall of as many as 11 million cars won't need to be even bigger. "After a thorough review it is now clear" that the offending software isn't installed in vehicles with EA 288 motors built under previous Euro-5 standards, Volkswagen said.

VW plans to recall 17,057 Amarok pickup trucks sold in Brazil to correct software allowing the vehicles to cheat on emissions tests. The recall affects Amaroks with 2.0-liter diesel engines built in Argentina during model year 2011 and part of 2012.

The German carmaker will need to install parts for vehicles already on the road that weren't designed to accommodate the equipment. The work may need to be done in special shops set up for the purpose. And it will have to pass muster with dozens of countries with their own regulations.

The strategy focuses on positioning the Volkswagen Group as a global economic and environmental leader among automobile manufacturers.

Subject: VW News Blast

Good afternoon All,

Please see the attached spreadsheet, which contains a list of new articles that we've collected so far. The entries on the attached log are arranged by date and include a brief synopsis of the article as well as a link to the article. For those of you that have access to

the "R" drive, the articles are available on the "R" drive at:

Ex. 7

If you do not have access to the "R" drive and are unable to access the article using the link above, please contact me or Heather Henderson and we will provide you with a copy of the article.

Everyone that receives this e-mail has been added to the VW news blast that originates from Justice Libraries. Within the next day or two, you should start receiving media blasts from Lila Faulkner that will contain recent Volkswagen Audi news headlines as well as summaries and links to those articles. We will continue to monitor other sources and will continue to save new articles to the "R" drive. And, to the extent that an article is saved that was not included in the media blast from Justice Libraries, a separate e-mail will be sent to supplement Justice Libraries' media blast.

Lastly, if you would like to be removed from the e-mail distribution list, please e-mail me or Heather Henderson with the words "unsubscribe" in the body of the e-mail.

Thank you,

Detric

Volkswagen AG said that Vahland decided to leave because of

VW's TDI engines and advanced diesels that are on sale in Europe are nothing like the poky, smoky oil burners sold here during the gas crunches of past decades. Now they're smooth, quiet, and powerful, and they typically endure beyond 200,000 miles and require less maintenance than gas engines.

Bohl and the Bosch believe the emissions battle can be successfully waged in the cylinder. Furthermore, EGR absorbs heat, which reduces NOX.

Space-age fuel-injection systems in development are expected to finish the cleanup job and account for a large part of the cost differential between modern diesel and gasoline engines.

At the top of the heap is the VW Touareg V-10 TDI, whose state-of-the art aluminum-block engine uses unit injectors good for 31,200 psi of squirt.

Volkswagen will sell the Touareg V-10 TDI later this year, and it's pretty likely to blaze a trail that will be followed by other large diesel-powered SUVs. The point is that, despite its brisk acceleration, the Touareg never seems lithe or nimble—always brutishly powerful.

With diesel fuel prices down and rivals' diesel programs halted, German carmaker Audi has launched a U.S. marketing push.

A new diesel engine that is expected to return 45-46 mpg on the highway will power the 2015 Volkswagen Golf, Beetle, Passat and Jetta, Volkswagen Group of America. The new Volkswagen EA288 diesel engine "will eventually replace all the 2.0-liter TDI Clean Diesel engines fitted in Audi and Volkswagen TDI Clean Diesel mode

Audi introduces their 2014 clean diesel vehicles with 60 second spot called The Station. The Director of Marketing for Audi said, “Since the introduction of TDI in 2009, Audi has been at the forefront of clean diesel with an increased commitment to providing drivers with more options."

VW takes this matter very seriously and is cooperating with the investigation. The company is committed to fixing this issue as soon as possible.

Agency officials issued the car company a notice of violation and said it had admitted to the use of a so-called defeat device. The recall involves 4-cylinder Volkswagen and Audi vehicles from model years 2009-15.

The US government has ordered Volkswagen to recall almost 500,000 cars after discovering that the company deployed sophisticated software to cheat emission tests allowing its cars to produce up to 40 times more pollution than allowed.

For years we've been praising Volkswagen's TDI vehicles for their excellent blend of driving performance and fuel efficiency, but a recent claim by the US Environmental Protection Agency asserts that VW's diesel emissions may not be as clean as we've been led to believe.

Volkswagen AG admitted to systematically cheating U.S. air pollution tests, leaving the automaker vulnerable to billions in fines and possible criminal prosecution.

Installed in four-cylinder cars, the software, which the EPA calls a "defeat device" allowed diesel Jettas, Beetles and other cars to "emit up to 40 times more pollution" than allowed under U.S. emission standards.

The world's largest automaker has admitted selling 482,000 such diesels in the United States since 2009. The scandal could cost billions of dollars in fines and threatens to stunt the development of all diesel vehicles.

As a result of this scandal, VW CEO Winterkorn issued the following, "I personally am deeply sorry that we have broken the trust of our customers and the public. We will cooperate fully with the responsible agencies, with transparency and urgency, to clearly, openly, and completely establish all of the facts of this case"
VW is to stop selling four cylinder diesel cars in the US after the firm was found to have rigged emissions test on up to 500,000 vehicles, it has emerged.

The Volkswagens were spewing harmful exhaust when testers drove them on the road. In the lab, they were fine. Discrepancies in the European tests on the diesel models of the VW Passat, the VW Jetta and the BMW X5 last year gave Peter Mock an idea

Volkswagen shares plunged more than 20 percent on Monday, their biggest one-day fall, after the German carmaker admitted it had rigged emissions tests in the United States, and U.S. authorities said they would widen their probe to other manufacturers.

The defeat software allowed VW cars to activate emission controls during emission tests but during normal use the vehicles would release up to 40 times the permitted amount of nitrogen oxides, which causes breathing issues and is linked to millions of early deaths.

The device, which is described in the NOV as a sophisticated software algorithm on certain Volkswagen vehicles detects when the car is undergoing official emissions testing and activates full emissions controls is found in four-cylinder VW and Audi diesel cars from models.

Consumers who own cars that aren't doing what they're intended to do will expect compensation.

The company said that 11 million of its diesel cars were equipped with software that could be used to cheat on emissions tests. The company said it would set aside 6.5 billion euros ($7.3 billion), which is equivalent to a half a year's profit, to cover the cost of making the cars comply with pollution standards.

CEO Martin Winterkorn apologized that VW betrayed customers' trust and promised that the company would clarify the origin and extent of the issue. He added that everything will be put on the table at this time, as quickly, thoroughly and transparently as possible.

VW's strategy to market their vehicles to upscale professional has backfired and allowed class action lawyers to mobilize quickly. Reason being, the Plaintiffs lawyers do not have to look far for clients because many of their friends and colleagues owned the cars.

The software that allegedly causes Volkswagen cars to cheat official emissions tests exists in only one type of diesel engine, according to the carmaker — and it has sold 11 million of them around the world. The company says it's setting aside 6.5 billion euros (around $7.25 billion) to fix the cars.

EPA officials said the software, dubbed a "defeat device," made about 482,000 Volkswagen diesel-powered cars appear cleaner running than they were.

Volkswagen has revealed that 11 million diesel cars worldwide are equipped with devices that can cheat pollution tests, a dramatic expansion of a scandal that immediately sent its shares plummeting by another 20 per cent.

Michael Horn, chief executive of the Volkswagen Group of America, used the launch of the 2016 Passat to issue an abject apology saying "Our company was dishonest, with the EPA and the California Air Resources board, and with all of you and in my German words, we have totally screwed up."

The lawsuit contends that Volkswagen's decision to prey on environmentally-conscious consumers who paid thousands of dollars for a cleaner-running vehicle is despicable and in violation of multiple state and federal consumer and environmental laws.

Attorney General Eric Schneiderman said Tuesday that his office will join investigations of Volkswagen following reports about how the automaker installed software in diesel-powered cars to cheat emissions tests.

No company should be allowed to evade our environmental laws or promise consumers a fake bill of goods. My office is investigating troubling reports that millions of Volkswagen cars carried software designed to cheat emissions tests

Volkswagen has been cheating on its US government emissions tests for years. And it was a small, independent research institution that caught it.

"Above all, I am stunned that misconduct on such a scale was possible in the Volkswagen Group. As CEO I accept responsibility for the irregularities that have been found in diesel engines and have therefore requested the Supervisory Board to agree on terminating my function as CEO of the Volkswagen Group."

The Executive Committee discussed the manipulation of emissions data and recognizes economic damages as well as loss of trust among customers. Recommendation for new personnel will be presented at Friday's meeting.

Volkswagen CEO Martin Winterkorn stepped down Wednesday over a scandal in which the German carmaker admitted to rigging its diesel cars' emissions to pass U.S. emissions tests

The German Green Party said ministers knew in summer about Volkswagen rigging emissions tests but that 'tricks and deceits' were 'accepted with a wink'.

If these vehicles were driven at the average annual US mileage, the vehicles would have spewed between 10,392 and 41,571 tons of toxic gas into the air each year.

Volkswagen's "clean diesel" vehicles have been responsible for emitting aggravating nitrogen oxide for the last six years.

The authors explore the possible ramifications for UK owners of Volkswagen vehicles.

In April of 2015, Volkswagen of America, Inc. sent letters to California owner of diesel-powered Audis and Volkswagen informing them of an emissions service action" affecting the vehicles.

The company's use of a "defeat device" to skirt emissions testing has rocked both the business world and countless unwitting drivers.

A class-action lawsuit has been filed on behalf of anyone who bought diesel-engine Volkswagens in Iowa.

Attorney General Mark R. Herring announced that Virginia has joined the executive committee of a multistate investigation into Volkswagen for altering emissions software to produce favorable test results.

German government ministers reportedly turned a blind eye to Volkswagen installing cheat devices to fool U.S. diesel emissions tests, raising the possibility that the mushrooming scandal could cause embarrassment for Chancellor Angela Merkel.

All diesel car models in Britain are to be retested amid fears the Volkswagen scandal is an industrywide problem.

The research and development chiefs of Audi and Porsche, Ulrich Hackenberg and Wolfgang Hatz, will be removed by the supervisory board, as will VW's top executive in the United States, Michael
Horn, the senior source said.

After more than a year of stonewalling investigators, Volkswagen stunned two senior officials with the U.S. Environmental Protective Agency and California's environmental watchdog by admitting the automaker hacked its own cars to deceive U.S. regulators about how much their diesel engines pollute.

A $1-billion consumer fraud class action lawsuit has been filed in
Edmonton, Canada against Volkswagen stemming from the admission by the automaker that it sold vehicles that were designed to skirt emissions laws.

The extra pollution from Volkswagen's US cars can be expected to lead to an additional 5 to 27 premature deaths per year. If
extrapolated worldwide to all 11 million vehicles, VW's vehicle would be responsible for causing somewhere between 74 and 404 premature deaths each year.

Volkswagen board is meeting to appoint a new CEO following Martin Winterkorn resignation over the emissions scandal. Mattias Muller is the front runner.

Volkswagen fitted about 11 million cars worldwide (482,000 in the US) with a defeat device that would put the vehicle in a "safe mode" during testing and the engine ran below normal power and performance. Once on the road, the engine switched from this test mode and the engines emitted nitrogen oxide pollutants up to 40 times above what is allowable in the U.S.

Matthias Müller has been appointed CEO of Volkswagen AG with immediate effect. This was decided by the Supervisory Board at its meeting in Wolfsburg today (Friday).

The Supervisory Board of Volkswagen AG approved a new management structure for the Group and the brands as well as for the North America region on 9/25/2015 in Wolfsburg.

The Volkswagen Supervisory Board consulted intensively on the current situation at its meeting today. There is absolutely no excuse for the manipulations which have deeply shocked Volkswagen. The company will leave no stone unturned in getting to the bottom of this, will call those responsible to account, and take the necessary actions.

The internal evaluation revealed that approximately five million Volkswagen Passenger Cars brand vehicles are affected worldwide

The Environmental Protection Agency announced that it will begin road tests of all new vehicle models and vehicles already on the road to examine emissions claims following the exposure of Volkswagen's regulation-cheating scandal.

Volkswagen AG is facing a new round of legal challenges after admitting it cheated on emissions tests for years, with French, German and Swiss lawyers taking action against Europe's largest automaker.

A team of British scientists repeatedly warned the Government that emissions of a deadly pollutant from diesel cars far exceeded official safety levels. The scientists measured emissions from tens of thousands of diesel engine cars as they drove past sensors on roads in tests carried out since 2011.

Switzerland has banned sales of Volkswagen Group cars with outdated emissions systems in the
wake of the test-rigging scandal that started in the United States.

Since 2008, ,VW programed vehicles sold in the U.S. to falsify government emissions tests, which enabled diesel VWs to spew forty times more pollutants than the law allowed.

The cheat software (defeat device) was present in 11 million cars worldwide.

In addition to regulatory enforcement proceedings, the company faces possible criminal action as well as a host of consumer lawsuits. In addition, on September 25, 2015, plaintiff's lawyers filed a securities class lawsuit in the Eastern District of Virginia against VW.

Volkswagen's admission it cheated on emissions testing of its "clean diesel" engines has sullied the automaker's reputation, disrupted the entire industry and put diesel engines on trial in a country that was finally starting to embrace them.

The estimated VW pollution, about 46,000 tons since late 2008, is equivalent of about 4% of the power plant pollution reduction measured, meaning it could be expected to cause an estimated 106 deaths if it had similar effects.

The investigation aims to establish who was responsible and will look at Mr. Winterkorn's role in the worst crisis to hit VW in its 78-year history, according to a statement from prosecutors in Braunschweig, Germany.

Audi has admitted that 2.1 million of its cars sold contain the software designed to cheat emissions tests – 1.42 million are in Western Europe, 577,000 are in Germany, and 13,000 were sold by Audi in the US.

According to the report, Bosch claims to have supplied diesel engine-management software to Volkswagen under the impression that it would be used only in vehicle testing. That software, which was able to activate emissions control devices when a testing environment was detected and deactivate them during normal driving, somehow ended up in production vehicles.

Harris County seized on the outrage of the Volkswagen emissions scandal, saying in a multimillion dollar lawsuit that the German automaker contributed to the region's poor air quality.
Harris County Attorney is suing VW for $100 million dollars under Texas' Health and Safety Codes.

Op-Ed Contributor - The EPA should establish a network of roadside devices that would monitor vehicles more methodically for abnormal emissions.

Ryan is claiming that 6,000 rigged-up diesel cars would have made a difference in the pollution levels of a county with a population of more than 4 million people, most of them drivers.

The county estimated that beginning with the 2009 model year through the end of August 2015, Volkswagen sold more than 6,000 of the manipulated emissions vehicles within the county's borders.

A Volkswagen board member has admitted that
some staff acted criminally over the emissions
cheat tests.

The article indicates that whatever the fix is, there will be a loss of value, there will be degraded performance, the cars will have less efficient gas mileage, and they will still be polluting the environment.

The Executive Committee of the Supervisory Board of Volkswagen AG yesterday (September 30) discussed the current status with respect to the manipulation of diesel engine exhaust emissions.

Harris County filed the lawsuit against the car manufacturer claiming that emissions from 6,000 diesel cars circulating on roadways in the region have caused harm to the population and environment. This may be the first lawsuit filed by a government entity against the
car company since management admitted to falsifying emissions numbers of certain cars released since 2009.

Swiss officials say that new VW cars and newly imported vehicles may not receive registration for road use. According to AMAG, 129,000 vehicles in Switzerland have the software.

Attorneys general from at least 30 states and the District of Columbia are organizing a bipartisan coalition to investigate possibilities of consumer fraud and environmental violations.

The scandal swirling around Germany's largest listed company had its beginnings in an attempt to crack the U.S. market, the missing link in VW's global footprint. But what began as expansion ended in deception.

Volkswagen AG's designated Chairman Hans Dieter Poetsch warned managers that the diesel-emissions scandal could pose "an existence-threatening crisis for the company," as it pleaded for public trust with full-page ads in national newspapers.

Finance officials at embattled car maker Volkswagen AG are evaluating the impact of the company's emissions-cheating scandal on its finances, and assessing options should the crisis take a greater-than-anticipated toll on its €25 billion ($28 billion) cash cushion.

German Chancellor Angela Merkel has called Volkswagen's emissions-rigging scandal a "far-reaching event" and demanded the world's largest automaker quickly investigate it.

Volkswagen's pollution-control chicanery has not just been victimless tinkering, killing between five and 20 people in the United States annually in recent years, according to an Associated Press statistical and computer analysis.

A reduction in car values on Volkswagen AG models after its emissions scandal is the biggest risk to its bonds tied to auto loans, leases and dealerships worldwide.

Volkswagen began installing software devised to cheat on emissions tests in 2008 after realizing that a new diesel engine, developed at great expense, could not meet pollution standards in the United States and other countries.

The crisis has wiped out $34 billion in the company's value as shares have fallen. VW is yet to pinpoint who was responsible for cheating but several engineers admitted to creating the software aimed at cheating the tests.

The article question whether anyone at Volkswagen's Pollution Testing Center was complicit in this scheme.

The cost of its cheating on emissions tests in the U.S. is likely to run into the tens of billions of dollars and prematurely end its long-sought status as the world's biggest carmaker

After the news of the Volkswagen scandal, the mayor of Wolfsburg, Germany said that it was too soon to cite numbers, but announced a municipal hiring freeze and a halt on any new projects, despite the city's current balanced budget.

Volkswagen has admitted that 8 million vehicles were fitted with software capable of cheating diesel emissions tests in the European Union, a German newspaper said on Monday, citing a letter the carmaker sent to members of parliament.

Volkswagen told lawmakers, in a letter signed by VW lobbyists Thomas Steg and Michael Jansen obtained by the Associated Press, that 8 million type EA 189 diesel engines with a 1.2 liter, 1.6 liter, and 2.0 liter engine capacity are affected.

Volkswagen's sneaky violation of clean air standards were carried out by installing in-vehicle software that would make certain Volkswagen models emit lower levels of pollutants while being tested.

Two men (Ulrich Hackenberg and Wolfgang Hatz) who were top aides Martin Winterkorn during his time at Audi and were put in charge of R&D when Winterkorn became CEO are among individuals that the company is centering its efforts around and have been suspended during the investigation.

The news that Volkswagen was deliberately rigging the emissions test of some of its diesel models around the world was curiously caught by the EPA instead of Europe.

Volkswagen installed software designed to cheat on emissions tests in 2008 after realizing that a new diesel engine, developed at great expense, could not meet pollution standards in the United States and other countries.

This is obviously a heroic problem, but ongoing they make terrific products," Schwarzman said. "This will work its way through the legal system in some time. It just will be a very unfortunate time for their securities."

The emission scandal was a deliberate action to violate the law and fraudulently sell cars to customers who thought that they were buying vehicles that met mandated pollution standards.

Tennessee lawmakers will review the state's investment of hundreds of millions in incentives for VW AG's Chattanooga plant and provisions for recouping money if the company's emissions-cheating scandal threatens jobs.

Volkswagen AG was accused in a lawsuit of scheming to defraud investors who paid artificially inflated prices for the company's foreign shares while it cheated on vehicle emissions tests.

Michael Horn, president and chief executive officer of Volkswagen Group of America, will appear before a House Energy and Commerce subcommittee to address Volkswagen's use of defeat devices to cheat on federal emissions tests. The Subcommittee on Oversight and Investigations will hold the first hearing on Oct. 8.

The minority shareholder also signaled it might be open to investing separately in Scania --a Swedish truck maker that was the target of a hostile takeover by VW last year -- should the scandal result in a divestment of the unit.

VW's investigation focuses on two men elevated after Winterkorn was made CEO who found that they couldn't deliver as promised a clean diesel engine for the U.S. market.

There are about 2,684 Volkswagen vehicles registered in the state that have diesel engines with the software to cheat emission tests, according to the complaint filed Friday in Kanawha County Circuit Court.

Volkswagen began installing software designed to cheat on emissions tests in 2008 after realizing that a new diesel engine, developed at great expense, could not meet pollution standards in the United States and other countries, people with knowledge of the automaker's internal inquiry said on Sunday.

VW didn't have time to retrofit the engine with the AdBlue system or to make the changes that would've been necessary to retrofit the system to existing vehicles. It looks as though VW had to choose
between missing the 2009 model year in the United States or cheating on its tests — and chose to cheat.

The complaint, filed Oct. 2, asked the Kanawha County Circuit Court to require Volkswagen to pay at least $43 million in civil penalties and restitution over the sale of its "clean diesel" vehicles, which the company has admitted
Muller announces swift and relentless clarification of emission scandal.

Volkswagen AG CEO Matthias Mueller said the company will delay or cancel non-essential projects as pressure mounts to slash spending in the wake of the diesel-emissions scandal.

While this was an egregious attempt by Volkswagen, history is full of similar scandalous behavior by automakers and in two cases large suppliers to the auto-making industry.

Volkswagen's new CEO has told more than 20,000 workers that overcoming its emissions-rigging scandal will "not happen without pain" and that the company will have to review its investment plans.

The cost of its cheating on emissions tests in the U.S. is likely to run into the tens of billions of dollars and prematurely end its long-sought status as the world's biggest carmaker

Unless VW can come up with a miraculous fix that lets the affected vehicles meet pollution standards without diminishing mileage and performance — fat chance of that happening! — the vehicles' owners will take a financial hit.

Volkswagen and German industry have been rocked by charges that the VW used software to hoodwink regulators about the true emissions of its diesel cars for years. The crisis has wiped out almost 30 billion euros ($34 billion) of the company's value.

Volkswagen's decision to nominate a long-serving executive as chairman has once more highlighted the carmaker's corporate governance and culture, which some experts argue were a root cause of the diesel-emissions scandal.

Instead of rising to the difficult task of developing new technology to meet emission standards, Volkswagen cheated. It built a device that could detect when the car was being tested for emissions standards, and would temporarily change performance to pass the test.

Several engineers stated that they installed deception software in 2008 according to Bild newspaper. Bild did not reveal their identifies, but indicated that their statements had so far failed to unmask those who masterminded the scam.

Mueller told a German newspaper that it would take a year to fix all 11 million diesel vehicles world wide which contain emissions-cheating software.

Manipulations of emissions readings in diesel cars came from Volkswagen's headquarters in Wolfsburg, Germany, not the United States, Volkswagen CEO Matthias Mueller said Tuesday.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime."

Volkswagen of America CEO Michael Horn is scheduled to testify Thursday before a U.S. House subcommittee investigating last month's admission the company had installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars starting with the 2009 model year.

Texas Attorney General Ken Paxton today filed a lawsuit against Volkswagen Group of America, Inc. and Audi of America, LLC over violations of state consumer protection laws, along with a separate suit charging that the companies violated clean air standards in Texas.

The state's claims, in two lawsuits by Texas Attorney General Ken Paxton in state court in Austin, follow similar actions brought by West Virginia on Friday and a separate case by the county that encompasses Houston.

CEO of VW of America testified before the House Energy and Commerce subcommittee that he first learned about the potential problems with VW's diesel emissions in early 2014 and blames the installation of a defeat device on a couple of software engineers.

State prosecutors and police searched Volkswagen's offices in the Wolfsburg in a bid to secure documents and databases that could shed light on which employees were responsible for cheating pollution tests.

Lawmakers slammed an Environmental Protection Agency official who testified after Horn for not catching Volkswagen. Representative Michael Burgess, a Texas Republican, questioned the size of EPA's annual budget, noting that the cheating was uncovered by a West Virginia University study that had a budget of less than $70,000.

Police swooped on Volkswagen's headquarters carrying away files and hard disks as the investigation into the massive pollution cheating scandal expanded. Head of VW Group of America said that he believed a couple of software engineers were responsible for the software that allowed nearly a half million diesel powered cars to be sold in the US since 2008.

With nearly a half-million cars driving an average of 11,000 miles per year for nearly seven years, that could amount to anywhere from about 14,000 to 59,000 tons of additional nitrogen oxides.

Mercedes-Benz, Honda, Mazda and Mitsubishi have joined the growing list of manufacturers whose diesel cars are known to emit significantly more pollution on the road than in regulatory tests.

The city of Dallas said in a prepared statement Friday that it will not follow through on plans announced earlier this week to sue Volkswagen over possible emissions violations. The statement said the city was prepared to file the suit Thursday but shifted gears after learning that the state of Texas had already filed suit against the German automaker over alleged violations of air quality standards.

California has given carmaker Volkswagen until November 20 to come up with a plan to fix the diesel cars affected by its rigging of emissions tests. The CARB spokesman said the deadline represents 45 business days from an in-use compliance letter sent to Volkswagen dated Sept. 18.

Volkswagen's diesels don't appear to have been dented nearly as much on secondary markets, where owners sell used cars directly. Carlypso, a California based car-shopping startup, reported a price drop of .3 percent. That's right-all the hue and cry about a sinister plot to cheat emissions tests sent prices plunging by about $30.

Volkswagen could compensate owners of diesel-powered cars that emit high levels of pollutants, possibly by paying them for the lost value of their vehicles, the company's top U.S. executive said. Speaking to lawmakers investigating the emissions cheating, U.S. CEO Michael Horn said fixing most of the 500,000 affected cars in the United States could take one to two years, possibly more.

U.S. Sen. Charles Schumer says the federal government should seek the maximum possible fine from Volkswagen and demand that the automaker give rebates to buyers following the recent scandal over emissions testing

The EPA is investigating a second emissions-control software program in Volkswagen cars that were rigged to pass pollution tests, one that the automaker may have failed to properly disclose. The computer program is on the EA 189 diesel engines used since 2009 that are also fitted with software that the automaker has admitted was designed to fool emissions tests, according to a person familiar with the matter who asked not to be named because the information is private.

The diesel emissions scandal is going to be very expensive for Volkswagen. While the final figures will not be available for months, if not years, the estimated costs could be $25 billion if you make the calculations.

California owners of Volkswagen diesel vehicles affected by the emissions cheating scandal are demanding the company buy back their cars immediately, according to a new class action lawsuit filed against the German automaker Monday in federal district court in Santa Ana.

VW is recalling 1,950 diesel vehicles in China to change engine software it has admitted cheats on emissions tests and Singapore suspended sales of the company's diesel cars.

Following in the footsteps of Harris County and the city of Dallas, the state announced it is suing Volkswagen in connection with the German automaker's admitted use of software that allowed its vehicles to circumvent emissions limits.

The European Investment Bank is looking into loans made to Volkswagen AG to help fund the development of cleaner engines in light of the emissions scandal, EIB chief Werner Hoyer said. Volkswagen's cheating on diesel emissions is a "great shock" and must be analyzed since it threatens to hurt the climate credentials of the development bank.

S&P lowered the Wolfsburg-based company's rating on long- term debt to A-, the fourth-lowest investment grade, from A, and said another cut of as much as two notches is possible.

Volkswagen owners based in Arkansas, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas who are affected by this recall can seek legal counsel from seasoned product liability attorneys practicing at Sloan, Bagley, Hatcher & Perry Law Firm. The firm's website is: http://www.volkswagenemissionsscandal.com

A staffing company for Volkswagen's Chattanooga assembly plant said Monday the automaker has indicated it's "business as usual" for now in the wake of the emissions-rigging scandal. Lucas Hiler of VW contractor Aerotek said it's "maintaining the headcount" of about 200 workers who were hired this summer in connection with the $900 million expansion underway at the factory.

Janet McCabe said the agency is “upping our game” following VW’s admission last month that it cheated on emissions tests for more than 11 million diesel cars worldwide. The EPA will conduct more spot checks of light-duty cars and trucks, testing vehicles owned by individuals and rental companies in real-world driving conditions.

Last year VW ranked third in the semi-regular report card. Reports concerning VW's diesel vehicles is not only a black eye on the company, but it also calls into question how queen the VW fleet truly is.

Paramount Pictures and Leonardo DiCaprio’s production company Appian Way have optioned the rights to a book proposal from New York Times journalist Jack Ewing about the ongoing debacle.

Volkswagen-backed Bundesliga club Wolfsburg postponed the construction of a youth training center Tuesday because of the German car manufacturer’s emissions-rigging scandal.

Volkswagen's flagship brand plans to change its diesel technology in Europe and North America as well as develop new hybrid and electric vehicles in response to its emissions scandal.

VW's cooperation with investigators will be the true measure of how it will be treated by the Justice Department in its criminal investigation. And on that front, there is reason to question just how cooperative Volkswagen will be as it faces scrutiny that now includes a second computer program that affected how emission controls operated in its cars.

The 2016 models have not been certified for sale by the U.S. Environmental Protection Agency.

Volkswagen announced that it would revamp the technology it uses for controlling diesel exhaust in future models as it struggles to overcome an emissions cheating scandal that has battered its reputation and threatened its financial stability.

Volkswagen AG will reduce annual investment by about 1 billion euros ($1.1 billion) at its namesake car brand as the automaker steps up a cost-cutting push to weather the impact of the diesel-emissions scandal.

Volkswagen announced that it will cut investment at its biggest division by 1 billion euros and will overhaul the model strategy at its
core VW division, giving a greater focus to electric and hybrid vehicles.

The Volkswagen scandal is putting new pressure on European policy makers to roll out tougher vehicle-testing standards that measure emissions based on how cars are actually driven, not how they perform in a lab. It is also reinforcing plans by some European cities to restrict diesel vehicles from their streets, a blow to the European auto industry's huge investments in diesel technology.

VW announced that they will switch to a different technology for treating diesel emissions in Europe and North America "as soon as possible" and that VW cars "will only be equipped with exhaust emissions systems that use the best environmental technology."

The newly-formed Volkswagen Brand Board of Management took further strategic decisions at a special meeting. CEO Dr. Herbert Diess announced major product decisions: a reorientation of the diesel strategy with the most advanced technologies, the development of a standardized electric architecture for passenger cars and light commercial vehicles, and a new approach for the next generation of the Phaeton.

The author contends that the diesel industry as a whole is a potential victim of VW's scandal and questions whether the scandal will taint the proven benefits of clean diesel technology.

Following revelations that Volkswagen cheated on emissions tests, the automaker is anticipating a decline in sales. VW is also cutting production and freezing hiring.

Sens said that Volkswagen AG should repay more than $200 million in ill-gotten tax credits over its alleged use of software to cheat emissions testing and urged the U.S. Environmental Protection Agency to set the maximum possible fine.

Toyota Motor Corp announced that it is targeting a 90% reduction in emissions from its new vehicles by 2050. The chairman also said that Volkswagen's rigging of diesel engines with software has damaged trust in the industry.

Volkswagen announced that it will cut investment plans at its biggest division by $1.1 billion a year and step up development of electric vehicles as it battles to cope with the fallout from its cheating of diesel emissions tests.

Volkswagen AG said that Vahland decided to leave because of conflicting ideas about the structuring of the division and explicitly said that his resignation isn't connected to the emissions testing scandal embroiling the company. Vahland had been appointed at the same time Matthias Muller took the German automaker's reins after its previous CEO stepped down last month.

Volkswagen division head Herbert Diess announced that the company would adopt selective catalytic converter technology, which is a system that injects the chemical substance urea into the exhaust stream to neutralize harmful nitrogen oxides.

US regulators contend that they have a lot more questions for Volkswagen, which was triggered by the company's recent disclosure of additional suspect engineering of 2016 diesel models that potentially would help exhaust systems run cleaner during government tests.

In six separate petitions all filed in state court in Dallas, plaintiffs including Mark Azam, Placido Ballariano and nearly 100 others made nearly identical claims arising from the U.S. Environmental Protection Agency's announcement last month that certain Volkswagen AG diesel models were fitted with a so-called "defeat device" software.

At least 30 managers were involved in Volkswagen's emissions test cheating, German magazine Spiegel reported. Spiegel, citing preliminary results of probes by law firm Jones Day and Volkswagen itself, said the dozens of managers would be suspended.

Volkswagen has exposed the deep conflicts in the world of European emissions testing, where car manufacturers hire outside firms to certify their pollution controls in laboratories. Not only is TÜV Nord at the forefront of finding a new testing regimen for automakers, but it is also the company that signed off on VW's emissions tests in Europe.

At the present time, New Yorkers who own affected Volkswagens will not be prevented from driving their cars," Department of Motor Vehicles spokesman Joe Morrissey told the Democrat and Chronicle

Volkswagen has used two basic types of technology to reduce emissions of nitrogen oxides from diesel engines, by either trapping the pollutants or treating them with urea.

Paul Willis, managing direct of VW UK, claims that the company's cars have not emitted any more toxic nitrogen oxides than expected, despite the use of cheat devices which drastically reduced
pollution emissions in official tests.

Volkswagen deserves to suffer "substantial damage" because of the diesel emissions scandal that has rocked the carmaker and affected 11m vehicles worldwide, the British transport secretary has told MPs.

Italian authorities have searched the headquarters of Volkswagen Italia as part of a local investigation into the emissions testing scandal at the German automaker. Volkswagen bought a full-page advertisement in Turin daily La Stampa on Tuesday apologizing for the "grave error" and promising to do everything to win back the trust of Italians.

Regulators say they have more questions for Volkswagen, triggered by the company's recent disclosure of additional suspect software in 2016 diesel models that potentially would help exhaust systems run cleaner during government tests. The delay means that thousands of 2016 Beetles, Golfs and Jettas will remain quarantined in U.S. ports until a fix can be developed, approved and implemented.

A lot of this could have been avoided with a carbon tax. A carbon tax would not help reduce local air pollutants such as NOx so it would not replace all auto pollution regulations. But it could supplant those that aim to reduce carbon emissions from vehicles.

Volkswagen AG to conduct a mandatory recall of diesel models installed with software that cheats emission tests. Winfried Vahland, the chief executive of the auto maker's Skoda Auto business and CEO-designate of a new organization that would group its U.S., Canadian and Mexican operations, resigned abruptly.

German authorities on Thursday ordered a recall of all Volkswagen cars fitted with emissions test-cheating software, a decision that will affect 8.5 million VW diesel vehicles across the 28-nation European Union.

The move reflects the difficulty that Volkswagen faces in fixing the 11 million vehicles worldwide that contain a so-called defeat device, which effectively lowered emissions for testing purposes. The company is indicating that the repairs may stretch beyond the end of 2016.

The U.S. attorney's office in Detroit and the Justice Department's Fraud Section joined a sweeping federal probe of Volkswagen AG over emissions-test cheating signaling the government's intent to cast a broad net and explore numerous paths to a possible criminal case. The involvement of the U.S. attorney in Detroit, Barbara McQuade, signals her office may take a key role in what is expected to be a major case.

Research suggests there may have been hints of the still unfolding diesel emissions scandal at Volkswagen AG hidden in corporate sustainability reports.

Volkswagen has announced that they've hired Christine Hohmann-Dennhardt as an executive on its top management body tasked with integrity and legal affairs. Hohmann-Dennhardt begins on January 1 and has served as a judge on Germany's Federal Constitutional Court and as justice minister.

The VW Group brands grew deliveries by 3.5 percent on the overall European market in the first three quarters, handing over a total of 3.07 million vehicles to customers. Between January 2015 to September 2015, 453,500 delivers were made to customers in the United States, which is a 3.2% increase over last year.

The scandal around Volkswagen AG won't have a direct impact on trade talks between the European Union and the U.S., though it's bad for the company's trustworthiness, EU Trade Commissioner Cecilia Malmstrom said

Prosecutors investigating Volkswagen's use of emissions test-cheating software in some of its diesel engines say they're putting together a group of about 20 investigators to evaluate the massive amount of data seized from the car manufacturer.

Volkswagen saw its market share in Europe drop fractionally in September, when its emissions scandal broke mid-month, as its sales growth lagged the wider market. However, VW Group sales, comprising all VW brands including its luxury marquees, rose by 8.4 percent in the European Union.

The European carmaker's association ACEA said Friday that sales of VW brand cars in the EU rose by 6.6 percent, while the group's overall sales, also including other brands, were up 8.4 percent.

Even after quitting as chief executive of the carmaker on Sept. 23, Winterkorn continued to hold the title of chief executive of Porsche Automobile Holding SE, which owns more than half of Volkswagen's voting shares. Winterkorn will resign as chief executive of the company that holds a majority of Volkswagen shares, which will end his formal influence over the carmaker.

French authorities have searched the headquarters of Volkswagen France as part of a local investigation into the emissions testing scandal and seized computer equipment.

Even as Volkswagen embarks on the task of fixing the emissions systems it disabled on almost 500,000 of its diesel vehicles in the United States, the automaker faces another hurdle: persuading owners to make the repair at all. So for owners, the prospect of having a car's emissions cleaned up, only to have the car perform worse — whatever the pollution — is not sitting well

Gary Bishop and Donald Stedman of the University of Denver, cited test data from California and Colorado showing that, beginning in 2008 and through 2014, emissions from passenger cars with 2.0-liter class diesel engines were significantly higher than allowed by USEPA Tier 2 emissions standards.

Pricing starts at $22,440 for the 1.8T S model with automatic transmission. At the top, the 1.8T range, the SEL Premium starts at $34,270.

VW issued a voluntary safety recall affecting the Passenger Occupant Detection System (PODS) control module on certain 2015 model year Volkswagen e-Golf, Golf and Jetta vehicles.

Volkswagen's betrayal ripples on: Lane relied on Green Car Journal, which, in making its now-rescinded award, relied on data from the Environmental Protection Agency, which, in turn, relied on the honesty of Volkswagen. That trust has been broken.

Volkswagen AG may have to consider an overhaul of a 12-brand empire built in the last two decades that makes everything from cheap cars to motorbikes to heavy trucks.

Frank Tuch, Volkswagen's head of quality control, is the fifth high-ranking executive to be suspended in connection with revelations that 11 million Volkswagen vehicles were equipped with software designed to trick emissions tests

Volkswagen said 2.6 billion euros ($3 billion) of loans or leases for vehicles built with engines using emissions=cheating software were packaged into asset-backed securities. The loans were found in 15 securitizations.

Volkswagen's employee council and Germany's biggest industrial union are demanding "transparency at all levels" of the company following the emissions-rigging scandal.

With billions of dollars at stake in restitution and penalties,
U.S. states are moving quickly to try to hold Volkswagen accountable for its emissions cheating scandal. But, "[u]ntil the criminal case clears, nobody is going to talk civil. Volkswagen will not settlement until the criminal investigations are resolved," said James Tierney.

Over two thirds of German consumers (65 percent) believe that the embattled German carmaker still builds "outstanding" cars and that the emissions scandal was overdone. 63 percent either agreed or strongly agreed that the emissions scandal would be forgotten and, within a year, no one would be discussing the affair surrounding the rigged diesel engines

Police raided two Volkswagen offices near Paris. Volkswagen officials have confirmed the raids and said that they are cooperating with French officials to uncover the truth behind the worsening scandal surrounding emissions-test-cheating software installed on a range of Volkswagen's diesel vehicles.

The German state of Lower Saxony has filed a criminal complaint after discovering that a file on scandal-hit Volkswagen had disappeared. A spokeswoman for the state government says the file, which included internal government memos on the emissions

Volkswagen AG's "dieselgate" isn't the only scandal involving the German automaker, as the company's major shareholder, Porsche SE, and its two former executives face a trial on market manipulation charges. When VW managers called for clean diesel without the urea system, "they must have known that it's impossible, or else it's not possible they have degrees as engineers," Dudenhöffer says.

It's not credible that top managers were unaware corners had been cut, says Dudenhöffer, who worked at Porsche and other carmakers before entering academia. VW is a company where the engineers are in charge.

VW ordered a halt to sales in Europe of all models that feature diesel engines equipped with defeat devices meant to falsify emissions compliance, the latest in a global scandal expected to cost the German automaker billions of dollars. Volkswagen told Reuters that this stop-sale only affects a small number of vehicles, and those cars would be sold once fixed.

Volkswagen may have to set aside more than the 6.5 billion euros ($7.4 billion) it has so far allocated to cover the costs of an emissions scandal if car sales suffer.

Norwegian shipowner I.M. Skaugen has disclosed it is seeking $50 million in compensation from a marine unit of Volkswagen for rigging performance tests of ship engines produced over a decade ago. I.M. Skaugen sees similarities between MAN's handling of the ship engine tests under VW ownership and the German company's response to the biggest scandal in its 78-year history

Volkswagen said it was investigating whether some versions of another diesel motor line, known as the EA 288, also had software intended to detect when a vehicle was undergoing emissions testing and turn on pollution controls. The EA 288 was installed in cars sold in the United States.

The news follows a slow drip of circumstantial evidence suggesting that its doctoring of emissions data involved more people and more cars than previously admitted. If substantiated, that could lead to VW facing far larger fines and criminal penalties than reckoned with so far.

The automaker asked a panel of federal judges to combine the more than 350 lawsuits against it in federal court in Alexandria, Va., a venue known for moving cases quickly and also the one closest to its U.S. headquarters in Herndon. Volkswagen listed Detroit as an alternate choice, while opposing requests by some car owners' lawyers to send the case to California.

Volkswagen AG said its current-generation diesel engine doesn't have software designed to cheat on emissions tests, meaning its global recall of as many as 11 million cars won't need to be even bigger. "After a thorough review it is now clear" that the offending software isn't installed in vehicles with EA 288 motors built under previous Euro-5 standards, Volkswagen said.

VW plans to recall 17,057 Amarok pickup trucks sold in Brazil to correct software allowing the vehicles to cheat on emissions tests. The recall affects Amaroks with 2.0-liter diesel engines built in Argentina during model year 2011 and part of 2012.

The German carmaker will need to install parts for vehicles already on the road that weren't designed to accommodate the equipment. The work may need to be done in special shops set up for the purpose. And it will have to pass muster with dozens of countries with their own regulations.

The strategy focuses on positioning the Volkswagen Group as a global economic and environmental leader among automobile manufacturers.

Subject: Confidential - EU NGOs to announce another diesel car with excessive real world emissions

Chris, Alberto, Byron, Jim and Mike
This is a heads up that a group of European NGOs are expected to announce later today that they have found another European diesel passenger car with excessive NOx emissions during non-type approval testing.

The vehicle is an Opel Zafira 1.6 liter diesel engine. The emissions were 17 times higher on a 4 wheel dyno than on a 2 wheel test. Also, when they turned off the urea injector for the NOx control system the engine still started (which it's not supposed to do in Europe) and the on-board diagnostics light did NOT turn on (which is supposed to happen).

The NGOs aren't calling it a defeat device - wisely. Instead, they're saying it has "very strange emissions" and that the government should look into it.

The press conference is at 10am Berlin time, Friday, October 23. This info is embargoed until then.

You may get press calls. I know that we have already been getting press calls.

Subject: RE: Confidential - EU NGOs to announce another diesel car with excessive real world emissions

Thanks Drew.

Saw some of Axel's quotes today and wondered what was coming. To confirm, this is a front wheel drive vehicle that when tested with the rear wheels stationary has 17x emissions compared to testing when the rear wheels turns synchronous with the front? Or, is this an AWD vehicle that has lower emissions when one set of wheels is disabled in order to run an emissions test?

Based on what I am finding quickly online I am assuming this is exclusively a fwd product and the vehicle only has compliant emissions when the rear wheels are stationary. Is that correct? If so, very strange emissions sounds like the understatement of the year.

Thanks very much for the heads up and what looks like more great work. When you are back stateside, I would like to catch up on your takeaways from the workshop.

Thanks,

Byron

Car emissions testing: 'The whole system is corrupt'

EUObserver (BRUSSELS, 21. OCT) - Volkswagen is not the only car company that used illegal devices to cheat emissions tests, said Axel Friedrich, a German emissions testing expert who is a co-founder of the NGO that notified US authorities something was wrong with VW's test results. "You will see tomorrow night on German television the next case", Friedrich said on Wednesday (21 October) in the European Parliament.

"It's not only diesel, it's also gasoline. The whole system is corrupt", he added.

Although he refused to single out companies, he noted that he "heard a number of statements [from other car companies] which I know are lies. We'll realise this in the next couple of weeks."

According to Friedrich, it was already well-known to those involved that car companies must have been cheating during the laboratory tests.

But Volkswagen "tried to keep it secret. This is when journalists get more interested. If it's open, nobody cares. If it's secret, you jump on it", he told a group of around twenty journalists during a round-table discussion organised by the parliament's left-wing Green group.

But the signs were there. While the cars did well on the laboratory tests, air quality in Europe's cities did not improve in tandem.

More than half of the EU's member states are currently facing infringement procedures from the European Commission for failing to comply with EU targets on air quality.

"If the car [industry] would not [have been] cheating, we would have met all these goals of the air quality directive", said Friedrich.

The German retiree is former director of the Environment, Transport and Noise Division of the German federal environmental agency, but recently became a regular voice in German media after the Volkswagen scandal involving illegal software which allowed VW's cars to appear much cleaner than they actually were.

The scandal was exposed after US authorities investigated claims from the International Council on Clean Transportation, an NGO of which Friedrich was one of the founders.

Friedrich praised the US Environmental Protection Agency (EPA) which carries out random checks even after cars are certified.

Industry lobby

"We have 28 European agencies for certification. They compete. We have more than 50 certification test labs. They compete. And nobody controls them. … We make laws, but no enforcement. We have big industries which lobby heavily to avoid these controls."

Under EU rules that came into force in 2007, member states should have had by 2009 "effective, proportionate and dissuasive" penalties in place for the use of defeat devices.

"It's 2015, can somebody name me one member state that has done this? I don't know one", said Friedrich.

A Commission spokesperson told this website that all 28 EU countries have told the Commission that they transposed the relevant directive.

"This information suggests that they have implemented a system of penalties, although many Member States have not communicated their national rules to the Commission separately", the spokesperson said.

She did not want to comment on whether the Commission has started infringement procedures against those countries, but did stress the Commission is "following national authorities' policing and enforcement of EU rules in the automobile sector very closely".

Real driving

Friedrich proposes scrapping laboratory tests altogether, and only having random surprise checks under real driving conditions.

"We spend billions per year on tests in a lab. Useless. … We want to clean up the environment, not the labs", he noted.

The Commission has introduced a new test called the Real Driving Emission (RDE) test, the final elements of which are currently being negotiated.

In a written response to questions from MEPs during a heated plenary debate earlier in October, industry commissioner Elzbieta Bienkowska wrote that the RDE test procedures "will be an appropriate answer to the shortcomings of laboratory testing and will considerably reduce the risk of defeat devices being used".

However, Friedrich does not share this assessment, saying that industry is doing its utmost to ensure that this 'real drive' test does not replicate real driving conditions.

He noted that the conditions during which RDE tests will be taken, are not average driving conditions and exclude, for example, a car motor standing idle for a while (as would be the case in a traffic jam).

Coming up in plenary

The European Parliament, meanwhile, is working on a text to adopt next week during its plenary session in Strasbourg. The MEPs will vote to decide whether they want the Commission to launch an investigation, or failing that, a parliamentary investigation. A call for an independent EU agency that oversees emissions compliance is also proposed.

The Commission has repeatedly stated that it does not have the power to investigate the scandal.

Dutch Green MEP Bas Eickhout says that while strictly legally speaking that may be true, there are "plenty angles" which the Commission could use, such as a state aid probe.

"The EU also does not have power over taxation, yet it still investigated tax rulings via a state aid case."

EPA has sent for White House pre-publication review its proposed rule assessing the costs of regulating power plants with maximum achievable control technology (MACT) air toxics standards, responding quickly to the Supreme Court ruling that faulted the agency for not weighing costs when it first decided to craft the utility MACT.

Greenwire

CLEAN POWER PLAN:

It's showtime for legal and Hill battles

Jean Chemnick and Robin Bravender, E&E reporters

Published: Thursday, October 22, 2015

This story was updated at 2 p.m. EDT.

An epic legal battle surrounding the Obama administration's signature climate change rule formally kicks off tomorrow.

U.S. EPA is set to publish its Clean Power Plan -- a rule to crack down on power plants' greenhouse gas emissions -- in the *Federal Register*. The bureaucratic move will trigger a flurry of lawsuits and launch what promises to be a lengthy war in the courts over the Obama administration's regulation.

"Well, it's finally here," environmental attorney David Doniger said today. "You've seen the trailer -- and maybe this is not as highly awaited as the new 'Star Wars' movie -- but the Clean Power Plan will be published tomorrow."

A raft of legal challenges are expected from states and industry groups that have publicly denounced the regulation. And Republicans on Capitol Hill will roll out Congressional Review Act resolutions targeting the Clean Power Plan and a rule for new units that will be published alongside it tomorrow. But although it may take years for the rule to work its way through the courts -- ending with a likely decision by the Supreme Court -- congressional efforts are expected to end with a presidential veto if they clear both chambers.

Lawyers on both sides of the issue have been eagerly awaiting the rule's formal publication, which will precede a 60-day window for opponents to sue in federal appeals court.

States and industry litigants are expected to challenge the final existing power plant rule on many of the same grounds they previewed in lawsuits to stop last year's draft version (*E&E Daily*, Oct. 19). Critics are expected to ask the U.S. Court of Appeals for the District of Columbia Circuit to block the rule, arguing they'll be harmed by its implementation. EPA and its allies, meanwhile, say they're confident the rule will stand up to legal scrutiny.

Among the lawsuits expected to pile in tomorrow will be one from West Virginia, one of the states leading the charge against EPA's regulations.

"The President's illegal rule will have devastating impacts on West Virginia families, and families across the country," state Attorney General Patrick Morrisey (R) said today in a statement. "West Virginia, working with a large bipartisan coalition of other States, will be filing suit and seeking a stay of the rule promptly tomorrow."

EPA's foes are "promising to line up at the U.S. Court of Appeals in Washington tomorrow to file their

lawsuits," Doniger said. "They will try to impress you with the number of lawsuits and with hot rhetoric about supposedly dire impacts." On EPA's side, he said, "the Clean Power Plan will have a powerful army of defenders as well, in this court battle."

Earlier this year, the D.C. Circuit dismissed an attempt by more than a dozen states, energy companies and industry groups to block EPA from finalizing its greenhouse gas standards for power plants. In an unusual move, EPA's challengers asked the judges to halt the rule before it was finished, arguing it will have a significant economic impact and questioning whether EPA has the authority under the Clean Air Act to issue it. The court said the challengers had to wait until the rule was final (*Greenwire*, June 9).

Speaking on a call this morning with reporters, EPA acting air chief Janet McCabe said the agency was focused on helping the states implement the rule, not on efforts to undo it.

"We know these processes are out there and people will engage in them," she said on the call.

But she reiterated that she was confident the rule was on firm legal footing -- a foundation that is painstakingly articulated in the 1,560-page final rule.

"So I am confident that we will continue to make progress and to show leadership on this issue, here at home and internationally," McCabe said.

McCabe and her staff have kept up a busy travel schedule since the rule was finalized to help states begin laying the groundwork for implementation. EPA staffers find themselves fielding ever more specific questions from states ahead of next year's deadline for an initial submittal toward a state implementation plan, she said. And few states are not planning.

"States generally prefer to be in the driver's seat themselves and develop their own Clean Air Act plans, and that's what I'm hearing," she said.

McCabe told a conference hosted by the Environmental Council of the States in Washington, D.C., yesterday that EPA would be as involved or not involved as states preferred as they prepare their implementation plans -- which are ultimately due by 2018.

"We are off and running about the business of implementing the Clean Power Plan," she told the ballroom full of environmental regulators. "And we will be there with you every step of the way unless you don't want us there with you on some of those steps."

Tomorrow's publication begins the 90-day public comment period for EPA's proposed model plans for states and its draft federal implementation plan. The former is intended to guide states as they craft their own plans or to act as a ready-made option, but the latter shows how EPA would enforce curbs on power plants in states that opt not to comply. EPA will also take comment on the voluntary Clean Energy Incentive Program it included in its final version of the rule for early action, and EPA announced yesterday that it planned to hold meetings with stakeholder groups to discuss the program.

Capitol Hill challenges

Republicans on Capitol Hill have their own plans to challenge the rule. Senate Majority Leader Mitch McConnell (R-Ky.) is taking the lead in the Senate in offering two CRA resolutions to scuttle the new and existing power plant rules. His office said today that those would be unveiled next week in a joint rollout with Sen. Shelley Moore Capito (R-W.Va.).

Capito said today that she still expects action on her bill to allow states to opt out of the existing rule and to scrap the rule for new sources. But the CRA motions will probably come to the floor sooner, she said.

"So two tracks, I think. And try to fight it that way," she said.

Rep. Ed Whitfield (R-Ky.) has said he, too, plans to offer CRA resolutions in the House.

While these efforts will not overcome President Obama's veto, Republicans hope they will embarrass the administration as it sends negotiators to Paris next month in hopes of hammering out an international emissions deal. The U.S. submission to the United Nations process depends heavily on the power plant rules to deliver reductions over the coming years, and GOP members say the world should know that the rule is unlikely to survive.

But a senior administration official told reporters yesterday that the rule tracks with trends already happening in the U.S. power sector and therefore is likely to stand the test of time.

"So I think that we feel quite confident that we can make the case that without new law, without new authorities, and based on pretty well-established regulatory approaches, the United States is well on the trajectory to get to those goals," the official said.

Reporters Geof Koss and Kevin Bogardus contributed.

AIR POLLUTION:

State regulators stressed by EPA initiatives, budget woes

Amanda Reilly, E&E reporter

Published: Thursday, October 22, 2015

A growing list of complicated federal air regulations combined with funding shortfalls is complicating the work of state regulators.

Of most concern are U.S. EPA's Clean Power Plan for greenhouse gases and a toughened national ozone standard, which both force states to write plans for slashing emissions.

But state agencies and EPA are exploring new multipollutant strategies, a departure from the historical way of addressing Clean Air Act issues one pollutant at a time. Meanwhile, states are forming partnerships to make up for cash shortfalls.

"You can take this as gloom and doom or as some really good opportunities," Craig Butler, director of the Ohio Environmental Protection Agency, told a gathering of air regulators yesterday at the Environmental Council of the States in Washington, D.C.

In Ohio in the mid-1990s, the state EPA had more than 1,400 staffers, Butler said, but it's now down to just over 1,100. Of total staff, 200 full-time employees are dedicated to regulating air pollution from 14,000 sources across the state.

"We got really skinny, to the point where it was somewhat of a joke to the Cabinet: Yes, we've cut through the fat, we've gone through the muscle and we're scraping on the bone," he said.

Butler described regulations from the federal EPA as putting both deadline and financial pressures on the shrinking staff dedicated to air pollution. Ohio has not decided yet whether it will write a plan to comply

with the Clean Power Plan, according to Butler, but is working on comments on EPA's draft federal implementation plan.

Todd Parfitt, director of the Wyoming Department of Environmental Quality, also said his state is enduring financial strain. Wyoming has had a budget crunch due to a decrease in the cost of commodities, he said. And with the economy on the uptick, it's been difficult to attract high-quality staff to the agency.

"We see a lot of natural resource development, and we compete with industry for the same staff, high-quality staff," he said.

The result is a backlog in state implementation plans, which leads to litigation and more pressures on the staff, he said.

Along with the Clean Power Plan and ozone standard, Arkansas is waiting on a number of approvals from EPA on state-submitted plans to comply with more conventional air pollutant regulations, according to Becky Keogh, director of the Arkansas Department of Environmental Quality. Those plans will likely need updates.

"Some of those have gone somewhat stale as they sit on the plate," she said. "In some cases, we're looking for ways to refresh or supersede those actions where they are no longer relevant to our current work."

Keogh suggested Arkansas was being forced to take on the work despite having relatively clean air.

"We also look forward to a day in Arkansas -- perhaps a bit through rose-colored glasses -- to where a state with as good of air quality as we do in Arkansas doesn't need to dedicate over 30 percent of our agency resources to meet air statutory obligations," she said.

Regulators pointed to a bright spot: new partnerships among state agencies, particularly with energy departments.

Air regulators also said they were increasingly looking for ways to address multiple pollutants at the same time.

The Clean Air Act has historically worked through the promulgation of standards for individual pollutants and source categories.

"With the Clean Power Plan, ozone, the others -- it does provide an opportunity to think about the strategies that serve all of the goals at the same time," said Jared Snyder, assistant commissioner for air resources, climate change and energy at the New York Department of Environmental Conservation.

"It may not be a single multipollutant plan. We're not at that point yet. Maybe we'll get to that point over the years to come. But we can think about strategies that will help us attain all of those various goals that are out there right now."

U.S. EPA, he added, is becoming more amenable to this approach as air standards reach lower and lower levels.

Dick Pedersen, director of the Oregon Department of Environmental Quality, said his state was holding conversations with the EPA Region 10 office on shaping multipollutant plans by focusing on overall air quality goals.

"Let's focus on those outcomes and work together and less on the process to get there," he said. "There's

a lot of conversation had around that."

NUCLEAR:

NRC grants 1st operating license in 20 years

Ben Panko, E&E reporter

Published: Thursday, October 22, 2015

The Nuclear Regulatory Commission today granted Tennessee's Watts Bar Nuclear Generating Station a 40-year operating license for its Unit 2 reactor, the first one issued by the agency since 1996.

"This is a big day for the people of the Tennessee Valley and for the people of the entire United States," said Bill Johnson, head of the Tennessee Valley Authority, which owns Watts Bar. "This unit will provide low-cost energy now and for decades to come."

Construction on a second nuclear reactor at Watts Bar in eastern Tennessee began in 1973 but was halted in 1988 due to declining power demands in the area. Construction was restarted on Unit 2 in 2007 (*EnergyWire*, May 4).

"After devoting more than 200,000 hours over eight years conducting extensive safety reviews and inspections, we're satisfied Unit 2 is safe to operate," said Bill Dean, director of NRC's Office of Nuclear Reactor Regulation, in a statement.

TVA will conduct several more weeks of testing before it loads Unit 2 with fuel and will then do extensive testing on it over several months before the reactor starts regular operations, said Mike Skaggs, senior vice president of Watts Bar Operations and Construction. The reactor is in full compliance with new NRC regulations implemented after the 2011 Fukushima Daiichi disaster in Japan, he said.

"This reactor will be just as safe as every reactor that went online before," said Joe Grimes, TVA's chief nuclear officer.

Watts Bar's two units will produce a total of 2,300 megawatts, Johnson said, enough to power 1.3 million homes. The addition of Unit 2 will allow TVA to avoid emitting 6 million to 8 million tons of coal carbon emissions annually, according to Bechtel Corp., the construction company that built the reactor.

"Watts Bar will really help Tennessee manage its emissions under the rules of the Clean Power Plan and will contribute to cleaner air for everyone who lives and works in the area," said Ericka Reyes, a spokeswoman for the CASEnergy Coalition.

The licensing was met with approval by other nuclear advocates, as well.

Marvin Fertel, president of the Nuclear Energy Institute, called it "a hallmark day for the U.S. nuclear energy industry."

And Republican lawmakers were quick to praise NRC's move.

Sen. Lamar Alexander of Tennessee said he was "very pleased to see it is ready to go online."

"Watts Bar Unit 2 will make a positive contribution to our nation's energy needs, and is in keeping with the

industry's record of safe, clean, affordable and reliable electricity production," said Sen. Jim Inhofe of Oklahoma, chairman of the Senate Environment and Public Works Committee, in a statement.

House Energy and Commerce Committee leaders Fred Upton of Michigan, Ed Whitfield of Kentucky and John Shimkus of Illinois said in a joint statement that, "Safe, clean nuclear power is, and must continue to be, a vital component of a diverse all-of-the-above energy portfolio. We hope this license marks an important step forward for new nuclear units by the NRC and cultivates an environment for future licenses to be approved in a more timely manner."

AIR POLLUTION:

EPA sends cost analysis for mercury rule to White House

Amanda Reilly, E&E reporter

Published: Thursday, October 22, 2015

U.S. EPA has sent a proposal concerning the costs of its mercury rule for power plants to the White House for review.

The White House Office of Management and Budget received the rule yesterday, according to OMB's website. EPA intends to wrap up its consideration of the costs of the mercury rule by April 15, according to recent court filings.

The proposed rule responds to a 5-4 ruling earlier this year in which the Supreme Court found that EPA should have considered costs when it determined it was "appropriate and necessary" to issue air toxics standards for power plants.

EPA issued the final Mercury and Air Toxics Standards, or MATS, in 2011. Although EPA did not consider costs in the onset of the rulemaking, it did release a cost-benefit analysis later in the regulatory process that found the rule would cost $9.6 billion annually.

EPA said that overall benefits would tally as much as $90 billion a year, though the analysis relied heavily on co-benefits for reductions in pollutants other than mercury.

The agency's move to add costs to its initial "appropriate and necessary" finding comes as MATS remains embroiled in the courts. Several states and industry groups have asked the U.S. Court of Appeals for the District of Columbia Circuit to completely scrap the rule in the wake of the Supreme Court ruling (*Greenwire*, Sept. 25).

EPA, on the other hand, has urged the court to keep the standards in place while it addresses the cost issue.

CLIMATE:

Head of U.N. green fund shrugs off Republicans' criticism

Lisa Friedman, E&E reporter

Published: Thursday, October 22, 2015

BONN, Germany -- The Green Climate Fund chief today shrugged off U.S. Republicans who called the global financing source for poor nations grappling with climate change a "slush fund" and said she was confident American dollars would materialize.

Héla Cheikhrouhou, executive director of the U.N.-launched but independent fund, said helping poor countries access low-carbon energy and build resilience to weather disasters have long been "bipartisan priorities" and should continue to be. That despite GOP promises to block the Obama administration's pledge of $3 billion over four years to the fund.

"I am still reasonably optimistic that there is going to be a decision to support," Cheikhrouhou said.

Asked about recent comments by Sen. John Barrasso (R-Wyo.) that "the American public does not support paying their hard-earned taxpayer dollars into a slush fund that spends billions on international climate change programs in developing nations," she said the Green Climate Fund has a transparent governing body and "can meet with the satisfaction of stakeholders."

Meanwhile, finance is emerging as the linchpin issue of a new global climate agreement.

Diplomats meeting in this Rhine river town to whittle down options for a deal that heads of state and ministers will finalize in Paris in December say it could all come down to whether efforts to help developing countries cut emissions and adapt to climate change are strong enough.

South African Ambassador Nozipho Mxakato-Diseko, who is leading the Group of 77 developing nations and China, accused rich countries of trying to back out of old promises and shift the burden on providing money to poor countries to wealthier developing nations.

"Just this year, many of our members have been ravaged by hurricanes that wipe away years of development. In contrast to Hurricane Sandy, what happens in the Philippines sets them back decades. What happens in Dominica sets them back decades," she said.

The United States has been pushing for language that allows all countries capable of doing so to provide money to the Green Climate Fund. Mxakato-Diseko argued that the 15 countries and the European Union defined by a 1992 U.N. convention as developed are the only ones with an obligation to provide finance. Those rules, she said, can't change now.

"The narrative that we are being given is that the world has changed and it's time to expand the so-called pool of donors of so-called climate aid," she said. But the U.N. convention, she added, "is specific, and it is legal."

The reality, though, is that countries of all sizes and levels of wealth already are delivering finance. Mexico, South Korea, Indonesia and even Mongolia have pledged money to the Green Climate Fund, and China has pledged $3.1 billion in bilateral "south-south" climate assistance.

PEOPLE:

Resources for the Future President Sharp to retire

Ariel Wittenberg, E&E reporter

Published: Thursday, October 22, 2015

Resources for the Future President Phil Sharp announced today that he will retire this coming summer.

"It has been an honor to be associated with RFF and its highly talented staff, board and network of scholars in pursuit of a worthy mission," Sharp said of the economic think tank in a statement. "RFF continues to advance our understanding of ways to more effectively manage our natural and environmental resources. RFF's objective, nonpartisan approach to critical issues is even more important today than when it was founded."

PEOPLE

Prior to joining RFF in 2005, Sharp served 10 terms in the U.S. House of Representatives as a Democrat representing Indiana's 2nd District and was a faculty member at Harvard University's John F. Kennedy School of Government, where he also directed its Institute of Politics.

Sharp said he will continue to work on climate and energy issues in his retirement, possibly teaching a course on climate policy.

Richard Schmalensee, who chairs RFF's board, said Sharp will be sorely missed at the organization.

"Phil has been a transformative leader of RFF, helping the organization to increase its impact while continuing to do rigorous, objective analysis of important issues in energy, environmental, and resource policy," Schmalensee said in a statement. "He leaves RFF as vital and important as it has ever been, and it will be difficult to fill his shoes."

AIR POLLUTION:

Judges question proper home for truckers' fight against Calif. rule

Robin Bravender, E&E reporter

Published: Thursday, October 22, 2015

A panel of judges today questioned whether truckers can sue U.S. EPA in a federal appeals court over California greenhouse gas rules for heavy trucks.

The Owner-Operator Independent Drivers Association is challenging EPA's approval of California rules that require long-haul truckers to install fuel-efficient tires and aerodynamic devices on their trailers aimed at boosting fuel efficiency and lowering greenhouse gas emissions. Under the Clean Air Act, EPA can grant waivers to allow California to adopt its own emission standards for new motor vehicles.

The trucking group argued to the U.S. Court of Appeals for the District of Columbia Circuit today that California's rules -- which took effect after EPA granted a waiver last year -- are unconstitutional. The rules, the association argues, violate the Constitution's Commerce Clause by reaching outside the state's boundaries to regulate interstate motor carriers. The rules also discriminate against out-of-state carriers and burden interstate commerce, the association told the court.

But judges today questioned whether their court was the appropriate venue for the case.

"You haven't brought a challenge to the waiver here," Judge Thomas Griffith, a Republican appointee, told the attorney representing the trucking group. Griffith questioned why EPA would be a party to the

lawsuit. "We only look at challenges to waivers," he said, adding that a state court in California may be a more appropriate venue.

Judge Brett Kavanaugh, another Republican appointee, also questioned the truckers' challenge to the waiver. Even if the state law were unconstitutional, he said, that wouldn't make the waiver adopted by EPA unconstitutional.

Paul Cullen, the attorney representing the drivers association, said the waiver granted by EPA has an unconstitutional effect. He said 90 percent of the costs imposed by California's rule are expected to occur outside the state.

The state's rules, the group said in a brief to the court, "carved out numerous exemptions which insulated California 'in-state' truckers from compliance, but required interstate long-haul truckers to shoulder the full burden and expense of regulatory compliance -- even though they drive significantly fewer miles on California roads than in-state truckers. This is a quintessential form of discrimination which the Supreme Court has consistently held to be unconstitutional under the Commerce Clause."

Justice Department attorney Michele Walter pressed the judges to dismiss the lawsuit due to a "lack of substantive challenge" over EPA's waiver.

An opinion in *Owner-Operator Independent Drivers Association v. EPA* is expected within the next year.

COAL:

Blankenship aims to put politics, regs on trial

Published: Thursday, October 22, 2015

Massey Energy Co. CEO Don Blankenship and his lawyers have been ordered to not speak to jurors in his trial about Blankenship's belief that he's a victim of the Obama administration and to not argue over the validity of safety rules.

Blankenship, a vocal critic of President Obama, is standing trial for a 2010 West Virginia coal mine explosion that killed 29 people (*E&ENews PM*, Sept. 30). But Blankenship's attorneys have been trying to prove that the Obama administration targeted the mine for inspections before the explosion to undermine the prominent West Virginia Republican and that demands by regulators were "almost impossible to implement" before the explosion.

Prosecutors have objected to these statements as violating the order to not put federal regulations on trial.

Blankenship tried to get the charges dismissed on the grounds that U.S. Attorney Booth Goodwin, an Obama appointee and son of West Virginia's former Democratic Party chairman, pursued the charges against him at the behest of longtime rival Sen. Joe Manchin (D) (AP/London *Guardian*, Oct. 21). **-- BTP**

DEFENSE:

DOD is praised for helping 'de-politicize' climate change

Ariel Wittenberg, E&E reporter

Published: Thursday, October 22, 2015

Climate security experts credited the Defense Department for helping to make believing in climate change more mainstream during an event at the Woodrow Wilson International Center for Scholars in Washington, D.C., yesterday.

"I know the high respect with which the military is regarded in this country, and I can only say that I think it is hugely important that the military contributes to this discussion on the basis of facts and science," said David O'Sullivan, the E.U. ambassador to the United States. "The work they are doing to de-politicize these issues, not even scientists can do that."

O'Sullivan introduced a panel to discuss what experts have learned about how to make climate change issues more accessible to everyday Americans.

Looking toward December's U.N. climate talks in Paris, O'Sullivan said that the military's work on and support of renewable energy, among other things, has helped such measures gain traction outside the Beltway.

"I know very well that Washington is considered un-American," he said. "I think it is probably held with as much respect outside the Beltway as Brussels is held throughout Europe. But making a connection to the states is hugely important, and the military has helped do that."

Phyllis Cuttino, director of clean energy initiatives at the Pew Charitable Trusts, agreed.

"The most important development in this debate is DOD's leadership," she said. "They have certainly done a lot of work, and their leadership is important now and in the future."

Cuttino was part of a team of climate security experts who toured the home districts of lawmakers on the House and Senate Armed Services committees a few years ago giving talks to voters in the hopes of putting political pressure on lawmakers to create climate security policy.

"What we learned is that both the public and the elites really do respond to the national security message, but it takes time to explain," she said. "It's not an instinctive connection that people make. Today, if you asked someone how climate change impacts their life, they might say, 'Wacky weather,' but it will take longer to make the connection to national security impacts."

Andrew Holland, a senior fellow at the American Security Project, noted the impact of natural disasters at home is one entry point for teaching the public about climate security.

"People care about their own backyard," he said.

That issue can help open doors to discussions about climate changes' impact on military readiness, said retired Air Force Gen. Ron Keys, who sits on Center for Naval Analyses' Military Advisory Board.

"People at home who are hit by a hurricane don't want to call up my guys and ask for a rescue and have the answer be, 'Well, I'd love to come down there, but I'm up to my ass in water myself,'" he said.

Retired Marine Corps Lt. Gen. Richard Zilmer, who also is on CNA's advisory panel, said he has seen success in describing his war experience as fighting over energy and oil.

"When you talk about national security and climate change, we bring a lot of scar tissue with us to the table," he said. "And I don't want my grandson sitting in Kuwait 15 years from now doing the same thing I was doing there 20 years ago."

ENERGY EFFICIENCY:

Mass., Calif. lead states on ACEEE's annual scorecard

Published: Thursday, October 22, 2015

Massachusetts, California and Vermont topped the rankings of a scorecard of states on energy efficiency released yesterday.

Oregon and Rhode Island rounded out the top five states in the rankings published by the American Council for an Energy-Efficient Economy. Mississippi, Louisiana, South Dakota, Wyoming and North Dakota made up the bottom of the list.

Texas achieved the largest increase in ranking over last year's scorecard, jumping eight spots to 26th nationally after moving more aggressively to police building energy code compliance in partnership with the U.S. Energy Department.

Texas is currently resisting the federal Clean Power Plan, but the ACEEE anticipates the policy to push more states to increase energy efficiency (*EnergyWire*, Oct. 2).

"As states move to frame their plans under the federal Clean Power Plan, this year marks a tipping point for energy efficiency," ACEEE Executive Director Steve Nadel said in a statement. "State policies are increasingly encouraging utilities to invest in cost-effective efficiency, prompting them to adopt new business models that align their interests with those of customers and policymakers. We can see this taking hold in the 20 states that improved their Scorecard rank in 2015" (Jordan Blum, *Fuel Fix*, Oct. 21). -- **BTP**

AIR POLLUTION:

EPA, greens reach deal on Utah permit challenge

Amanda Reilly, E&E reporter

Published: Thursday, October 22, 2015

U.S. EPA and environmental groups have agreed to settle a lawsuit over the operating permit for a Utah coal-fired power plant.

The proposed agreement would require Deseret Power Electric Cooperative to submit an application for a new permit mandating the installation of nitrogen oxide pollution controls. If EPA issues a final permit with those controls, the groups would withdraw their challenge.

The 500-megawatt Bonanza Power Plant in the Uintah and Ouray Indian Reservation burns coal from Colorado's Deserado mine. Because of its location on tribal land, the 30-year-old plant falls under the jurisdiction of EPA instead of the state of Utah.

The Sierra Club and WildEarth Guardians earlier this year challenged the December 2014 operating permit issued to Deseret by EPA Region 8.

The groups say EPA issued the permit before completing an analysis of the best available pollution

controls for the plant. The permit is intended to ensure that the plant won't contribute to a violation of a national ambient air quality standard.

The proposed settlement agreement, published today in the *Federal Register*, would also require Deseret to withdraw an outstanding permit application. Both Deseret and the Sierra Club would withdraw related requests under the Freedom of Information Act.

The proposed settlement is subject to a 30-day public comment period.

AIRLINES:

Upside to crowded flights: better fuel efficiency -- report

Sean Reilly, E&E reporter

Published: Thursday, October 22, 2015

Airlines' ability to pack more people onto their planes may leave passengers grumbling, but it's helping to improve the industry's fuel economy, a new analysis concludes.

Between 2013 and 2014, U.S. carriers' fuel efficiency increased by 1.7 percent after showing no gain the preceding year, according to the International Council on Clean Transportation, a Washington, D.C.-based nonprofit. The main factors behind the increase: more seats on individual planes and more passengers filling those seats, the report says. The effect is to allow airlines to move the same number of flyers on fewer flights, albeit at the cost of "reduced passenger comfort" and longer wait times between flights.

"It's a surprising finding for us," Dan Rutherford, the council's director for marine and aviation programs, said in an interview. Researchers had previously thought efficiency gains related to "load factors" were "petering out," he said. The efficiency ratings are based on a yardstick that plots passenger miles against fuel consumption. Between 2000 and 2010, the airline industry's yearly fuel efficiency gains had averaged 2.8 percent, falling to 1.3 percent through 2012, the group previously reported (*Greenwire*, Nov. 19, 2014).

The issue has consequences for the United States' ability to curb overall greenhouse gas emissions; as of 2013, commercial aircraft, including passenger and cargo flights, accounted for 11 percent of emissions from the transportation sector. This summer, U.S. EPA proposed for the first time to regulate aviation-related greenhouse gas discharges under the Clean Air Act; under the status quo, emissions from the industry will otherwise more than double by 2050 in comparison with 2005 levels, according to a Federal Aviation Administration forecast cited in the report.

In an emailed statement, an airline industry representative downplayed the impact of "yield management" on improved efficiency and instead attributed the bulk of the savings to better technology, more economical engines and other factors. Thanks to "relentless efforts," U.S. airlines carried 20 percent more passengers and cargo in 2014 than in 2000 while emitting 8 percent less carbon dioxide, said Melanie Hinton, a spokeswoman for Airlines for America. The industry is now part of a global coalition committed to 1.5 percent annual average fuel efficiency improvements through 2020 and carbon-neutral growth from 2020, Hinton added, "subject to critical aviation infrastructure, operational and technology advances achieved by government and industry."

But the clean transportation council's report, released today, again shows wide gaps in the performance of the 13 carriers whose domestic operations are ranked. Alaska Airlines retained its status as the most fuel-efficient carrier, followed by Spirit Airlines and Frontier Airlines. While Hawaiian Airlines was squarely

in the middle, Delta Air Lines ranked 11th and American Airlines was again at the bottom.

The overall fuel efficiency gap between the most and least fuel-efficient airlines shrank slightly from 27 percent in 2013 to 25 percent last year.

BIOFUELS:

DuPont's Koninckx says RFS uncertainty driving investments abroad

Published: Thursday, October 22, 2015

As the renewable fuel standard faces continued regulatory and legislative uncertainty, DuPont Biofuels is set to open the world's largest cellulosic ethanol biorefinery in Iowa at the end of the month. How will the uncertainty impact production and international partnerships? During today's OnPoint, Jan Koninckx, global business director of biofuels at DuPont, discusses his company's plans to continue expanding its business internationally in response to an uncertain landscape in the United States.

POWER PLAN HUB:

Final Clean Power Plan in *Federal Register* on Friday

Rod Kuckro, E&E reporter

Published: October 22, 2015

The epic battle over the Obama administration's signature climate change initiative kicks off tomorrow when it will be published in the *Federal Register*.

Also to be published tomorrow are the final rule for new and modified power plants and the proposed federal plan for existing power plants that would trigger if a state chooses not to submit its own plan to comply with the Clean Power Plan.

POWER PLAYS

Each Monday, **Power Plays** previews upcoming moves on the way to Clean Power Plan compliance and recaps the week's developments.

Legal challenges could be filed with the U.S. Court of Appeals for the District of Columbia Circuit as early as tomorrow afternoon.

And Senate Majority Leader Mitch McConnell (R-Ky.) will be introducing resolutions next week to scuttle the rules (*E&ENews PM*, Oct. 22).

Here is the latest coverage by E&E reporters:

- It's showtime for legal and Hill battles (*Greenwire*, Oct. 22).

- State regulators stressed by U.S. EPA initiatives, budget woes (*Greenwire*, Oct. 22).

Hi Rob;

Thanks very much for your comments. I first sent a sample series PHEV fuel economy label to Dave Good and he said that because the combustion engine could start that this is a blended PHEV. The combustion engine does not start during testing on any of the cycles. I then started to obtain sample blended PHEV fuel economy label from our logistic people and found that we had some problems with the gasoline/electric gallons per 100 mile value in that it didn't accept a value equal to zero and no tenths were allowed. It is now being corrected on our blended PHEV label to accept our value of 0.0 gallons per 100 miles.

In addition we are having to go back to the vendor that provided our Monroney label program so that the "All electric range = 0-17 miles" and not a single number as it currently exists. I guess it was changed back in 2014. Once we have the label problems worked out I will send them to Dave and copy you if you like.

I will have to discuss your EOT with my colleagues on Monday. Yes, each of the two model types has only one configuration and sales weighed averaging was not needed.

Have a nice weekend.

Best regards,

Ex. 7

I do not see anything amiss in the data, and based on it I would be comfortable using the values in the spreadsheets. Your interpretation of the values is correct, but if it helps to jot the numbers on an actual label, I'd be happy to review it and double-check it.

Are these vehicles blended or series PHEVs? I suspect they are series (i.e., like the Volt) and that they do not mix gas and electricity during charge-depleting operation. They behaved like series (aka "non-blended") on the test cycles, that much is clear, but the cycles are not very challenging and blended PHEVs don't always call upon the combustion engine during testing. We consider them blended if, for example, hard accelerations or high speeds (such as those in the US06) bring the combustion engine to life before the battery is depleted. The Ford PHEVs operated this way: all-electric on the test cycle but not necessarily so in the real world. The solution in this case is to express the all-electric range as a range, e.g., 0-17 miles, meaning that under light loads an all-electric range is possible, but not under all conditions. You don't want to claim an all-electric range if it's not really accessible in the real world, regardless of how the car performed on the mild city and highway tests.

Are the charge-depleting test cycles all the cycles that were run, up to and including the cycle where the End of Test (EOT) criterion was met? You entered cycles beyond the transition cycle (which is good!), I just want to make sure you didn't enter more than required. I am trying to educate manufacturers on this; since the recharge energy is based on all cycles up to the EOT, then the recharge energy needs to account for any charging gains or losses that took place up to the EOT.

Finally, I assume, like most PHEVs to date, that each of these model types has only one base level/configuration/subconfiguration, and that sales-weighting of test results isn't needed. I am only beginning to address how to do this with another manufacturer, but it's not so easy or obvious how to do it with PHEVs.

That's all,

Subject: 2016 Audi A3 e-tron ultra Label

Hi Rob;

Sorry to bother you with this issue, but Audi wants to have label values for a number of press ride and drive events starting next week for the new PHEV Audi A3 e-tron and A3 e-tron ultra beginning next week. In the absence of Dave Good this week, I thought you might be able to take a look at the completed PHEV calculators for each of these models and determine if they are

in order. I have entered VGA index #102 for the A3 e-tron ultra into Verify and it has been accepted. My colleagues here are entering the EPA confirmatory tests for the A3 e-tron model into Verify, he is running into some snags so I am unable to enter that index into Verify at this time.

This is my first PHEV label and I want to be sure I have all the information correct and that it would pass through any audits that Dave has planned for PHEV models. The label section of your calculator indicates the gas/electric combined value in the row labeled charge-depleting fuel economy (MPGe), while the row labeled charge-sustaining fuel economy (MPG) would complete the gasoline only section of the label, correct? I believe the composite values are used to assess the fuel economy rating and GHG rating but do not appear on fuel economy labels.

If you have any questions or suggestions please contact me directly.

Best regards,

No problem; enjoy your weekend as well.

I suspect that the correct number of charge-depleting tests was entered, as there isn't a reason to keep testing after the EOT has been met. But just in case, it's worth checking that this is the case, as having additional cycles in the calculations beyond the EOT cycle might cause some minor variation in the values.

Subject: RE: 2016 Audi A3 e-tron ultra Label

Hi Rob;

Thanks very much for your comments. I first sent a sample series PHEV fuel economy label to

Dave Good and he said that because the combustion engine could start that this is a blended PHEV. The combustion engine does not start during testing on any of the cycles. I then started to obtain sample blended PHEV fuel economy label from our logistic people and found that we had some problems with the gasoline/electric gallons per 100 mile value in that it didn't accept a value equal to zero and no tenths were allowed. It is now being corrected on our blended PHEV label to accept our value of 0.0 gallons per 100 miles.

In addition we are having to go back to the vendor that provided our Monroney label program so that the "All electric range = 0-17 miles" and not a single number as it currently exists. I guess it was changed back in 2014. Once we have the label problems worked out I will send them to Dave and copy you if you like.

I will have to discuss your EOT with my colleagues on Monday. Yes, each of the two model types has only one configuration and sales weighed averaging was not needed.

Have a nice weekend.

Best regards,

Battle lines drawn as carbon rule fight moves to courts and Congress

By Kevin Rogers

With the Environmental Protection Agency's final Clean Power Plan published in the Federal Register, more than two dozen states and and more than a dozen industry groups went to court Friday to overturn the plan, 15 states and two cities vowed to defend it, and lawmakers in both chambers of Congress readied votes to kill it.

The campaign to attack the regulations was met with a forceful response from the agency

which said the power plant carbon rules pass legal muster.

The rule for existing power plants, which require states to submit compliance plans to hit specific carbon reduction targets by 2030, is coupled with a rule setting hard emissions limits for new fossil fuel-fired plants. Combined, their goal is to cut sector carbon emissions by 32 percent from 2005 levels.

While the states, led by West Virginia, and industry groups, including the National Mining Association and the Chamber of Commerce, concentrated their legal fire on the standards for existing plants, Congress will seek to overturn both regulations, using the Congressional Review Act.

Senate Majority Leader Mitch McConnell, R-Ky., said he, with Sen. Joe Manchin, D-W.Va., would introduce a resolution to void the rule for new plants. Sens. Shelley Moore Capito, R-W.Va., and Sen. Heidi Heitkamp, D-N.D., meanwhile, will put forth a resolution to block the existing plant rules.

"Here's what is lost in this Administration's crusade for ideological purity: the livelihoods of our coal miners and their families. Folks who haven't done anything to deserve a 'war' being declared upon them," McConnell said in a statement. "I have vowed to do all I can to fight back against this administration on behalf of the thousands of Kentucky coal miners and their families."

Rep. Ed Whitfield, R-Ky., announced that he would introduce resolutions to nullify both rules on Monday.

Under the Congressional Review Act, both chambers have 60 days to vote to disapprove of executive rulemaking. The resolutions would then be sent to the president, and both chambers would have to win a two-thirds majority to overturn the threatened presidential veto.

That gives Republicans a steep hill to climb: They would have to win over four more Democrats to advance a resolution in the Senate, and 11 more to override a veto.

Democrats in both chambers have vowed to block any efforts to kill the regulations.

"September 2015 was the hottest month ever recorded," Sen. Ed Markey, D-Mass., said in a statement. "Now it's time to turn up the political heat on climate deniers and their allies that will try to block this critical action to address climate change."

The legal challenge was launched by a group of 25 states, led by West Virginia, who asked the U.S. Court of Appeals for the District of Columbia Circuit to stay implementation of the existing plants rule until its legality could be established.

"The EPA's rule is flatly illegal, and one of the most aggressive executive branch power grabs that we've seen in a long time," Attorney General Patrick Morrisey told reporters on a

call. "The EPA is trying to transform itself from an environmental regulatory authority to a central energy-planning authority. That's not permitted under the Clean Air Act, the case law or the Constitution."

The states allege that the rules would illegally double-regulate power plants by limiting carbon under one section of the Clean Air Act while limiting other pollutants under a different section. The suit also alleges the new rule unlawfully presses states to cycle out coal fired electricity in favor of natural gas and renewable energy.

Administrator Gina McCarthy, however, defended the rules as "grounded firmly in science and the law," and said they wouldn't wreak the economic harm opponents said it would.

"The Plan is fully consistent with the Clean Air Act, and relies on the same time-tested state-federal partnership that, since 1970, has reduced harmful air pollution by 70 percent, while the U.S. economy has tripled," she wrote in a blog post.

McCarthy will be supported in the agency's legal defense by attorneys general from 15 states, joined by New York City and the District of Columbia, who plan to file motions in support of the rule next week.

On a call with reporters, New York Assistant Attorney General Michael Myers, of the Environmental Protection Bureau, said that the states and industries opposing the rules wouldn't meet the high bar to achieve a stay.

To stay the regulations, the plaintiffs would have to prove that, if the rule is implemented, it would would cause them irreversible harm; that the harm of not implementing the rules would be outweighed by the harm; and that their legal arguments against the rules would likely prevail.

"That is not a showing I believe the petitioners will be able to make here," Myers said.

He said that he expects that the coalition of states and cities offering legal support to the agency will grow before the support motions are officially filed.

The Chamber of Commerce, joining 18 additional industry groups in a suit of their own, also sought a stay, saying that the final rules were a "bad deal for America" and would cause economic damage to businesses and consumers alike, through higher electricity prices and job losses.

"EPA completely bypassed the legislative branch, basing its 2,000-page rule on roughly 300 words in the Clean Air Act and including a host of policies that have already been considered and rejected by Congress," Chamber President and CEO Thomas Donahue said in a statement.

The National Mining Association, in a separate lawsuit, said the rules had potential for "substantial harm" if they weren't blocked.

Also filing suit against the EPA on Friday was Murray Energy Corp., the nation's largest privately owned coal company.

But environmentalists vowed to stand with EPA against "big polluters and their allies."

"They can throw everything and the kitchen sink at this standard, but the Clean Power Plan's push to cut dangerous carbon pollution from power plants for the first time ever is based on a law passed by Congress and upheld by the Supreme Court, and it has the overwhelming support of the American people," Mary Anne Hitt, director of the Sierra Club's Beyond Coal program, said in a statement.

The Associated Press contributed to this story.

Mexico braces for strongest hurricane in Western hemisphere

By Christopher Sherman

PUERTO VALLARTA, Mexico (AP) — Hurricane Patricia barreled toward southwestern Mexico Friday as a monster Category 5 storm, the strongest ever in the Western Hemisphere.

Residents and tourists were hunkering down or trying to make last-minute escapes ahead of what forecasters called a "potentially catastrophic landfall" later in the day.

The storm was homing in on a Pacific coastline dotted with sleepy fishing villages and gleaming resorts, including the popular beach city of Puerto Vallarta and the port of Manzanillo.

After hitting land, Patricia's projected path would quickly take it over mountainous terrain that is prone to dangerous flash floods and landslides.

Why did Hurricane Patricia become a monster so quickly?

By Seth Borenstein

WASHINGTON (AP) — Hurricane Patricia zoomed from tropical storm to record-beater in 30 hours flat like a jet-fueled sports car.

Why? The Pacific storm had just the right ingredients.

Plenty of warm water provided the energy what meteorologists call explosive intensification. The air was much moister than usual, adding yet more fuel. And at the same time, upper-

level crosswinds — called shear — that restrain a hurricane from strengthening were missing for much of Thursday, meteorologists said.

"I was really astounded," said MIT meteorology professor Kerry Emanuel. "It was over the juiciest part of the eastern Pacific."

Talks on climate deal heat up over bill for global warming

By Karl Ritter

BONN, Germany (AP) — The trillion-dollar question of who should pay for global warming is coming to a head in talks on an international climate pact, as developing countries worry they won't get enough money to tackle the problem.

With just five weeks left before a U.N. climate summit in Paris, developing countries closed ranks at weeklong talks ending Friday in Bonn and called on wealthy nations to make firm financial commitments to help them fight and adapt to climate change.

The Paris summit "will be judged by what is contained in the core agreement on finance. For us, that will be the yardstick for success," said Nozipho Mxakato-Diseko of South Africa, who chairs a developing country bloc of 134 countries.

In testy exchanges with the Algerian and U.S. diplomats leading the climate talks, Mxakato-Diseko complained that a draft deal they produced was "lopsided" in favor of developed countries. She even drew an analogy to apartheid.

American Airlines 3Q profit soars on cheaper jet fuel

By David Koenig

FORT WORTH, Texas (AP) — A big merger and cheaper jet fuel are doing wonders for American Airlines.

The world's biggest airline reported Friday that net income jumped 80 percent to $1.69 billion in the third quarter thanks to a huge drop in fuel spending.

The shares fell, however, after American leaders said that next year they will introduce new fares designed to compete with discount carriers including Spirit and Frontier. Spirit's stock took an even bigger hit — it was down more than 6 percent at midday.

U.S. airfares rose faster than inflation for several years, but they have dropped this year as airlines took advantage of cheaper fuel to increase flights or use bigger planes. They have cut prices to fill the growing number of seats.

More

Amid protests, bear hunting season opens in Florida

By Jason Dearen

GAINESVILLE, Fla. (AP) — Hunters for the first time in more than 20 years will trudge through Florida woods on Saturday to legally kill black bears, a contentious wildlife management action that has activists taking to the streets in protest.

Florida wildlife officials have sold more than 3,200 permits to hunters from all over, including 1970s rocker Ted Nugent and Liesa Priddy, a rancher and Florida Fish and Wildlife Conservation Commission member who voted to approve the new hunts.

The hunt was approved by the commission earlier this year after much debate. In the end, the members said the black bear population had grown to 3,500 — up from a few hundred in the 1970s — and presented a safety problem. With the state's ballooning human population pushing development into ever more rural areas, human-bear encounters have shot up recently. The decision overturned a 20-year ban on bear hunting in Florida.

For this first hunt, the state will allow hunters to slay 320 bears in four regions where populations are densest. Thirty-two other states also allow black bear hunts.

Battle lines drawn as carbon rule fight moves to courts and Congress

By Kevin Rogers

With the Environmental Protection Agency's final Clean Power Plan published in the Federal Register, more than two dozen states and and more than a dozen industry groups went to court Friday to overturn the plan, 15 states and two cities vowed to defend it, and lawmakers in both chambers of Congress readied votes to kill it.

The campaign to attack the regulations was met with a forceful response from the agency

which said the power plant carbon rules pass legal muster.

The rule for existing power plants, which require states to submit compliance plans to hit specific carbon reduction targets by 2030, is coupled with a rule setting hard emissions limits for new fossil fuel-fired plants. Combined, their goal is to cut sector carbon emissions by 32 percent from 2005 levels.

While the states, led by West Virginia, and industry groups, including the National Mining Association and the Chamber of Commerce, concentrated their legal fire on the standards for existing plants, Congress will seek to overturn both regulations, using the Congressional Review Act.

Senate Majority Leader Mitch McConnell, R-Ky., said he, with Sen. Joe Manchin, D-W.Va., would introduce a resolution to void the rule for new plants. Sens. Shelley Moore Capito, R-W.Va., and Sen. Heidi Heitkamp, D-N.D., meanwhile, will put forth a resolution to block the existing plant rules.

"Here's what is lost in this Administration's crusade for ideological purity: the livelihoods of our coal miners and their families. Folks who haven't done anything to deserve a 'war' being declared upon them," McConnell said in a statement. "I have vowed to do all I can to fight back against this administration on behalf of the thousands of Kentucky coal miners and their families."

Rep. Ed Whitfield, R-Ky., announced that he would introduce resolutions to nullify both rules on Monday.

Under the Congressional Review Act, both chambers have 60 days to vote to disapprove of executive rulemaking. The resolutions would then be sent to the president, and both chambers would have to win a two-thirds majority to overturn the threatened presidential veto.

That gives Republicans a steep hill to climb: They would have to win over four more Democrats to advance a resolution in the Senate, and 11 more to override a veto.

Democrats in both chambers have vowed to block any efforts to kill the regulations.

"September 2015 was the hottest month ever recorded," Sen. Ed Markey, D-Mass., said in a statement. "Now it's time to turn up the political heat on climate deniers and their allies that will try to block this critical action to address climate change."

The legal challenge was launched by a group of 25 states, led by West Virginia, who asked the U.S. Court of Appeals for the District of Columbia Circuit to stay implementation of the existing plants rule until its legality could be established.

"The EPA's rule is flatly illegal, and one of the most aggressive executive branch power grabs that we've seen in a long time," Attorney General Patrick Morrisey told reporters on a

call. "The EPA is trying to transform itself from an environmental regulatory authority to a central energy-planning authority. That's not permitted under the Clean Air Act, the case law or the Constitution."

The states allege that the rules would illegally double-regulate power plants by limiting carbon under one section of the Clean Air Act while limiting other pollutants under a different section. The suit also alleges the new rule unlawfully presses states to cycle out coal fired electricity in favor of natural gas and renewable energy.

Administrator Gina McCarthy, however, defended the rules as "grounded firmly in science and the law," and said they wouldn't wreak the economic harm opponents said it would.

"The Plan is fully consistent with the Clean Air Act, and relies on the same time-tested state-federal partnership that, since 1970, has reduced harmful air pollution by 70 percent, while the U.S. economy has tripled," she wrote in a blog post.

McCarthy will be supported in the agency's legal defense by attorneys general from 15 states, joined by New York City and the District of Columbia, who plan to file motions in support of the rule next week.

On a call with reporters, New York Assistant Attorney General Michael Myers, of the Environmental Protection Bureau, said that the states and industries opposing the rules wouldn't meet the high bar to achieve a stay.

To stay the regulations, the plaintiffs would have to prove that, if the rule is implemented, it would would cause them irreversible harm; that the harm of not implementing the rules would be outweighed by the harm; and that their legal arguments against the rules would likely prevail.

"That is not a showing I believe the petitioners will be able to make here," Myers said.

He said that he expects that the coalition of states and cities offering legal support to the agency will grow before the support motions are officially filed.

The Chamber of Commerce, joining 18 additional industry groups in a suit of their own, also sought a stay, saying that the final rules were a "bad deal for America" and would cause economic damage to businesses and consumers alike, through higher electricity prices and job losses.

"EPA completely bypassed the legislative branch, basing its 2,000-page rule on roughly 300 words in the Clean Air Act and including a host of policies that have already been considered and rejected by Congress," Chamber President and CEO Thomas Donahue said in a statement.

The National Mining Association, in a separate lawsuit, said the rules had potential for "substantial harm" if they weren't blocked.

Also filing suit against the EPA on Friday was Murray Energy Corp., the nation's largest privately owned coal company.

But environmentalists vowed to stand with EPA against "big polluters and their allies."

"They can throw everything and the kitchen sink at this standard, but the Clean Power Plan's push to cut dangerous carbon pollution from power plants for the first time ever is based on a law passed by Congress and upheld by the Supreme Court, and it has the overwhelming support of the American people," Mary Anne Hitt, director of the Sierra Club's Beyond Coal program, said in a statement.

The Associated Press contributed to this story.

Mexico braces for strongest hurricane in Western hemisphere

By Christopher Sherman

PUERTO VALLARTA, Mexico (AP) — Hurricane Patricia barreled toward southwestern Mexico Friday as a monster Category 5 storm, the strongest ever in the Western Hemisphere.

Residents and tourists were hunkering down or trying to make last-minute escapes ahead of what forecasters called a "potentially catastrophic landfall" later in the day.

The storm was homing in on a Pacific coastline dotted with sleepy fishing villages and gleaming resorts, including the popular beach city of Puerto Vallarta and the port of Manzanillo.

After hitting land, Patricia's projected path would quickly take it over mountainous terrain that is prone to dangerous flash floods and landslides.

Why did Hurricane Patricia become a monster so quickly?

By Seth Borenstein

WASHINGTON (AP) — Hurricane Patricia zoomed from tropical storm to record-beater in 30 hours flat like a jet-fueled sports car.

Why? The Pacific storm had just the right ingredients.

Plenty of warm water provided the energy what meteorologists call explosive intensification. The air was much moister than usual, adding yet more fuel. And at the same time, upper-

level crosswinds — called shear — that restrain a hurricane from strengthening were missing for much of Thursday, meteorologists said.

"I was really astounded," said MIT meteorology professor Kerry Emanuel. "It was over the juiciest part of the eastern Pacific."

Talks on climate deal heat up over bill for global warming

By Karl Ritter

BONN, Germany (AP) — The trillion-dollar question of who should pay for global warming is coming to a head in talks on an international climate pact, as developing countries worry they won't get enough money to tackle the problem.

With just five weeks left before a U.N. climate summit in Paris, developing countries closed ranks at weeklong talks ending Friday in Bonn and called on wealthy nations to make firm financial commitments to help them fight and adapt to climate change.

The Paris summit "will be judged by what is contained in the core agreement on finance. For us, that will be the yardstick for success," said Nozipho Mxakato-Diseko of South Africa, who chairs a developing country bloc of 134 countries.

In testy exchanges with the Algerian and U.S. diplomats leading the climate talks, Mxakato-Diseko complained that a draft deal they produced was "lopsided" in favor of developed countries. She even drew an analogy to apartheid.

American Airlines 3Q profit soars on cheaper jet fuel

By David Koenig

FORT WORTH, Texas (AP) — A big merger and cheaper jet fuel are doing wonders for American Airlines.

The world's biggest airline reported Friday that net income jumped 80 percent to $1.69 billion in the third quarter thanks to a huge drop in fuel spending.

The shares fell, however, after American leaders said that next year they will introduce new fares designed to compete with discount carriers including Spirit and Frontier. Spirit's stock took an even bigger hit — it was down more than 6 percent at midday.

U.S. airfares rose faster than inflation for several years, but they have dropped this year as airlines took advantage of cheaper fuel to increase flights or use bigger planes. They have cut prices to fill the growing number of seats.

Amid protests, bear hunting season opens in Florida

By Jason Dearen

GAINESVILLE, Fla. (AP) — Hunters for the first time in more than 20 years will trudge through Florida woods on Saturday to legally kill black bears, a contentious wildlife management action that has activists taking to the streets in protest.

Florida wildlife officials have sold more than 3,200 permits to hunters from all over, including 1970s rocker Ted Nugent and Liesa Priddy, a rancher and Florida Fish and Wildlife Conservation Commission member who voted to approve the new hunts.

The hunt was approved by the commission earlier this year after much debate. In the end, the members said the black bear population had grown to 3,500 — up from a few hundred in the 1970s — and presented a safety problem. With the state's ballooning human population pushing development into ever more rural areas, human-bear encounters have shot up recently. The decision overturned a 20-year ban on bear hunting in Florida.

For this first hunt, the state will allow hunters to slay 320 bears in four regions where populations are densest. Thirty-two other states also allow black bear hunts.

Subject: New Hydrogen Infrastructure Assessments Webpage

CaFCP members,

The California Air Resources Board (ARB) has created a new webpage with information on ARB's assessments of hydrogen fueling infrastructure. In order to identify the areas of greatest need for fueling infrastructure development, ARB developed the California Hydrogen Infrastructure Tool (CHIT). CHIT is a Geographical Information System-based tool developed in the ArcGIS environment to assess the special distribution of the gap between the coverage provided by existing and funded hydrogen stations and the potential first adopter market for fuel cell electric vehicles. The new Hydrogen Infrastructure Assessments webpage provides resources for understanding and exploring the analysis completed by ARB through CHIT.

The new webpage may be found at

http://www.arb.ca.gov/msprog/zevprog/hydrogen/h2fueling.htm

For more information, contact Ex. 7 or Ex. 7

To: Bunker, Byron[bunker.byron@epa.gov]
From: Ex. 6
Sent: Mon 10/26/2015 1:20:52 AM
Subject: Volkswagen 2.0L TDI Diesel Emissions Issue, VW Action Code 23Q2

Director Bunker,

My wife and I own a 2012 Volkswagen (VW) Golf TDI 'Clean Diesel' passenger car equipped with a EA189 2.0-liter diesel engine. Our vehicle is fitted with the 'Gen 1' emissions aftertreatment system and uses a software defeat device to cheat on the results of NO_x emissions testing, and thus violates the US Clean Air Act (CAA). We purchased this vehicle, brand-new, from Stohlman Automotive of Tysons Corner, VA on July 25, 2011. Our two children have been regular passengers in the automobile since their births in June 2012 and June 2014 respectively. We are obviously extremely troubled about the long-term health implications this vehicle will have upon our family and our community due to exposure to excessive amounts of harmful NO_x pollutants. We are also very concerned about the financial repercussions this vehicle will have upon our family.

We purchased this vehicle due to its numerous publicized attributes:

- it is a 'Clean Diesel'; Tier 2 Bin 5/CA LEV II-compliant automobile (i.e., the automobile can be sold & driven in all 50 states)
- VW rated this vehicle @ 140 hp and 236 lbs./ft torque with 30 mpg city and 42 mpg highway; and claimed that real-world fuel economy tests beat EPA estimates
- numerous automotive publications indicated that the car was a highly rated 'green vehicle' blending 'clean' emissions with good fuel economy
    - ○ our test drive of a similarly equipped 2011 VW Golf TDI Clean Diesel confirmed reviews from the automotive publications;
- having been in production for the three previous years, the 2012 VW Golf TDI was not based-upon a new & untested design

It is now mid-October of 2015, and nearly 500 days have passed since this emissions system fraud was first uncovered by West Virginia University. VW is continuing with their 'song-and-dance' stalling tactics asking for customers to be patient and give VW time to engineer a solution. VW Group of America CEO Michael Horn said in congressional testimony October 8, 2015 that an engineering solution for 'Gen 1' vehicles, such as ours, would probably not be ready until late 2016. With 340,000+ 'Gen 1' vehicles affected and recall repairs requiring approximately 5-10 hours per vehicle our automobile would surely not be repaired until sometime in 2017. This time-frame is unreasonable. VW maliciously defrauded consumers and regulators; they should immediately remedy the situation and be severely punished.

Every component interconnected to the emissions system in our vehicle has been compromised. The 'post-resolution' attributes of the vehicle are completely nebulous - horsepower, torque, fuel economy, performance, maintenance requirements, reliability and warrantability are all unknown

quantities! Therefore the acceptability of any proposed remedy from VW should be at the discretion of the owner of the vehicle; not by the government, and certainly not by VW. Only the owner of the vehicle can determine the acceptable level of risk they are willing to bear. It is absolutely unreasonable for vehicle owners to be expected to wait another 500+ days for VW to implement a fix AND then bear the full burden of risk on a hastily designed, unproven, minimally tested 'Frankenstein' solution. Why should we trust VW? We demand that VW:

- offer owners the opportunity for an immediate 'buy back' of the affected cars for the entire purchase price of the vehicle
- repair all environmental damages; pay all government-issued penalties
- repair all vehicles ensuring full compliance with all US emissions standards
- fairly compensate owners for all inconveniences incurred due to the misdirected & deceitful December 2014 voluntary recall
- fairly compensate owners for all reasonable damages

For years we have been deceived by VW and their 'Clean Diesel'. Please help us ensure that those found to be responsible are held accountable and that victims' rights are fully protected.

Sincerely,

Mrs. Ex. 6 Mr. Ex. 6

Addendum

To add further insult to our problems with this car, this past weekend our VW reported a Check Engine Light (CEL) warning. Diagnosis from the Stohlman VW service department identified a CEL P046C code - a faulty Exhaust Gas Recirculation (EGR) valve - an approximate $900 repair. The EGR valve is a critical component in the 'Gen 1' diesel emissions aftertreatment system. We spoke to VW Customer Care (VW Customer Care Case # Ex. 6 suggesting that it is absurd that we pay one penny to repair a system is faulty due to defects in material design & workmanship. VW's response was that the emissions system is out-of-warranty and that there was nothing that they could do. We are being unfairly penalized for VW's criminal engineering and belated solutions.

Coincidentally, we have also recently been notified of NHTSA recall 15V483 (Steering Wheel Clock Spring) which may prevent the airbag on our 2012 VW Golf TDI from deploying in the event of a vehicle crash, for which there is no repair solution available. Can you see the long lines of dealers and people wanting to buy or trade for our vehicle?

Subject: A3 e-tron PHEVC Fuel Economy

Welcome back Dave;

You may have seen some mail to Rob French last week regarding the 2016 Audi A3 e-tron PHEV labels. After a lot of difficulty my colleagues have entered the EPA confirmatory test into Verify and test numbers were generated for the A3 e-tron label index #101 which I have now entered into the Verify label program. So now both the A3 e-tron ultra (index #102) and the A3 e-tron are ready to be audited. I would appreciate it if you can give me your query for these two labels so that I am sure I have the correct values to pass on to our press people for events to occur starting tomorrow. Rob reviewed the PHEV fuel economy calculators last Friday and only had a couple of minor questions.

If you can give me a timeline of when you can run your query that would be very helpful. Please

feel free to call me if you have any questions or comments.

Best regards,

Richard

MyDocument_2015_10_26_10_43_44.pdf
PHEV Calculator v18_etron ret.xlsm
PHEV Calculator v18_etron_Ultra ret.xlsm

Hi Dave;

Please find the latest PHEV calculators for the A3 e-tron and A3 e-tron ultra labels # 101 and #102 respectively. These were review last week by Rob, I only added the CD test numbers after my colleagues entered the EPA tests into Verify.

I only have one sample label to show you for the A3 e-tron ultra, I have marked that blended label up because our IT people are still working with the Monroney label vendor to make corrections. The proper annual fuel cost and 5-year fuel saving have to be manually entered and the program will be corrected to show the gallons per 100 mile value to the correct value of "0.0". It will also be corrected to show the all-electric range of 0-17 miles.

If you have and questions, please let me know.

Thanks,

Richard

News Briefs

EPA Ozone NAAQS Publication Will Start Clock For Suits

EPA plans to publish in the Oct. 26 *Federal Register* its final rule revising its ozone national ambient air quality standard (NAAQS) of 75 parts per billion (ppb) down to 70 ppb, starting a 60-day Clean Air Act clock for lawsuits that could come from advocates who say the rule is too weak and industry groups that say it is too strict.

Fertilizer Manufacturers Sue EPA Over Air Toxics Rule

Fertilizer manufacturers are suing EPA over its final rule tightening air toxics standards for the sector, claiming that the agency imposed unreasonable emissions control requirements that were applicable immediately upon the rule's issuance, even though EPA never gave the companies a chance to weigh in on the mandates.

Greenwire

CLEAN POWER PLAN:

States, industries launch legal assault

Robin Bravender and Jean Chemnick, E&E reporters

Published: Friday, October 23, 2015

The legal onslaught against the Obama administration's Clean Power Plan kicked off today as 25 states, industry and labor groups challenged the rule in court.

Today's formal publication of the U.S. EPA rule to curb power plants' greenhouse gas emissions triggered a 60-day deadline for challenging the rule in court. And opponents didn't waste any time; challenges began streaming in early this morning, and EPA's foes are asking judges to halt the power plant rules while the legal battle plays out. Today's court filings represent the opening salvo in a court fight that's expected to take years and may ultimately be decided by the Supreme Court.

More than two dozen states opposed to EPA's regulations promptly filed lawsuits this morning.

A coalition led by West Virginia filed a petition challenging the rule on behalf of 24 states: Alabama, Arizona, Arkansas, Colorado, Florida, Georgia, Indiana, Kansas, Kentucky, Louisiana, Michigan, Missouri, Montana, Nebraska, New Jersey, North Carolina, Ohio, South Carolina, South Dakota, Texas, Utah, West Virginia, Wisconsin and Wyoming.

West Virginia Assistant Attorney General J. Zak Ritchie arrived at the U.S. Court of Appeals for the District of Columbia Circuit early this morning to be first in line to file a lawsuit. Those who file the first petition win the distinction of being named on the lawsuit, and several petitioners were lined up at court this morning to file their petitions as soon as the clerk's office opened at 9 a.m.

"Petitioners will show that the final rule is in excess of the agency's statutory authority, goes beyond the bounds set by the United States Constitution, and otherwise is arbitrary, capricious, an abuse of discretion and not in accordance with law," the West Virginia petition says.

West Virginia Attorney General Patrick Morrisey (R) told reporters on a conference call this morning that states will file a motion with the court later this afternoon asking judges to freeze the rule while they consider its legality. He called the EPA rule "one of the most onerous and illegal regulations coming out of Washington, D.C., that we've seen in a long time."

Oklahoma today filed a separate lawsuit challenging EPA's power plant rules.

Additional petitions filed before press time came from the National Mining Association, Murray Energy Corp., the American Coalition for Clean Coal Electricity and the International Brotherhood of Boilermakers. Further challenges are expected.

The challenges to EPA's power plant rules will likely be consolidated into one lawsuit.

Opponents of the climate regulations have already previewed their arguments to the D.C. Circuit.

Early this year, the court denied an unusual request by states, energy companies and industry groups to block EPA from finalizing its proposed greenhouse gas standards for power plants. The judges refused to rule on the legality of the standards before they were finalized (*Greenwire*, June 9).

And in September, the appeals court denied another early effort to block the standards. Fifteen states led by West Virginia sought an emergency stay to halt the Clean Power Plan as litigation challenging the regulations played out. But the court denied that request, too, saying challengers hadn't met the "stringent standards" that apply to halt agency actions. The D.C. Circuit typically doesn't entertain challenges to air rules until they are formally published in the *Federal Register* (*Greenwire*, Sept. 9).

The coalition of states challenging EPA's final rule in court is broader than the group that waged the initial challenges. States that sued today that weren't involved in the preliminary challenges include Arizona, Colorado, Georgia, Missouri, Montana, New Jersey, North Carolina, Texas and Utah.

"We wanted to wait until the rules were final," Texas Attorney General Ken Paxton (R) told reporters

today.

Many legal experts viewed the preliminary court challenges as long shots. But now that EPA's rule is officially ripe for court challenges, EPA's foes say they like their chances.

"There are many compelling legal reasons why this rule should be declared invalid," Morrisey said. And Paxton said state challengers are "pretty confident that we're going to get a stay."

Challengers are asking the court to issue a stay halting the rules "as fast as possible" to "avoid the harms to the states," Morrisey said. He said states are particularly concerned in light of a June decision by the Supreme Court that found an EPA mercury rule unlawful.

EPA said that plants had already invested in pollution controls and were "well on their way to making emissions reductions." That is "obviously unacceptable, and we're seeking a stay to avoid a repeat of that result and put an end to this unlawful rule now," Morrisey said today.

It's unclear when the court will decide whether to halt the rule. The judges may wait until the 60-day deadline for lawsuits and another 30-day deadline for filing court motions have passed to allow all interested parties to weigh in.

EPA, allies on defense

But EPA and its defenders say the rule is on firm legal footing, the product of exhaustive stakeholder outreach and likely to stand the test of time.

EPA Administrator Gina McCarthy in a blog post today called the rule "fair, flexible, affordable, and designed to reflect the fast-growing trend toward cleaner American energy."

She argued that -- far from being a departure from past practice -- the existing power plan rule is "fully consistent with the Clean Air Act" and respects the "state-federal partnership" that has been the basis for air quality rules since the law was enacted in 1970.

The rule's opponents say it raises constitutional questions because EPA is preparing to implement a federal plan in states that opt not to put forward their own. The proposed federal implementation plan was also published in the *Federal Register* today and will be open for comment until January.

Rep. Ed Whitfield (R-Ky.), chairman of the House Energy and Commerce Subcommittee on Energy and Power, said at a hearing yesterday that the rule represented an "executive branch power grab at the expense of the legislative branch and the states."

But Richard Revesz of New York University School of Law said at the same hearing that the rule posed no constitutional problems "because states are not required to do anything." If they opt not to regulate, the federal government will instead. But there is no penalty to them for making that choice.

While the total number of states suing EPA has climbed, only five governors have thus far said they will not submit an implementation plan. The vast majority of the 25 states that will go to court hoping to topple the rule are also planning to comply with it.

McCarthy and EPA acting air chief Janet McCabe have claimed this as a victory. "We're encouraged to see that many states are beginning their own planning processes because that means they're preparing to take action," McCarthy said in today's blog post.

McCabe, air office senior counsel Joe Goffman and others note that they continue to communicate with states as they pivot to implementing the rule, often participating in lengthy meetings and calls with state administrators.

"We are committed to helping everyone better understand the Clean Power Plan and have been impressed -- but certainly not surprised -- by the remarkable level of constructive engagement across the board," McCarthy said in the post. "Conversations are happening across the country."

EPA also has allies among state attorneys general, and a group of 15 states and the District of Columbia released a statement in August criticizing the states led by West Virginia for seeking to stay the rule after it was first signed.

Today, New York Attorney General Eric Schneiderman (D) said he would back EPA when it came time to defend the rule in court.

"My office is prepared to join with our partners to aggressively defend EPA's Clean Power Plan -- rules that will significantly reduce climate change pollution nationally," he said in a statement this morning. "These rules give states the flexibility to choose the best measures to cut pollution, while maintaining electrical reliability and economic growth."

Eight other states joined New York in August, pledging to stand "with EPA to defend these necessary emission standards if they are challenged in court."

And administration boosters of the rule were quick to claim some Republican support. They circulated a statement in praise of the rule from two past EPA administrators who served under Republican presidents: George H.W. Bush's Administrator William Reilly and William Ruckelshaus, who served under Presidents Nixon and Reagan.

"Already, we understand that 24 states are lined up to ask that its implementation be stayed or suspended," said the two former administrators. "The country needs to reduce CO2 from existing power plants which generate 40 percent of America's [carbon dioxide]. The rule is needed, and the courts we hope will recognize that it is on the right side of history."

Earlier this week, Reilly told a gathering of state environmental regulators who will be responsible for crafting state plans that they should "move ahead with planning and assume the rule will survive" (*Greenwire*, Oct. 21).

While EPA's rule requires an initial submittal next year, final plans are not due until 2018 when courts are likely to have weighed in on the rule. Failure to submit a final plan at that juncture would be "a bad idea," he said, given EPA's authority to regulate power plants directly.

AIR POLLUTION:

Final ozone rule coming in Monday's *Federal Register*

Amanda Reilly, E&E reporter

Published: Friday, October 23, 2015

The Obama administration's final rule setting a new ozone standard will be published Monday in the *Federal Register*.

Congressional foes led by Rep. Jackie Walorski (R-Ind.) this week indicated they intend to challenge the standard using the Congressional Review Act, a legislative oversight law.

Publication will also open the rule to lawsuits and kick off a 60-day clock for the standard to become effective.

U.S. EPA on Oct. 1 set the national ambient air quality standard for ozone at 70 parts per billion. It's the upper end of a proposed range but represents a lower limit than the 75 ppb standard set by the George W. Bush administration in 2008.

Ground-level ozone is a component of smog that's formed when nitrogen oxides and volatile organic compounds react in the presence of sunlight. EPA said that, after a review of more than 1,000 studies, it determined the Bush limit didn't protect the public against negative health effects linked to ozone (*Greenwire*, Oct. 1).

EPA's decision comes after President Obama punted on setting a new standard in 2011 ahead of his re-election push.

According to EPA, limiting ground-level ozone concentrations to 70 ppb will save up to 660 lives, prevent 230,000 asthma attacks in children and prevent 630 asthma-related emergency visits by 2025.

Green groups, though, have opposed EPA's choice, arguing that it doesn't fulfill the Clean Air Act requirement that the standard protect the public with an adequate margin of safety. They've called for a limit to ground-level ozone of no higher than 60 ppb.

Environmentalists have threatened to file legal action challenging the 70 ppb standard (*Greenwire*, Sept. 29).

Industry groups, congressional Republicans and several states had urged EPA to retain the Bush standard. They've repeatedly said a lower limit would come with excessive compliance costs and have questioned the science backing EPA's decision.

EPA says the standard will cost $1.4 billion annually but achieve health care savings of up to $5.9 billion in 2025. The analysis excludes California, which is expected to take longer to come into compliance.

Joined by Republican Reps. Luke Messer, Larry Bucshon and Todd Rokita of Indiana and Rep. Glenn Grothman of Wisconsin, Walorski yesterday filed a Congressional Review Act joint resolution opposing the new standard.

In a statement, Walorski cited EPA's cost estimates and said she worried that the standard would affect job growth.

"It's time to end the EPA's assault on business," Walorski said in a statement. "We should focus on policies that grow the economy, not burying job creators under red tape and burdensome mandates."

Through the CRA, Congress can disapprove new rules once they are published under an expedited process; the president, however, would likely veto any congressional action that seeks to undo the new ozone standard.

EPA is poised to make determinations on which areas of the country are out of compliance with the new standard in 2017. States with areas in "nonattainment" will be required to develop plans to reduce ozone concentrations.

Manufacturers warn that the new standard will affect new construction projects right away by creating a permitting "limbo" (*Greenwire*, Oct. 8).

CLEAN POWER PLAN:

EPA foes teeing up Congressional Review Act bids

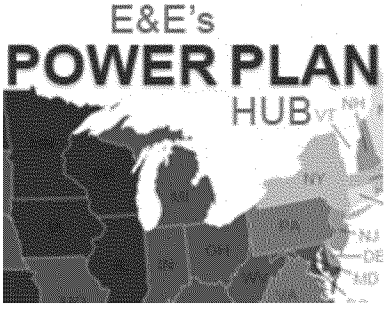
Jean Chemnick, E&E reporter

Published: Friday, October 23, 2015

Republicans on both sides of Capitol Hill are poised to introduce resolutions early next week to kill U.S. EPA's Clean Power Plan and its new power plant rule, which were published in the *Federal Register* this morning.

Senate Majority Leader Mitch McConnell (R-Ky.) will introduce his resolution targeting EPA's new source rule with Sen. Joe Manchin (D-W.Va.), and will back a separate motion sponsored by Sens. Shelley Moore Capito (R-W.Va.) and Heidi Heitkamp (D-N.D.) that would scuttle the existing power plant rule.

The rule for new power plants would effectively mandate carbon capture and storage technology for new coal-fired generation, while the Clean Power Plan pursues a 32 percent cut in power-sector emissions nationwide through rules that encourage renewable energy use and efficiency over fossil fuels.



"Here's what is lost in this Administration's crusade for ideological purity: the livelihoods of our coal miners and their families," said McConnell in a statement announcing the move. "I have vowed to do all I can to fight back against this Administration on behalf of the thousands of Kentucky coal miners and their families, and this CRA is another tool in that battle."

It's a tool that the House will tap, as well. Rep. Ed Whitfield (R-Ky.) announced today that he would introduce companion resolutions Monday to block both the new and the existing power plant rules.

"Now we've got EPA's cap-and-trade rules, a blueprint for economic disaster, right there in black and white in the *Federal Register*," said Whitfield, who chairs a key Energy and Commerce subcommittee. "Nothing in the Clean Air Act suggests EPA has such sweeping authority to implement this complicated and far-reaching scheme to commandeer each state's electricity system."

The CRA resolutions may not be the only Senate vote on the Clean Power Plan this fall. Capito's bill to permit states to opt out of the rule without fear of a federal implementation plan being imposed could still get floor time, though it is less likely to garner the 60 votes needed to clear the Senate.

Capito said in a statement she'll pursue "all avenues" in combatting the rule, which she said would harm her state's coal industry.

Heitkamp's home state, North Dakota, saw its emissions reduction obligation under the final power plant rule climb from 11 to 45 percent. And the state's posture on the rule became much more aggressive, as did Heitkamp's.

"North Dakota needs flexible, feasible rules if we're going to find a realistic path forward to reduce emissions," said Heitkamp in her statement with Capito. "The EPA regulations on existing power plants don't fit the bill."

The joint resolution with Capito will allow senators like herself to "express their frustration legislatively," she said.

The resolutions will be brought under a law that allows Congress to veto newly final executive actions. The two resolutions could pass the Senate with a simple majority of the vote, but they would still be subject to presidential veto and GOP majorities if both chambers lack the votes to override it.

Still, Republicans hope the timing of the votes in the coming weeks will embarrass the administration as it prepares to send negotiators to Paris next month to hammer out a global climate change agreement. Republicans have warned that foreign officials should not take it for granted that the administration can deliver on its pledges of emissions cuts and aid dollars, because Congress backs neither.

Senate Environment and Public Works Chairman James Inhofe (R-Okla.), a staunch foe of action to curb heat-trapping emissions who plans to attend the Paris confab, said in a statement last night that negotiators huddling in Bonn, Germany, this week should take note of Republicans' attitude toward any deal.

CYBERSECURITY:

Power sector issues warning on Senate amendments

Geof Koss, E&E reporter

Published: Friday, October 23, 2015

A coalition of utility and power grid interests has outlined its opposition to a number of amendments to the Senate cybersecurity bill that it says would undercut the thrust of the legislation.

The Senate on Monday will resume debate on the bill, S. 754, which would grant liability protections to companies that disclose cybersecurity data with the federal government, while also changing the manner in which such intelligence flows between the private and public sectors.

While the power interests say the bill would complement existing public and private efforts to share information about cyberthreats, they urged senators this week to oppose a number of amendments "that would significantly undermine the information sharing incentives and legal protections in the bill or unnecessarily complicate information sharing efforts."

Of primary concern is an amendment by Sen. Patrick Leahy (D-Vt.) that would strike from the bill all references to explicit Freedom of Information Act exemptions covering information sharing on threats and defensive measures.

"Eliminating all specific references to FOIA protections from the bill would have a chilling effect on voluntary information sharing, undermining public-private security partnership efforts and thus potentially

making critical infrastructure more vulnerable to cyber attacks," wrote the American Public Power Association, the Edison Electric Institute, the National Rural Electric Cooperative Association and others.

Also "of particular concern" is an amendment by Sen. Al Franken (D-Minn.) that would narrow the bill's definitions of threats and indicators "in a way that would likely result in more litigation, thus creating another legal disincentive to voluntary information sharing, contrary to the fundamental purpose of the legislation."

The groups are also raising concerns about a handful of other amendments, including a proposal by Sen. Dean Heller (R-Nev.) that would alter the conditions under which nongovernmental entities can "scrub" personal information before sharing it with federal authorities. The coalition says Heller's plan would impose a "more subjective" standard than the underlying bill.

The groups also flag an amendment by Sen. Chris Coons (D-Del.) that would impose additional scrubbing of personal information by the Department of Homeland Security, which power interests say will slow information sharing.

A third amendment establishing scrubbing conditions on information sharing offered by Sen. Ron Wyden (D-Ore.) would cause "legal ambiguity and [create] a disincentive to sharing information."

And an amendment by Sen. Jeff Flake (R-Ariz.) that would sunset the bill's authorization after six years "creates uncertainty and will negatively impact participation," they wrote.

Congress has labored for years to legislate on cybersecurity against a background of ever-growing high-profile cyberattacks. However, legislative attempts to address the issue have stalled over industry concerns with giving the federal government new powers over infrastructure that is privately owned, privacy concerns, and the overlapping of jurisdiction among multiple committees.

The House earlier this year passed two bills addressing information sharing, but one key lawmaker -- House Homeland Security Chairman Michael McCaul (R-Texas) -- this week said the Senate's approach was unlikely to pass muster in the lower chamber (*E&E Daily*, Oct. 21).

Reporter Blake Sobczak contributed.

REGULATIONS:

Enzi bill would allow Congress to clarify agency authority

Ariel Wittenberg, E&E reporter

Published: Friday, October 23, 2015

Legislation filed in the Senate today would allow Congress to circumvent the president when telling an agency it is overstepping statutory authority.

Introduced by Sen. Mike Enzi (R-Wyo.), the Regulatory Authority Clarification Act (S. 2199) would give Congress the ability to clarify agencies' authority using concurrent resolutions, which do not require presidential approval.

Using concurrent resolutions would allow Congress to issue guidance to agencies without having to have a two-thirds majority vote that would be needed to override a potential veto.

The concurrent resolutions would be used to clarify what authority Congress has or has not granted agencies, and could be used to overrule "improper interpretations," Enzi, who chairs the Senate Budget Committee, said in a statement.

The bill states that once a concurrent resolution is passed clarifying whether a previous law delegates certain authority to an agency, the agency would not be allowed to write rules that contradict the resolution and would have to write new rules to "carry out the meaning of the provision, as provided in the concurrent resolution."

Enzi said his bill is justified in part by the "billions of dollars that recent regulations from the EPA and other agencies are predicted to cost the economy."

The GOP-controlled House and Senate are currently grappling with how to prevent EPA's Clean Power Plan from going into effect.

In a speech on the Senate floor yesterday, Enzi criticized the Clean Power Plan, describing it as piling onto an already overburdensome slew of recent regulations, including mercury and air toxic standards, as well as newly tightened ozone limits.

"If all those rules weren't onerous enough, in August the EPA doubled down on its war on coal when it released the final rule of the Clean Power Plan," he said. "The coal industry and businesses that rely on it are facing higher regulatory costs at the same time as energy producers are seeing a tougher market than they have in years, which is a bad combination for economic growth and job creation."

CLEAN POWER PLAN:

EnergyWire's Kuckro talks legal, legislative challenges facing plan, previews McCabe sit-down

Published: Friday, October 23, 2015

After nearly three months of anticipation, U.S. EPA's Clean Power Plan was published in the *Federal Register* today. It's a significant step that tees up a series of legal and legislative challenges. On today's The Cutting Edge, *EnergyWire* reporter Rod Kuckro discusses the road ahead for the plan and previews his sit-down interview with acting EPA air chief Janet McCabe.

Subject: FW: NAR vehicles for WOB, Germany: next batch JFK

Hello Byron and Linc,

Volkswagen of America has been procuring various generation 2009 – 2014 2.0L TDI vehicles at the request of VWAG. These vehicles are being returned to Germany for testing purposes as the recall remedies are being evaluated. If you see the email string that follows, legal wanted me to provide notice to the EPA that these vehicles were being procured and exported back to Germany.

I'm not sure this is necessary and I realize you are probably not involved in this type of activity, but you are my point of contact for providing the agency with information.

This may be an initial shipment - it is my understanding up to 40 vehicles total may be sent back to Germany as part of the ongoing test program.

Please let me know if there are any additional requirements or information needed to take this action. I intend to notify the staff below that you have been notified and to proceed with shipping the vehicles.

Thank you and best regards,

Ex. 7 See below. As discussed, we believe these vehicles are okay to export, but recommend a "heads-up" to EPA. Can you take care of that?

Once that notice has been given, please let us know and then Pat's team can proceed.

Thanks.

Yes, this is what I was told by the business. My customs team was contacted to assist in the export of these vehicles. We want to make sure there is no legal conflict with these shipments. Please note that our first export is scheduled for this Friday and it will take time to process once we are confirmed – so there is an urgency to this request or these shipments will be delayed.

Are these being sent to Germany for testing related to a "fix"? Is this something that's done in the ordinary course?

I am checking with our outside experts, but I anticipate they will need some background info.

Hi all,

seven vehicles for the next shipment to JFK and eventually Germany have been identified. They will be moved to auction Manheim, PA before they will be transported to JFK.

Vehicles for EA division

No	Carline	MYVIN	Transmission	Source	Current Location	Title	Shipping Date	Departure	Arrival	comments
15	Jetta	13	Ex. 6		JFK, NY	yes				Vehicle still at JFK, title available now
18	Passat	13			Manheim Pennsylvania	yes				

Vehicles for EE division

No	Carline	MYVIN	Transmission	Source	Current Location	Title	Shipping Date	Departure	Arrival	comments

				Date	
3 Jetta	13	[redacted]	anheim Illinois	yes	To be moved to Manheim, PA
4 Golf A6	10	[redacted]	DESA Boston	yes	To be moved to Manheim, PA
	14				
6 Audi A3	10	[redacted]	anheim New	yes	To be moved to Manheim, PA
	13		rsey		
7 Beetle	13	[redacted]	anheim Atlanta	yes	To be moved to Manheim, PA
8 Beetle	13/	[redacted]	uburn Hills	yes	To be moved to Manheim, PA
Convertible			Car		

Ex. 6

Ex. 7 Is the broker the same one as in the last shipment? Who is the contact person for the titles this time?

Ex. 7 Could you please provide a pro forma invoice for the VINs above?

Ex. 7 Could you provide an ETA for Manheim, PA? Please let us know when the vehicles arrived at the auction in PA.

Thank you very much

Ex. 7

Best regards / Mit freundlichen Grüßen

VW fooled everyone. Was it the only one?

by Erika Fry @ErikaFry OCTOBER 26, 2015, 10:00 AM EDT

The sustainability movement faces an existential crisis.

In early September the Dow Jones Sustainability Index (DJSI) crowned Volkswagen VLKAY 1.97% the world's most sustainable car company. The German automaker issued a press release celebrating the title and its high marks—91 out of 100—on the Corporate Sustainability Assessment, a lengthy survey of corporate behaviors. It scored perfects on "codes of conduct, compliance, and anti-corruption as well as innovation management [and] climate strategy." Then-CEO Martin Winterkorn called the win a "great success for the entire team."

Just 10 days later, of course, he issued an apology for what turned out to be his company's profound lack of all of the above; by the end of the month, he had stepped down.

How did an emissions cheat land atop the world's longest-running and, per Rate the Raters, most credible of corporate sustainability indexes? Or for that matter, place first on Boston Consulting Group's Brand Advocacy Index? Or fool everyone, from the EPA down to the earth-loving Jetta driver, that VW was a car company as clean and green as they come?

Mostly, by saying all the right things. Yes, VW rigged its software—but despite all the box-checking, testing and indexing that put VW in such good stead, there wasn't much to trip it up: the influential DJSI, like others of its kind, relies on data that companies themselves provide.

"All of this data is still imperfect. It can be gamed—especially if you're willfully gaming it," says Chris Guenther, Research Director at SustainAbility, a green consulting firm that runs the "Rate the Raters" survey. He's still stunned by VW's stunt and says it has prompted soul-searching in the field. "Fundamentally this is about assurance and how rigorously we interrogate questions like this. This will reverberate for a long time."

Indeed, work is already underway. VW was removed from the DJSI shortly after news of the scandal broke, and RobecoSAM, the firm that does the index's number-crunching is reviewing the questions it asks corporations. Emissions testing, in the US and the EU, is under review too. If the efforts are successful, VW may not be the last to get caught gaming the system.

Automotive News:

http://www.autonews.com/article/20151026/RETAIL04/310269960/price-drops-on-used--vw-diesels-gather-speed

Price drops on used VW diesels gather speed

Values will stay volatile until emissions fix is found

Tim Fleming, KBB analyst: "Some auctions are still holding off on selling the affected Volkswagen inventory."

October 26, 2015 - 12:01 am ET

WASHINGTON -- Prices for used Volkswagen diesels have accelerated their decline as the automaker's emissions scandal entered its second month with no definitive word from VW on its repair plans.

Moreover, the actual volume of used VW diesels sold at auction has plummeted, making it tough for analysts to get a clear sense of just how severely the scandal will hit the value of the affected cars.

Analysts say the value of used VW diesels will continue to be volatile until it's known how VW will fix the cars and what the effects of those fixes will be on fuel economy and vehicle performance. Time is of the essence, they say, because the scandal is also beginning to have spillover effects on used prices of VW's gasoline models.

Compared with levels before Sept. 18, when the EPA announced VW's violations, wholesale prices on Jetta TDIs were off 7.9 percent as of Oct. 12 and down 13.8 percent as of Oct. 19, according to data from Black Book, which tracks used-car prices at auctions. Passat TDI price declines accelerated from 7.9 percent to 13.5 percent in the same period, while Golf TDI price declines went from 5 percent to 8.7 percent.

Kelley Blue Book is finding a similar trend, with average auction price declines widening from down 13 percent two weeks after the scandal broke to down nearly 16 percent through Oct. 16. Average auction prices for gasoline-powered VW models declined by 2.9 percent in the same period.

"Some auctions are still holding off on selling the affected Volkswagen inventory," KBB analyst Tim Fleming said in a statement last week. "While Volkswagen diesel auction prices are in decline, we could see larger fluctuations depending on how this inventory is handled."

Fleming said auction volume of affected VW diesels declined about 25 percent in the last month. Auction houses are holding many used VW diesels controlled by VW Credit in storage, he said. Used diesels that are being offered for sale are coming from independent owners, he said, and those units are seeing little or no bidding activity.

The National Automobile Dealers Association, in its October report on the used-car market, said that auction volumes of diesel-powered Jetta, Golf and Beetle models were down 28 percent, while Passat diesel sales were down 33 percent in the two-week period ending Oct. 3, compared with the four-week average prior to the EPA's announcement.

Likewise, Black Book's values are based on scant auction activity, says Anil Goyal, vice president of automotive valuation and analytics with Black Book. Just one or two VW diesels from a given model year have passed through auctions each week on average since Sept. 18, down from roughly 10 to 12 a week prior to the disclosure.

"It's difficult to track those trends because there's not a lot of information around it," Goyal said.

Matthew Welch, general manager of Auburn Volkswagen near Seattle, says he's able to absorb the lower values for now since used-vehicle values always fluctuate week to week.

Unlike some dealers, Welch is accepting trade-ins of diesel VWs affected by the scandal. He says he has used some of the discretionary funds provided this month by Volkswagen of America to pad trade-in allowances on the TDIs.

"So far we've made the decision to keep taking cars on trade, and we give them the value closer to what it was a month ago," Welch said.

Green Car Reports:

http://www.greencarreports.com/news/1100610_vw-newest-diesel-engines-had-no-defeat-software-legal-in-europe

VW: Newest Diesel Engines Had No 'Defeat' Software, Legal In Europe

By John Voelcker

One of the many complications of the VW diesel emission scandal is that the 482,000 affected cars in the U.S. encompass three different types of engine and emission-control system.

In Germany, Volkswagen has investigated its newest generation of 2.0-liter diesel engines to find out if they too include the "defeat device" software that allowed the cars to bypass emission controls in real-world use.

Yesterday, the company issued a statement saying that those engines--named EA288--do not have that software installed in their European versions.

Therefore, VW's statement said, cars with EA288 engines designed to meet both Euro 5 and Euro 6 emission standards "comply with legal requirements and environmental standards" within the European Union.

Euro 5 standards, in effect from 2006 through last year, are roughly equivalent to U.S. standards in effect through 2007. The tougher Euro 6 limits that came into effect this year are similar to U.S. standards that have now been in place since 2008.

2016 Volkswagen Beetle TDI Convertible2016 Volkswagen Beetle TDI Convertible

The company is investigating roughly 11 million diesel vehicles altogether, including 2.4 million sold in Germany.

This announcement does not, however, get cars with that engine off the hook in the U.S.

They include all 2015 TDI models of the Golf, Golf SportWagen, Jetta, Passat, and Beetle already sold, as well as the 2016 models that the EPA has refused to certify for sale.

That's because VW recently told the EPA that those cars have a second piece of software that could affects their emissions as well.

2015 Volkswagen Passat TDI2015 Volkswagen Passat TDI

It apparently functions to warm up some part of the exhaust emission treatment system; carmakers must disclose such devices to the EPA during the certification process so the agency can evaluate and test them if necessary.

The EPA said last week it has a "long list" of questions about that software, and plans to test VW's 2016 diesel vehicles extensively to understand exactly how they behave--and what they emit--in real-world use.

The company's translated release says, in typically stilted fashion, "After thorough examination it is now confirmed that no software constituting an improper defeat device as defined in law is installed in vehicles with EA 288 EU5-engines."

What constitutes an "improper defeat device" under EU law may differ from what the EPA considers to be problematic software, but the agency now appears to be deep into its investigation of those issues.

2015 Volkswagen Golf TDI SE2015 Volkswagen Golf TDI SE

While VW's North American unit had hoped that its 2016 models could be certified for sale in a matter of weeks--while it develops fixes for the earlier vehicles on the road--it now appears that the certification may take considerably longer.

Volkswagen dealers cannot sell 2015 or 2016 2.0-liter TDI vehicles, either new or used, and some are reportedly worried about running out of cars. October sales reports should provide a better picture of any such problems.

Fixing the new EA288 diesel engines is still expected to be the easiest task VW faces in the U.S., however, likely involving only a software update.

The company no doubt hopes that 2012-2015 Passat TDIs, which are fitted with the earlier EA189 engine but also have a urea-based Selective Catalytic Reduction aftertreatment system, will also require only software changes.

2014 Volkswagen Passat TDI2014 Volkswagen Passat TDI

But the bulk of the U.S. 2.0-liter TDI cars--325,000 of them--have the older EA189 engine and no urea system.

They will be both the hardest and the most expensive to retrofit, assuming the EPA approves a plan to do so. Analysts expect that VW may simply have to buy back some of those vehicles.

Green car Reports:

http://www.greencarreports.com/news/1100635_u-s-emission-tests-are-unrealistic-but-european-testing-is-far-worse

U.S. Emission Tests Are Unrealistic, But European Testing Is Far Worse

By Stephen Edelstein

The ongoing Volkswagen diesel-emissions scandal has, to say the least, exposed weaknesses in the U.S. Environmental Protection Agency (EPA) testing regime.

VW was able to get away with installing "cheat" software on 482,000 cars from model years 2009 to 2015.

But it wasn't until independent researchers tested one of these cars that the deception was discovered.

DON'T MISS: Why Did Volkswagen Cheat On Diesel Emissions In Its TDI Cars?

Still, it appears that it could have been worse. While U.S. emission tests are based on very gentle, 40-year-old driving cycles, the emission limits carmakers must meet are tougher.

European emissions-testing standards not only offer greater opportunities for cheating, they're also worse at predicting real-world emissions and fuel efficiency, according to the Economist (registration may be required).

The European Union is less stringent about nitrogen-oxide (NOx) emissions than the U.S., instead focusing more on fuel economy and carbon-dioxide emissions.

2014 Volkswagen Jetta SportWagen2014 Volkswagen Jetta SportWagen

While standards for those factors in Europe are reportedly very tough, they don't bear much resemblance to what cars return in real-world use.

The difference between rated fuel economy and what drivers are actually seeing has grown to 40 percent in recent years, says green advocacy group Transport & Environment.

Indeed, European fuel-economy ratings tend to be much more optimistic than U.S. EPA ratings.

ALSO SEE: European Makers: NOx Limits Must Rise For Real-World Emissions Tests

In part, that's because the EPA applies numerous "adjustment factors" to the raw emission-test datato create window-sticker fuel-economy ratings that roughly resemble reality.

Further, there are reportedly even greater opportunities for cheating in Europe than the U.S.

In the U.S., carmakers test their own cars and then submit the results to the EPA, which also audits results by testing a handful of cars itself each year.

2014 Volkswagen Jetta SportWagen2014 Volkswagen Jetta SportWagen

In Europe, testing is contracted out to private firms, which compete for carmakers' business.

That appears to create an incentive to doctor test results to keep clients happy--including modifying test cars.

Items such as sound systems are removed to lower weight, mirrors are removed, and gaps between body panels taped to reduce drag, reports the Economist.

MORE: Will European Fuel-Efficiency Tests Get More Realistic Under New Rules? (Jul 2014)

Tires can also reportedly be over-inflated, alternators disconnected, and cars run only in very high gears.

While its resources are limited by budgetary concerns, the EPA can conduct tests of its own to catch cheating like this--and levy fines.

In 2014, it fined Hyundai and Kia a total of $300 million for misstating fuel economy; Ford subsequently restated mileage figures for six of its cars. This generally does not happen in

Europe.

2016 Volkswagen Beetle TDI Convertible2016 Volkswagen Beetle TDI Convertible

Volkswagen's cheating in the U.S. was the result of a pattern of behavior the "European system created," said David Kodjak of the International Council on Clean Transportation, the organization largely responsible for uncovering the carmaker's cheating.

Europe is considering stricter testing standards, which could be enacted as early as 2017.

In response to the VW scandal, PSA Peugeot Citroën also says that it will begin publishing real-world fuel-economy test results, according to Automotive News Europe.

The information will be compiled by an independent body, and should be available next spring, the carmaker says.

The Roanoke Times:

http://www.roanoke.com/opinion/commentary/lindholm-putting-volkswagen-s-dirty-cheater-diesels-in-perspective/article_acac6826-106c-52f8-916b-c43de09d29e6.html

Lindholm: Putting Volkswagen's 'dirty cheater' diesels in perspective

Posted: Sunday, October 25, 2015 2:00 am

By Brian Lindholm

Volkswagen made the news in a bad way recently, when the company admitted to placing software in its diesel engines that made them run cleaner when being tested, but allowing more pollution when being driven normally. The specific pollutants are nitrogen oxides (NOx), which

are a precursor to ground-level ozone (O3), a highly reactive compound that impairs lung function and exacerbates a broad range of health problems. VW's reputation took a tremendous hit, but how much harm did the additional pollution actually cause? Let's look at that.

The EPA's "Tier 2" emissions rules went into full effect in 2009, requiring that diesel cars and light trucks emit no more than 0.07 grams of NOx per mile. With the software "cheat" enabled, VW's cars typically emitted 20 times that amount, or about 1.4 grams/mile. This seems like a lot, but it's worth noting that the typical gasoline-based car of 1967 emitted a whopping 20.8 g/mile of NOx. Even in "dirty cheater" mode, a modern Volkwagen diesel produces 93 percent less NOx than a gasoline classic from the '60s. Yet the EPA declares this insufficient and demands 99.6 percent less instead. Are these tremendously tighter standards worth it? Let's look at the numbers.

If 482,000 cars with 1967-grade emissions are each driven 11,300 miles per year, those cars will generate about 125,000 tons of NOx per year. If they are VW "dirty cheaters," they'll produce around 8,400 tons (a reduction of about 116,500). And if they are fully compliant diesels, they'll produce merely 400 tons (a reduction of about 8,000 relative to the "cheaters"). How much benefit does that last 8,000 ton reduction yield?

Research at MIT, the NIH and the EPA indicate that every thousand tons of NOx emissions causes two premature deaths. The 8,000 extra tons per year therefore causes 16 extra deaths. This is comparable to GM's faulty ignition switches killing more than 120 people over the course of a decade.

On the other hand, every year Volkswagen's 482,000 "dirty cheater" diesels save their owners more than $110 million in fuel costs and produce nearly 400,000 fewer tons of carbon dioxide (CO2). Does this help? Well, back in 2012, the Centers for Disease Control did an extensive study on the deleterious health effects of poverty, determining that every hundred dollars of lost income increased the chances of a premature death in the household by 15 parts in a million. This happens mainly because reduced income increases the chances of a lower-quality diet and skipped medical care. The opposite is also true. Increased income is beneficial to health. Indeed, if you can increase the income of a community by $6.6 million, you will (on average) prevent one premature death. The $110 million in annual fuel savings achieved by Volkwagen's diesels is enough to prevent approximately 18 premature deaths per year. This cancels out the deaths caused by the increased NOx entirely.

And from a global warming standpoint, there's more. The EPA currently estimates the "social cost of carbon" to be about $40 per ton. Reducing CO2 emissions by 400,000 tons provides $16 million in social benefit, preventing about 2.4 deaths per year.

So if you own a Volkswagen diesel and are feeling blue, chin up. It's no more harmful to people than the gasoline counterpart, even when running in "dirty cheater" mode. So does this mean that VW is off the hook?

Alas, it is not. While the true health impact of VW's transgression is quite minimal, it intentionally deceived regulators and customers in order to gain competitive advantage. It's a shocking breach of ethics. From a truth-in-advertising standpoint alone, the EPA should impose fines, and criminal charges should strongly be considered.

But while the government considers its response, officials might also consider the wisdom of such extraordinarily tight regulations. This 0.07 g/mile has proven difficult to achieve and saves very few lives, if any at all. Indeed, VW's excess 8,000 tons of NOx is utterly dwarfed by the 145,000 tons that forest fires typically produce per year. How much cleaner than Mother Nature do we really need to be?

To prevent premature deaths, we'd get vastly more benefit by focusing on trans fats (about 7,000 premature deaths per year), pollution in the form of particulates (about 170,000 premature deaths), or smoking (about 480,000 premature deaths, 8 percent of which are secondhand). Heck, if somebody with the FDA invented a better cigarette filter that prevented a mere 1 percent of smoking deaths, they'd make up for VW's sin 300 times over!

Telegraph UK:

http://www.telegraph.co.uk/news/uknews/road-and-rail-transport/11952066/VW-owners-could-fail-MOTs-if-they-ignore-recall.html

VW owners could fail MOTs if they ignore recall

Patrick McLoughlin, the Transport select committee, is considering plans to change MOT tests if people fail to respond to Volkswagen's recall in wake of diesel emissions scandal

Volkswagen has announced the recall of 1.2million cars

By Steven Swinford, Deputy Political Editor10:00PM BST 23 Oct 2015

Volkswagen owners who ignore the recall of their vehicles following the diesel emissions scandal could fail their MOTs under plans being considered by ministers.

The German car company has announced that up to 1.2million vehicles will be recalled to remove "defeat devices", software that allows cars to cheat emissions tests, and ensure their engines meet emissions standards.

MPs and campaigners have raised concerns that motorists will fail to respond to the recall and continue to drive vehicles which emit unsafe levels of nitrogen dioxide.

Patrick McLoughlin, the Transport Secretary, is considering changing the MOT test next year so that affected Volkswagen cars are barred from the road unless they have been recalled.

He told MPs that if there is a "wider problem" and people fail to return their vehicles he will consider changing MOT tests to ensure that "cars are operating legally and correctly".

It comes after Robert Flello, a Labour MP and member of the transport select committee, raised concerns that some people may choose not to respond to the recall amid fears that they could damage their car's performance.

A Volkswagen logo on a vehicle in a staff parking lot at the VW plant in Wolfsburg, Germany

He told The Daily Telegraph: "The whole point is to cut down on pollution which car owners

will be exposed to, along with the general public.

"Nitrogen dioxide is a killer. This work has to be done on people's cars for the good of the environment.

"But if a motorist decides that they are not going to take in their car because they might get fewer miles to the gallon then at present there is nothing to stop them."

Mr Flello suggested during a meeting of the transport select committee earlier this month that MOT's should be "invalidated" if people fail to respond to the Volkswagen recall.

Mr McLoughlin said: "Mr Flello, you make a point there and it is something I will reflect on. I think most people will want to ensure their cars are operating legally and correctly, but if it becomes a wider problem once we start he recall I will consider it."

The recall, the biggest in history, is due to start in January next year and could take up to two years to complete.

Earlier this year Volkswagen revealed that it equipped 11 million diesel vehicles worldwide with software that switches the engine to a low-emissions mode during tests.

Cars affected in the UK include VW passenger cars and vans as well as those manufactured by other VW-owned brands Audi, Seat and Skoda.

Stephen Joseph, head of the Campaign for Better Transport, said: "The problem is that we are in completely unchartered waters. I don't think anybody knows what to do here.

"I think what's still becoming clear is that the emerging health evidence of the damage done by vehicle exhausts is getting stronger.

"Just because you can't see it doesn't mean it isn't doing damage. We have to make a choice between clean air and having to drive around polluting vehicles.

"Using the MOT test as a way of getting compliance may have to happen to get cleaner vehicles."

Close to 1.2 million vehicles are affected in the UK with recalls due to start in the first quarter of next year for remedial work.

Paul Willis, the UK head of VW, said it was "implausible" and "absolutely inconceivable" that there was any deliberate attempt to mislead people, adding: "I reject the accusation that we've been lying as an industry."A source close to Mr McLoughlin said: "We expect Volkwagen to foot the bill for their actions. Clearly their recall must be satisfactory for drivers. Our guiding principle has always been that customers should not be out of pocket or penalised."

Deutsche Welle:

Emissions scandal shows EU failings, but reform elusive

The Volkswagen scandal has exposed the fact that EU rules on car emissions are not being enforced and that test procedures don't reflect reality. Next week will see changes to that system - but not substantial ones.

exhaust fumes

Elsbieta Bienkowska did not mince words when reacting to the revelations that Volkswagen had manipulated emissions.

"Our message is clear: zero tolerance on fraud and rigorous compliance with EU rules," said Bienkowska, the EU's industry commissioner.

The words came in the wake of "dieselgate," in which the US Environmental Protection Agency exposed that German carmaker Volkswagen had used software to manipulate emissions readings of diesel cars to meet EPA regulations.

Volkswagen later admitted to having used the software in 11 million sold all over the world.

But environmental activists paint a picture that shows not-so-rigorous compliance with EU legislation on car emissions - and a lot of tolerance for that.

Rules that are not followed

EU legislation on the subject dates back several years, to 2007. It states the importance of reducing vehicle emissions to achieve such air-quality objectives as "reducing harmful effects on human health."

There were 430,000 premature deaths in EU member states in 2011 because of bad air, according to the European Environment Agency.

The 2007 emissions regulation prohibits "the use of defeat devices that reduce the effectiveness of emission control systems" and mandates that by 2009 EU member states introduce penalties to impose on manufacturers who flout the law.

Industry Commissioner Elsbieta Bienkowska said there would be no tolerance for fraud.

So far, not a single member state has introduced such penalties.

Nor have there been any investigations into defeat devices - though a 2013 report by the European Commission's Joint Research Center was only one example detailing the possibility that such devices could exist and be used to activate emissions control systems.

"Years have passed, but the European Commission hasn't taken any action," says Axel Friedrich, who used to head up a department at Germany's Federal Environment Agency and now works as a consultant.

He says the Commission has shown itself capable of taking action to ensure compliance with its regulations and directives in other matters - for instance, by taking member states to the European Court of Justice or opening infringement procedures for air pollution.

Earlier this month Gerben-Jan Gerbrandy, a Dutch member of the European Parliament's liberal bloc, also asked why no investigations and infringement procedures had been launched with regard to violations of emission limits.

Representatives say, though, that the Commission established a working group to develop a new procedure to reflect emissions on the road rather than tests done under lab conditions back in 2011.

Powerful automotive lobby

Friedrich says there is a simple explanation of why the Commission has not been more active in enforcing the regulations: Relations between the car industry and politics are too close - both in Germany and in Brussels.

According to the Corporate Europe Observatory, a campaign group that aims to expose the influence by corporations and lobby groups on EU policymaking, the car lobby is one of the most powerful in Brussels, spending about 18 million euros in 2014 to influence climate, energy, trade and transport policy.

Aside from the question of political will, there is that of political power. The European Union has no equivalent of the EPA. In order to sell cars in the United States, manufacturers must demonstrate compliance with the Clean Air Act and EPA regulations; in Europem, manufacturers can choose a member state in which to seek certification.

Feinstaub Luftverschmutzung Messung Berlin

Axel Friedrich started out as a technical chemist and is passionate about measuring - and reducing - emissions.

"We have 28 European agencies for certification," Friedrich says. "They compete with each other. And if one manufacturer has problems getting a car certified, he just takes it to another country."

Once a car type has been approved by one EU member state, that decision applies to the other 27 countries.

Yet, Friedrich says, creating a European agency to control compliance with emission regulations is not the way to go.

"I think there should be control of the national authorities instead," he says, arguing that car emissions are an environmental problem that responsible national agencies should be in charge of.

In the case of Germany, certification is in the hands of the Federal Motor Transport Authority. Friedrich's former employer, on the other hand, the Federal Environment Authority, "only has the power to admonish politicians: It can't recall cars."

Commission to introduce new test procedures

Though changes to national certification procedures do not appear imminent, the European Commission is in the process of overhauling test procedures.

Following years of consultations, the Commission is set to come forth on October 26 with a new regulation introducing a "real driving emission" test that better reflects normal conditions of use than lab procedures do.

The new test procedures, to be implemented in January, will involve a device to measure emissions attached to the rear of the car.

Testvorrichtung für Abgasrest im Realbetrieb Real drive emissions RED

The real drive emissions test

In the initial phase, these new devices will only be used for monitoring purposes; they measure will not have an impact on certification.

Also, emission limits will be raised for this transition period, meaning that instead of the 80 milligrams of nitrogen oxides allowed to be emitted per kilometer (0.13 grams per mile) under the Euro 6 norm, cars will be allowed to emit more.

How long that first phase will last and by what factor emission limits will be raised is still being debated.

Friedrich calls the new test a step in the right direction - but only a very small step.

"Why do road tests and lab tests when you know lab tests won't show you real-life emissions?" he asks.

The only way to get test results that reflect reality is to test randomly, he says, like the EPA does in the United States.

However the European Union improves test procedures in the near future, enforcing emission limits appears likely to remain a sore spot for some time to come.

Chamber: Obama, EPA putting Paris 'ambition' ahead of law

By Kevin Rogers

In its zeal to present the "strongest hand possible" at the upcoming United Nations-sponsored climate negotiations, the Obama administration finalized a "radical transformation of the entire energy sector," knowing that it might not pass legal muster, the Chamber of Commerce's top energy official charged Monday.

"In the administration's own words, they want to march into Paris with the strongest hand

possible." Karen Harbert, president and CEO of the Chamber's Institute for 21st Century Energy, said. "Implementing a transformation of the entire electric sector certainly gives one the appearance of a strong hand, albeit the fact that this is going to be litigated for a number of years."

Asked to respond, EPA spokeswoman Melissa Harrison said the rule is "grounded firmly in science and the law and is fair, flexible, and affordable."

"I do think it's fair to say that there's a political aspiration here to show leadership in Paris and to encourage or coerce other countries to follow suit," Harbert said.

The Clean Power Plan, which seeks to cut power sector emissions by 32 percent by 2030, based on a 2005 baseline, includes rules for existing and new power plants. It's a key component of the administration's pledge to cut overall U.S. emissions by up to 28 percent from 2005 levels and achieve those reductions by 2025.

The climate negotiations, set to kick off on November 30, seek a deal that would cut emissions enough to keep average global temperatures from rising 2 degrees Celsius from pre-industrial levels. The Intergovernmental Panel on Climate Change projects that the world could exceed that threshold by 2050, absent strong action, and predicts that doing so could lead to irreversible damage to the planet.

While the rule for new fossil fuel plants has hard emissions limits, the rule for existing plants, while requiring states to hit specific carbon reduction targets, gives them the flexibility to achieve the cuts through a combination of steps, including improving the efficiency of coal-fired plants, converting them to natural gas, or installing new renewable energy capacity.

The Chamber, along with 15 other trade associations, on Friday sued the agency over the existing plant rule, petitioning a U.S. appeals court to temporarily stop its implementation, saying they would suffer irreparable harm if the rule takes effect. Other industry groups, private companies and 26 states filed separate suits against the regulations.

They contend that the agency is illegally double-regulating power plants under two different sections of the Clean Air Act, and that the regulations unlawfully force states to alter their energy mixes.

The National Association of Manufacturers, which joined the Chamber suit, said the administration was misusing the Clean Air Act to press its international agenda.

"The Clean Air Act wasn't designed as a tool for climate negotiations," Linda Kelly, the group's senior vice president and general counsel, said. "We have to make sure that the agency is acting within the bounds of its regulatory authority, which it is not here."

Joanne Spalding, the chief climate counsel for the Sierra Club, said the groups were stretching for arguments.

"It's wishful thinking," she said. "This rule has been in the works for years, and EPA has been carefully constructing it with input from stakeholders across the spectrum."

She also dismissed the likelihood of plaintiffs winning a stay of the rule, despite the large coalition of states and groups petitioning for one.

"I do think that the court will be looking at if the petitioners have actually demonstrated what they need to demonstrate in order to get a stay and not the number of petitioners that are before the court," she said. "EPA is on firm ground in its legal authority to issue the Clean Power Plan."

To obtain a stay, the plaintiffs would have to prove they would suffer "irreparable harm" by implementing the rules; that the harm would outweigh the damage done by not implementing the rules; and that they would likely succeed on the merits of their arguments.

Harlow said the harm from immediately implementing the regulations is clear enough for a stay, since, as the rule is implemented, states will have to begin making decisions on implementation plans ahead of their first draft deadline in September 2016. She also said the rule would raise electricity prices, cost jobs in the mining and power sectors, and make manufacturing more expensive.

"It is our view that the rule will impose significant harm on a broad cross-section of American industry," she said.

Spalding said she was skeptical that the plaintiffs could make that case, noting that states would have up to three years to submit final plans, and that those plans wouldn't go into effect until 2022.

"Given the lengthy timeframe EPA has adopted in the final rule, they really can't show irreparable harm," she said.

Whitfield files resolutions to overturn carbon rules

By Kevin Rogers

Rep. Ed Whitfield, R-Ky., on Monday took the first step toward a congressional effort to overturn the Environmental Protection Agency's power plant carbon rules, introducing a pair of resolutions to block the regulations for new and existing fossil fuel power plants.

Sponsored Links

Whitfield, chairman of the House Energy and Commerce Subcommittee on Energy and Power, said EPA's rules were illegal and would have disastrous economic effects if implemented. The resolutions are issued under the Congressional Review Act, which gives Congress a 60-day window to weigh in on published regulations.

"There's nothing in the Clean Air Act that authorizes EPA to implement these unprecedented rules," he said in a statement. "These resolutions stand up for ratepayers, jobs, and affordable energy in Kentucky and throughout the country."

The resolutions would have to be approved by both chambers of Congress and signed by President Barack Obama. The House would need 290 votes to overturn a likely veto, while the Senate would need 67 votes.

Senate Majority Leader Mitch McConnell, R-Ky., and supporters plan to issue their own resolutions against the regulations this week.

Coal mine expansion stalls in lawsuit citing climate change

By Matthew Brown

BILLINGS, Mont. (AP) — The U.S. Interior Department should not have approved the expansion of a southeastern Montana coal mine before taking a closer look at its effect on the environment, a federal judge said about a lawsuit arguing the government ignored coal's contributions to climate change.

Environmental groups sued the Interior Department after it approved an expansion of the Spring Creek Coal mine in 2012. The case marks the second time conservationists have used worries over climate change to successfully challenge approval of a coal mine after it had been granted.

But unlike in the previous case involving Colorado mines, U.S. Magistrate Judge Carolyn Ostby did not explicitly name climate change as a factor in her decision issued Friday. She instead referred more broadly to "air quality" concerns, saying the government had failed to explain its thinking on the issue before granting approval.

Ostby said work at the mine near Decker will not be shut down immediately. Rather, the judge recommended that federal officials reconsider the environmental effects of the expansion by Wyoming-based Cloud Peak Energy. The mine, which employs about 260 people, is allowed to continue operating in the meantime.

World's Catholic bishops issue appeal to Paris climate talks

By Nicole Winfield

VATICAN CITY (AP) — Catholic patriarchs, cardinals and bishops representing five continents on Monday appealed to climate negotiators to approve a "transformative" and fair, legally binding agreement that sets global temperature limits and goals for eliminating fossil-fuel emissions.

Representatives of bishops' conferences from around the globe signed the appeal in a renewed push to encourage climate negotiators meeting in Paris next month to heed Pope Francis' call to protect God's creation and the poor who suffer most from its exploitation.

The church's 10-point proposal calls for governments to approve legally binding limits to global average temperatures, set a mid-century goal for phasing out emissions from fossil fuels and provide binding and ambitious mitigation commitments that recognize the different responsibilities for, and abilities to adapt to, global warming.

No precise temperature limit was proposed in the appeal. Indian Cardinal Oswald Gracias, who heads the Asian bishops' conference, suggested the omission was a compromise designed to ensure all bishops could sign onto the appeal, which is the first of its kind for the episcopal conferences from each of the five continents.

An intolerable unimaginable heat forecast for Persian Gulf

By Seth Borenstein

WASHINGTON (AP) — If carbon dioxide emissions continue at their current pace, by the end of century parts of the Persian Gulf will sometimes be just too hot for the human body to tolerate, a new study says.

How hot? The heat index — which combines heat and humidity — may hit 165 to 170 degrees (74 to 77 Celsius) for at least six hours, according to numerous computer simulations in the new study. That's so hot that the human body can't get rid of heat. The elderly and ill are hurt most by current heat waves, but the future is expected to be so hot that healthy, fit people would be endangered, health experts say.

"You can go to a wet sauna and put the temperature up to 35 (Celsius or 95 degrees Fahrenheit) or so. You can bear it for a while, now think of that at an extended exposure" of

six or more hours, said study co-author Elfatih Eltahir, an MIT environmental engineering professor.

While humans have been around, Earth has not seen that type of prolonged, oppressive combination of heat and humidity, Eltahir said. But with the unique geography and climate of the Persian Gulf and increased warming projected if heat-trapping gas emissions continue to rise at current rates, it will happen every decade or so by the end of the century, according to the study published Monday in the journal Nature Climate Change.

EPA: Remedy to landfill fire won't come before 2017

By Jim Suhr

ST. LOUIS (AP) — An Environmental Protection Agency administrator says a plan to make sure an underground suburban St. Louis landfill fire doesn't reach a buried cache of nearby Cold War-era nuclear waste won't come before the end of next year.

As acting chief of the EPA region that includes Missouri, Mark Hague also told reporters Monday that the public isn't in any immediate danger from embers smoldering below the Bridgeton Landfill. He says that fire is still 1,000 feet from the nuclear waste at the West Lake Landfill.

Missouri Attorney General Chris Koster on Sunday again called on the EPA to figure out "without delay" how to keep the smoldering underground garbage away from the nuclear waste.

Hague says any EPA fix won't be rushed and will be based on the best science.

A message from America's Natural Gas Alliance

Clean is Powerful. Natural gas helps Georgia Power's plant generate electricity with 50% fewer emissions. Think about it.

Halting leak near sunken Lake Erie barge poses big challenge

By John Seewer

TOLEDO, Ohio (AP) — The U.S. Coast Guard is leading efforts to find a leak of what it believes is a petroleum-based substance coming from a sunken barge on the bottom of Lake Erie near the U.S.-Canadian border.

What makes that so challenging goes beyond just the location of the wreckage.

Among the questions — what is leaking, where is it coming from, how much remains and is there anything else that could a pose a danger on the recently discovered tanker barge 45 feet below the lake's surface.

—

THE WRECKAGE

While the barge's identity is uncertain, shipwreck hunters and the Coast Guard suspect it's the Argo, among 87 shipwrecks on a federal registry created two years ago to identify the most serious pollution threats to U.S. waters. The Argo is among five such wrecks within the Great Lakes but is the only one whose location hasn't been confirmed.

New way to bet on oil wipes out billions in investor savings

By Bernard Condon

NEW YORK (AP) — When Karen Robinson's husband died, she worried she wouldn't have enough money to raise her two young girls and save for retirement.

Then she met a financial planner, Tom Parks, who told her about investment partnerships that would allow her to ride the boom in U.S. oil and gas production while receiving a steady stream of payments to help pay her bills.

"He showed me this picture of the United States, and said they were getting oil out of shale, and energy was the way to go," says Robinson, a high school teacher from Cranfills Gap, Texas. She liked that Parks seemed so confident. "I trusted him."

Two years later, her partnerships have plunged in value and Robinson has lost more than half of the $202,000 she invested, according to a complaint filed with regulators against Parks and his firm, Ameriprise Financial Services. Parks did not return phone calls and emails; Ameriprise declined to comment.

Duke Energy buying Piedmont Natural Gas $4.9B

By The Associated Press

CHARLOTTE, N.C. (AP) — Duke Energy will spend about $4.9 billion in cash to acquire Piedmont Natural Gas, adding about a million new customers in the Carolinas and Tennessee.

The Charlotte, North Carolina, companies are key partners in the $5 billion Atlantic Coast Pipeline that will be the first major natural gas pipeline to serve the eastern part of the state.

Piedmont shareholders will receive $60 in cash for each share of common stock. That's a 42 percent premium to Friday's closing price. Duke Energy Corp. will also assume approximately $1.8 billion in Piedmont debt.

Piedmont will keep its name and maintain its headquarters in Charlotte, North Carolina, and one of its directors will join Duke's board. It will become a unit of Duke Energy.

Nissan expands fuel leak recall to 59,000 sedans

By The Associated Press

DETROIT (AP) — A Nissan recall for possible fuel leaks in crashes has been expanded to include nearly 59,000 Altima and Maxima sedans worldwide.

The recall now covers certain 2013 to 2016 Altima midsize cars and some 2016 Maxima large cars. Also included are some 2014 to 2016 Teana sedans made in Russia. All have V6 engines.

Nissan says in documents posted by U.S. safety regulators that in a crash, fuel could leak from a seal between the gas tank and the fuel sending unit. That could cause a fire.

The company says the problem was discovered in crash tests, and it has no reports of fires, injuries or fuel leaks.

Scandal-hit Volkswagen hires Opel exec as strategy chief

By The Associated Press

FRANKFURT, Germany (AP) — Volkswagen is hiring a top strategy executive from

competitor Opel as it seeks to recover from a scandal over its cheating on U.S. diesel emissions tests.

Taking on Thomas Sedran as Volkswagen's new chief of corporate strategy brings another outside voice to the company as it re-examines its culture in the wake of the scandal.

The move announced Monday by the automaker based in Wolfsburg, Germany, comes on top of the company's decision to hire Christine Hohmann-Dennhardt, a former judge who oversaw legal compliance at competitor Daimler AG in the wake of a bribery scandal there.

Sedran is a former managing director for turnaround firm Alix Partners. He joined General Motors' Opel division as head of strategy and operations in 2012.

Polish prospective PM: Coal miner's daughter who rose up ranks

By Monika Scislowska

WARSAW, Poland (AP) — The conservative Law and Justice Party, which won Poland's general elections, has tapped Beata Szydlo to become the nation's next prime minister — the second woman in a row to hold the post. Here are key facts about the 52-year-old politician.

———

STRONG CAMPAIGNER:

In the spring, Szydlo ran the presidential campaign of Andrzej Duda, then a little-known figure who pulled off a shock upset of the widely-favored incumbent.

On the heels of that success, party leader Jaroslaw Kaczynski named Szydlo the Euro-skeptic party's candidate to lead the government in the fall parliamentary elections.

PERSONAL TOUCH:

Szydlo says her success lies in listening and talking to ordinary people, and she won much support by criss-crossing Poland in her campaign "Szydlobus." That personal touch may be a key asset as she attempts to bridge a widening divide between Poles who have benefited from the nation's economic boom and those who feel they have been left out, and look to her party for help.

COAL-MINER'S DAUGHTER:

Szydlo was born Beata Maria Kusinska in 1963 to a coal mining family near Oswiecim, in

southern Poland, where she was raised in the shadow of the former Nazi death camp of Auschwitz. Her maternal great- grandfather died in Auschwitz as a Polish inmate. Her maternal grandfather suffered burns in a fire in the nearby Brzeszcze coal mine. Her father, also a coal miner, wanted her to be a mining engineer. She once told The Associated Press that she sometimes regrets she did not follow that advice.

Chamber: Obama, EPA putting Paris 'ambition' ahead of law

By Kevin Rogers

In its zeal to present the "strongest hand possible" at the upcoming United Nations-sponsored climate negotiations, the Obama administration finalized a "radical transformation of the entire energy sector," knowing that it might not pass legal muster, the Chamber of Commerce's top energy official charged Monday.

"In the administration's own words, they want to march into Paris with the strongest hand

possible." Karen Harbert, president and CEO of the Chamber's Institute for 21st Century Energy, said. "Implementing a transformation of the entire electric sector certainly gives one the appearance of a strong hand, albeit the fact that this is going to be litigated for a number of years."

Asked to respond, EPA spokeswoman Melissa Harrison said the rule is "grounded firmly in science and the law and is fair, flexible, and affordable."

"I do think it's fair to say that there's a political aspiration here to show leadership in Paris and to encourage or coerce other countries to follow suit," Harbert said.

The Clean Power Plan, which seeks to cut power sector emissions by 32 percent by 2030, based on a 2005 baseline, includes rules for existing and new power plants. It's a key component of the administration's pledge to cut overall U.S. emissions by up to 28 percent from 2005 levels and achieve those reductions by 2025.

The climate negotiations, set to kick off on November 30, seek a deal that would cut emissions enough to keep average global temperatures from rising 2 degrees Celsius from pre-industrial levels. The Intergovernmental Panel on Climate Change projects that the world could exceed that threshold by 2050, absent strong action, and predicts that doing so could lead to irreversible damage to the planet.

While the rule for new fossil fuel plants has hard emissions limits, the rule for existing plants, while requiring states to hit specific carbon reduction targets, gives them the flexibility to achieve the cuts through a combination of steps, including improving the efficiency of coal-fired plants, converting them to natural gas, or installing new renewable energy capacity.

The Chamber, along with 15 other trade associations, on Friday sued the agency over the existing plant rule, petitioning a U.S. appeals court to temporarily stop its implementation, saying they would suffer irreparable harm if the rule takes effect. Other industry groups, private companies and 26 states filed separate suits against the regulations.

They contend that the agency is illegally double-regulating power plants under two different sections of the Clean Air Act, and that the regulations unlawfully force states to alter their energy mixes.

The National Association of Manufacturers, which joined the Chamber suit, said the administration was misusing the Clean Air Act to press its international agenda.

"The Clean Air Act wasn't designed as a tool for climate negotiations," Linda Kelly, the group's senior vice president and general counsel, said. "We have to make sure that the agency is acting within the bounds of its regulatory authority, which it is not here."

Joanne Spalding, the chief climate counsel for the Sierra Club, said the groups were stretching for arguments.

"It's wishful thinking," she said. "This rule has been in the works for years, and EPA has been carefully constructing it with input from stakeholders across the spectrum."

She also dismissed the likelihood of plaintiffs winning a stay of the rule, despite the large coalition of states and groups petitioning for one.

"I do think that the court will be looking at if the petitioners have actually demonstrated what they need to demonstrate in order to get a stay and not the number of petitioners that are before the court," she said. "EPA is on firm ground in its legal authority to issue the Clean Power Plan."

To obtain a stay, the plaintiffs would have to prove they would suffer "irreparable harm" by implementing the rules; that the harm would outweigh the damage done by not implementing the rules; and that they would likely succeed on the merits of their arguments.

Harben said the harm from immediately implementing the regulations is clear enough for a stay, since, as the rule is implemented, states will have to begin making decisions on implementation plans ahead of their first draft deadline in September 2016. She also said the rule would raise electricity prices, cost jobs in the mining and power sectors, and make manufacturing more expensive.

"It is our view that the rule will impose significant harm on a broad cross-section of American industry," she said.

Spalding said she was skeptical that the plaintiffs could make that case, noting that states would have up to three years to submit final plans, and that those plans wouldn't go into effect until 2022.

"Given the lengthy timeframe EPA has adopted in the final rule, they really can't show irreparable harm," she said.

Whitfield, chairman of the House Energy and Commerce Subcommittee on Energy and Power, said EPA's rules were illegal and would have disastrous economic effects if implemented. The resolutions are issued under the Congressional Review Act, which gives Congress a 60-day window to weigh in on published regulations.

"There's nothing in the Clean Air Act that authorizes EPA to implement these unprecedented rules," he said in a statement. "These resolutions stand up for ratepayers, jobs, and affordable energy in Kentucky and throughout the country."

The resolutions would have to be approved by both chambers of Congress and signed by President Barack Obama. The House would need 290 votes to overturn a likely veto, while the Senate would need 67 votes.

Senate Majority Leader Mitch McConnell, R-Ky., and supporters plan to issue their own resolutions against the regulations this week.

Coal mine expansion stalls in lawsuit citing climate change

By Matthew Brown

BILLINGS, Mont. (AP) — The U.S. Interior Department should not have approved the expansion of a southeastern Montana coal mine before taking a closer look at its effect on the environment, a federal judge said about a lawsuit arguing the government ignored coal's contributions to climate change.

Environmental groups sued the Interior Department after it approved an expansion of the Spring Creek Coal mine in 2012. The case marks the second time conservationists have used worries over climate change to successfully challenge approval of a coal mine after it had been granted.

But unlike in the previous case involving Colorado mines, U.S. Magistrate Judge Carolyn Ostby did not explicitly name climate change as a factor in her decision issued Friday. She instead referred more broadly to "air quality" concerns, saying the government had failed to explain its thinking on the issue before granting approval.

Ostby said work at the mine near Decker will not be shut down immediately. Rather, the judge recommended that federal officials reconsider the environmental effects of the expansion by Wyoming-based Cloud Peak Energy. The mine, which employs about 260 people, is allowed to continue operating in the meantime.

World's Catholic bishops issue appeal to Paris climate talks

By Nicole Winfield

VATICAN CITY (AP) — Catholic patriarchs, cardinals and bishops representing five continents on Monday appealed to climate negotiators to approve a "transformative" and fair, legally binding agreement that sets global temperature limits and goals for eliminating fossil-fuel emissions.

Representatives of bishops' conferences from around the globe signed the appeal in a renewed push to encourage climate negotiators meeting in Paris next month to heed Pope Francis' call to protect God's creation and the poor who suffer most from its exploitation.

The church's 10-point proposal calls for governments to approve legally binding limits to global average temperatures, set a mid-century goal for phasing out emissions from fossil fuels and provide binding and ambitious mitigation commitments that recognize the different responsibilities for, and abilities to adapt to, global warming.

No precise temperature limit was proposed in the appeal. Indian Cardinal Oswald Gracias, who heads the Asian bishops' conference, suggested the omission was a compromise designed to ensure all bishops could sign onto the appeal, which is the first of its kind for the episcopal conferences from each of the five continents.

An intolerable unimaginable heat forecast for Persian Gulf

By Seth Borenstein

WASHINGTON (AP) — If carbon dioxide emissions continue at their current pace, by the end of century parts of the Persian Gulf will sometimes be just too hot for the human body to tolerate, a new study says.

How hot? The heat index — which combines heat and humidity — may hit 165 to 170 degrees (74 to 77 Celsius) for at least six hours, according to numerous computer simulations in the new study. That's so hot that the human body can't get rid of heat. The elderly and ill are hurt most by current heat waves, but the future is expected to be so hot that healthy, fit people would be endangered, health experts say.

"You can go to a wet sauna and put the temperature up to 35 (Celsius or 95 degrees Fahrenheit) or so. You can bear it for a while, now think of that at an extended exposure" of

six or more hours, said study co-author Elfatih Eltahir, an MIT environmental engineering professor.

While humans have been around, Earth has not seen that type of prolonged, oppressive combination of heat and humidity, Eltahir said. But with the unique geography and climate of the Persian Gulf and increased warming projected if heat-trapping gas emissions continue to rise at current rates, it will happen every decade or so by the end of the century, according to the study published Monday in the journal Nature Climate Change.

EPA: Remedy to landfill fire won't come before 2017

By Jim Suhr

ST. LOUIS (AP) — An Environmental Protection Agency administrator says a plan to make sure an underground suburban St. Louis landfill fire doesn't reach a buried cache of nearby Cold War-era nuclear waste won't come before the end of next year.

As acting chief of the EPA region that includes Missouri, Mark Hague also told reporters Monday that the public isn't in any immediate danger from embers smoldering below the Bridgeton Landfill. He says that fire is still 1,000 feet from the nuclear waste at the West Lake Landfill.

Missouri Attorney General Chris Koster on Sunday again called on the EPA to figure out "without delay" how to keep the smoldering underground garbage away from the nuclear waste.

Hague says any EPA fix won't be rushed and will be based on the best science.

A message from America's Natural Gas Alliance

Clean is Powerful. Natural gas helps Georgia Power's plant generate electricity with 50% fewer emissions. Think about it.

Halting leak near sunken Lake Erie barge poses big challenge

By John Seewer

TOLEDO, Ohio (AP) — The U.S. Coast Guard is leading efforts to find a leak of what it believes is a petroleum-based substance coming from a sunken barge on the bottom of Lake Erie near the U.S.-Canadian border.

What makes that so challenging goes beyond just the location of the wreckage.

Among the questions — what is leaking, where is it coming from, how much remains and is there anything else that could a pose a danger on the recently discovered tanker barge 45 feet below the lake's surface.

—

THE WRECKAGE

While the barge's identity is uncertain, shipwreck hunters and the Coast Guard suspect it's the Argo, among 87 shipwrecks on a federal registry created two years ago to identify the most serious pollution threats to U.S. waters. The Argo is among five such wrecks within the Great Lakes but is the only one whose location hasn't been confirmed.

New way to bet on oil wipes out billions in investor savings

By Bernard Condon

NEW YORK (AP) — When Karen Robinson's husband died, she worried she wouldn't have enough money to raise her two young girls and save for retirement.

Then she met a financial planner, Tom Parks, who told her about investment partnerships that would allow her to ride the boom in U.S. oil and gas production while receiving a steady stream of payments to help pay her bills.

"He showed me this picture of the United States, and said they were getting oil out of shale, and energy was the way to go," says Robinson, a high school teacher from Cranfills Gap, Texas. She liked that Parks seemed so confident. "I trusted him."

Two years later, her partnerships have plunged in value and Robinson has lost more than half of the $202,000 she invested, according to a complaint filed with regulators against Parks and his firm, Ameriprise Financial Services. Parks did not return phone calls and emails; Ameriprise declined to comment.

Duke Energy buying Piedmont Natural Gas $4.9B

By The Associated Press

CHARLOTTE, N.C. (AP) — Duke Energy will spend about $4.9 billion in cash to acquire Piedmont Natural Gas, adding about a million new customers in the Carolinas and Tennessee.

The Charlotte, North Carolina, companies are key partners in the $5 billion Atlantic Coast Pipeline that will be the first major natural gas pipeline to serve the eastern part of the state.

Piedmont shareholders will receive $60 in cash for each share of common stock. That's a 42 percent premium to Friday's closing price. Duke Energy Corp. will also assume approximately $1.8 billion in Piedmont debt.

Piedmont will keep its name and maintain its headquarters in Charlotte, North Carolina, and one of its directors will join Duke's board. It will become a unit of Duke Energy.

Nissan expands fuel leak recall to 59,000 sedans

By The Associated Press

DETROIT (AP) — A Nissan recall for possible fuel leaks in crashes has been expanded to include nearly 59,000 Altima and Maxima sedans worldwide.

The recall now covers certain 2013 to 2016 Altima midsize cars and some 2016 Maxima large cars. Also included are some 2014 to 2016 Teana sedans made in Russia. All have V6 engines.

Nissan says in documents posted by U.S. safety regulators that in a crash, fuel could leak from a seal between the gas tank and the fuel sending unit. That could cause a fire.

The company says the problem was discovered in crash tests, and it has no reports of fires, injuries or fuel leaks.

Scandal-hit Volkswagen hires Opel exec as strategy chief

By The Associated Press

FRANKFURT, Germany (AP) — Volkswagen is hiring a top strategy executive from

competitor Opel as it seeks to recover from a scandal over its cheating on U.S. diesel emissions tests.

Taking on Thomas Sedran as Volkswagen's new chief of corporate strategy brings another outside voice to the company as it re-examines its culture in the wake of the scandal.

The move announced Monday by the automaker based in Wolfsburg, Germany, comes on top of the company's decision to hire Christine Hohmann-Dennhardt, a former judge who oversaw legal compliance at competitor Daimler AG in the wake of a bribery scandal there.

Sedran is a former managing director for turnaround firm Alix Partners. He joined General Motors' Opel division as head of strategy and operations in 2012.

More

Polish prospective PM: Coal miner's daughter who rose up ranks

By Monika Scislowska

WARSAW, Poland (AP) — The conservative Law and Justice Party, which won Poland's general elections, has tapped Beata Szydlo to become the nation's next prime minister — the second woman in a row to hold the post. Here are key facts about the 52-year-old politician.

———

STRONG CAMPAIGNER:

In the spring, Szydlo ran the presidential campaign of Andrzej Duda, then a little-known figure who pulled off a shock upset of the widely-favored incumbent.

On the heels of that success, party leader Jaroslaw Kaczynski named Szydlo the Euro-skeptic party's candidate to lead the government in the fall parliamentary elections.

PERSONAL TOUCH:

Szydlo says her success lies in listening and talking to ordinary people, and she won much support by criss-crossing Poland in her campaign "Szydlobus." That personal touch may be a key asset as she attempts to bridge a widening divide between Poles who have benefited from the nation's economic boom and those who feel they have been left out, and look to her party for help.

COAL-MINER'S DAUGHTER:

Szydlo was born Beata Maria Kusinska in 1963 to a coal mining family near Oswiecim, in

southern Poland, where she was raised in the shadow of the former Nazi death camp of Auschwitz. Her maternal great- grandfather died in Auschwitz as a Polish inmate. Her maternal grandfather suffered burns in a fire in the nearby Brzeszcze coal mine. Her father, also a coal miner, wanted her to be a mining engineer. She once told The Associated Press that she sometimes regrets she did not follow that advice.

BEFORE THE UNITED STATES
JUDICIAL PANEL ON MULTIDISTRICT LITIGATION

IN RE: VOLKSWAGEN "CLEAN DIESEL" MARKETING, SALES PRACTICES, AND PRODUCTS LIABILITY LITIGATION	**MDL NO. 2672**

SUPPLEMENTAL RESPONSE BY PLAINTIFFS MARIA BOURN, DAVID WATSON, STEPHEN VERNER, MARK SCHUMACHERAND THE CENTER FOR AUTO SAFETY APPRISING THE JUDICIAL PANEL ON MULTIDISTRICT LITIGATION OF IMPENDING SETTLEMENT NEGOTIATIONS IN TWO DISTRICT COURTS

Pursuant to 28 U.S.C. § 1407 and Judicial Panel on Multidistrict Litigation ("Panel") Rule 6.3(f), Respondents Maria Bourn, David Watson, Stephen Verner, Mark Schumacher and the Center for Auto Safety ("CAS") ("collectively, E.D. Va. Plaintiffs") respectfullyprovide this short supplemental response to advise the Panel of new information that has come to light since their response was filed on October 21, 2015.

Since the time of that filing, Chief Judge Gerald E. Rosen in the Eastern District of Michigan entered an "Order Appointing The Honorable Layn R. Phillips And The Honorable Steve W. Rhodes As Masters For Expedited Settlement Negotiations" (Oct. 22, 2015) (Dkt. No. 14) in *In re: Volkswagen "Clean Diesel" Cases*, Case No. 15-13360 GER-APP (E.D. Mich.), attached as Exhibit A. In that order, Chief Judge Rosen states that the appointment is "for the purpose of facilitating expedited settlement negotiations between the Plaintiffs and all Defendants" and "Judges Phillips and Rhodes are directed to proceed with all reasonable diligence in facilitating these negotiations . . . " *Id.* at 1.

One day later, Judge Joel L. Linares in the District of New Jersey entered an "Order Appointing The Honorable Layn R. Phillips And The Honorable Faith S. Hochberg As Masters For Expedited Settlement Negotiations" (Oct. 23, 2015) (Dkt. No. 31) in *In re: Volkswagen "Clean Diesel" Cases*, No. 15-7012 (JLL)(JAD) (D.N.J.). Exhibit B. In this order, Judge Phillips and Judge Hochberg "are hereby appointed for the purpose of facilitating expedited settlement negotiations between the Plaintiffs and all Defendants" and they "are directed to proceed with all reasonable diligence in facilitating these negotiations . . . ." *Id.* at 1. The substantive terms of the two orders are largely identical.

The Michigan order was brought to the attention of Judge Liam O'Grady in the Eastern District of Virginia (who is presiding over the cases brought against Volkswagen and Audi in that District), at a hearing held on Friday, October 23. While denying a stay

VW FOIA, EPA 06/20/2017 2017-FFP_035281

of all proceedings and remarking on the need for the cases to proceed expeditiously, Judge O'Grady noted that appointing mediators might be premature:

> THE COURT: Well, this is appointment of Masters to attempt to settle the case, and that's an interesting twist that may be jumping the gun. But if the parties -- I don't know the circumstances under which that was entered.
>
> MR. WILBURN[1]: I don't either.

"Hearing on Motions" at 11:12-16 (Oct. 23, 2015) in *Steffensen v. Volkswagen Group of America, Inc.*, No. 1:15-cv-1218 LO (E.D. Va.). Exhibit C.

The E.D. Va. Plaintiffs assume that additional efforts to push cases toward resolution before the Panel rules on any transfer order in MDL No. 2626 will be made before judges in other Districts around the United States. Indeed, in the Central District of California, a motion for class certification has been set for hearing on November 23, 2015—10 days before this Panel will consider the pending motions for centralization. "Plaintiff Christopher J. D'Angelo's Notice of Motion and Motion and Memorandum of Points and Authorities In Support of Motion for Class Certification" in *D'Angelo v. Volkswagen Group of America, Inc.*, Case No. 2:15-cv-07390-DOC (SPx) (C.D. Cal.). Exhibit D.

It is respectfully submitted that the goals underlying 28 U.S.C. §1407 would be best served by allowing the Panel to act before expedited settlement negotiations begin or class certification motions are decided. While the pendency of a multidistrict litigation does not automatically stay proceedings in potential transferee courts, piecemeal settlement negotiations ought not to occur while the Panel has yet to decide where to send all of these cases for coordinated pretrial proceedings. One of the potential benefits of a transfer under Section 1407 is the opportunity to provide a forum where a global pretrial settlement involving all interested parties can be reached. *See In re Asbestos Prods. Liability Litig. (No. VI)*, 771 F.Supp. 415, 421-22 (J.P.M.L. 1991) ("*Asbestos*").

[1] Counsel for the Volkswagen and Audi defendants.

VW FOIA, EPA 06/20/2017 2017-FFP_035282

Two groups not accounted for in the proceedings in the Eastern District of Michigan and the District of New Jersey are: (a) federal and state regulators and (b) private parties who have provided the requisite notice needed to bring a penalty and injunctive relief action pursuant to 42 U.S.C. § 7604 (part of the Clean Air Act). The E.D. Va. Plaintiffs, through their counsel, have been in contact with attorneys for the United States Department of Justice ("DOJ"), the United States Environmental Protection Agency ("EPA"), and various state and local regulatory agencies, and to date, they are the *only* group of private plaintiffs anywhere in the United States that have provided such notice. The E.D Va. Plaintiffs and the regulators must coordinate their actions to ensure that they are speaking with one voice, since both have overlapping enforcement rights under that statute.[2]

To be clear, the E.D. Va. Plaintiffs do not oppose mediation of this dispute and they believe Judge Phillips and the other designated Special Masters would be excellent choices to preside over settlement negotiations. All involved, including the E.D.Va. Plaintiffs, seek an expeditious resolution to the very serious misconduct that the Volkswagen and Audi defendants have admitted occurred here, but any decentralized, head-long rush to resolution should be slowed, if only for a short period, so that this Panel can centralize the cases in one District for coordinated pretrial proceedings. Indeed, the Volkswagen and Audi defendants, the regulators, and the private plaintiffs all have an interest in how the affected vehicles will be "fixed" so that federal and state emissions laws are complied with and so that there is an assurance that the vehicles can be registered with the various state Departments of Motor Vehicles. This will require coordination that cannot be achieved until the Panel enters a transfer order.

[2] In addition, CAS is also not accounted for. It has filed its own lawsuit in the Eastern District of Virginia for declaratory and injunctive relief and is pursuing broader environmental goals than those pursued by individual owners of the affected Volkswagen and Audi vehicles.

VW FOIA, EPA 06/20/2017 2017-FFP_035283

The present situation is similar to the dynamic that eventually led this Panel to centralize thousands of cases in *Asbestos*. The E.D. Va. Plaintiffs agree that this litigation needs to move swiftly, but it should do so in an organized manner, and a delay of roughly six weeks in order to allow the Panel to complete its work is appropriate. As an alternative, the E.D. Va. Plaintiffs suggest that the Panel consider dispensing with oral argument and send the cases to its chosen venue immediately. There is no serious dispute that centralization is needed here.

UNITED STATES DISTRICT COURT
EASTERN DISTRICT OF MICHIGAN
SOUTHERN DIVISION

In re: VOLKSWAGEN "CLEAN DIESEL" CASES /

No. 15-13360
Hon. Gerald E. Rosen

ORDER APPOINTING THE HONORABLE LAYN R. PHILLIPS AND THE HONORABLE STEVEN W. RHODES AS MASTERS FOR EXPEDITED SETTLEMENT NEGOTIATIONS

At a session of said Court, held in the U.S. Courthouse, Detroit, Michigan on October 22, 2015

PRESENT: Honorable Gerald E. Rosen
United States District Chief Judge

Based upon the large number of parties involved and the overall complexity of this litigation, and after discussing the matter with Plaintiffs' Interim Coordinating Class Counsel and counsel for Defendants at a Status Conference held on October 14, 2015, as well as in numerous telephone conferences,

NOW, THEREFORE, IT IS HEREBY ORDERED that:

In accordance with Federal Rule of Civil Procedure 53, the Honorable Layn R. Phillips and the Honorable Steven W. Rhodes are hereby appointed as Masters for the purpose of facilitating expedited settlement negotiations between the Plaintiffs and all Defendants. In their roles as Masters, Judges Phillips and Rhodes are directed to proceed with all reasonable diligence in facilitating these negotiations, in the manner and at the times and locations they deem appropriate.

VW FOIA, EPA 06/20/2017 2017-FFP_035287

For each settlement negotiation session, Judges Phillips and Rhodes shall have the authority to establish the negotiation process, including the submission of documents, the attendance of parties with authority to settle, the procedure governing the settlement negotiations, and the schedule for the negotiations.

All proceedings, discussions, and writings incident to these settlement negotiations shall be privileged and confidential and shall not be disclosed, filed or placed in evidence.

Defendants Volkswagen AG and Audi AG are directed to participate in these expedited settlement negotiations but may proceed without prejudice to their right to later raise any defenses to service of process or jurisdiction.

Judges Phillips and Rhodes may communicate *ex parte* with any party or the Court, at their discretion. Judges Phillips and Rhodes, in their discretion, may impose non-contempt sanctions under Rule 53(c)(2) and may, where they deem necessary, recommend contempt proceedings to the Court. They may also conduct any discovery-related proceedings and any evidentiary hearings that they deem necessary to facilitate settlement or to resolve any issues that arise in the settlement negotiations.

As Masters appointed under this Order, Judges Phillips and Rhodes shall function as quasi-judicial officers under the authority of the Court, and are, therefore, immune from suit. Neither Judge Phillips nor Judge Rhodes shall be called as a witness.

Judges Phillips and Rhodes shall be compensated by the Plaintiffs and the

Defendants in accordance with rates to be determined by Judges Phillips and Rhodes following their discussion of this matter with the parties. The Plaintiffs shall pay half of the Masters' fees and expenses, and the Defendants shall collectively pay the other half of these fees and expenses. The right to entertain motions seeking redistribution of these fees and expenses following the entry of judgment in this matter shall be reserved to the then-presiding court.

Finally, in accordance with Rule 53(b)(1), the parties shall within **seven (7) days** of the date of this Order, file and serve any objections they might have to the appointment of Judges Phillips and Rhodes as Masters or any other terms of this Order.

SO ORDERED.

UNITED STATES DISTRICT COURT
DISTRICT OF NEW JERSEY

In re: VOLKSWAGEN "CLEAN DIESEL" CASES	Civil Action No.: 15-7012 (JLL) (JAD) **ORDER APPOINTING THE HONORABLE LAYN R. PHILLIPS AND THE HONORABLE FAITH S. HOCHBERG AS MASTERS FOR EXPEDITED SETTLEMENT NEGOTIATIONS**

Based upon the large number of parties involved and the overall complexity of this litigation, and after discussing the matter with Plaintiffs' Interim Co-Liaison Counsel and counsel for Defendants at a Status Conference held on October 20, 2015, as well as a telephone conference held on October 22, 2015,

IT IS on this 23rd day of October, 2015,

ORDERED that in accordance with Federal Rule of Civil Procedure 53, the Honorable Layn R. Phillips and the Honorable Faith S. Hochberg are hereby appointed as Masters for the purpose of facilitating expedited settlement negotiations between the Plaintiffs and all Defendants. In their roles as Masters, Judges Phillips and Hochberg are directed to proceed with all reasonable diligence in facilitating these negotiations, in the manner and at the times and locations they deem appropriate; and it is further

ORDERED that for each settlement negotiation session, Judges Phillips and Hochberg shall have the authority to establish the negotiation process, including the submission of documents, the attendance of parties with authority to settle, the procedure governing the settlement negotiations, and the schedule for the negotiations; and it is further

ORDERED that all proceedings, discussions, and writings incident to these settlement negotiations shall be privileged and confidential and shall not be disclosed, filed or placed in evidence; and it is further

ORDERED that Defendants Volkswagen AG and Audi AG are directed to participate in these expedited settlement negotiations but may proceed without prejudice to their right to later raise any defenses to service of process or jurisdiction; and it is further

ORDERED that Interim Co-Liaison Counsel shall participate in these expedited settlement negotiations on behalf of Plaintiffs consolidated in the above action; and it is further

ORDERED that Judges Phillips and Hochberg may communicate ex parte with any party or the Court, at their discretion. Judges Phillips and Hochberg in their discretion, may impose non-contempt sanctions under Rule 53(c)(2) and may, where they deem necessary, recommend contempt proceedings to the Court. They may also conduct any discovery related proceedings and any evidentiary hearings that they deem necessary to facilitate settlement or to resolve any issues that arise in the settlement negotiations; and it is further

ORDERED that as Masters appointed under this Order, Judges Phillips and Hochberg shall function as quasi-judicial officers under the authority of the Court, and are, therefore, immune from suit. Neither Judge Phillips nor Judge Hochberg shall be called as a witness; and it is further

ORDERED that Judges Phillips and Hochberg shall be compensated by the Plaintiffs and the Defendants in accordance with rates to be determined by Judges Phillips and Hochberg following their discussion of this matter with the parties. The Plaintiffs shall pay half of the Masters' fees and expenses, and the Defendants shall collectively pay the other half of

VW FOIA, EPA 06/20/2017 2017-FFP_035292

these fees and expenses. The right to entertain motions seeking redistribution of these fees and expenses following the entry of judgment in this matter shall be reserved to the then-presiding court; and it is further

ORDERED that in accordance with Rule 53(b)(1), the parties shall within **seven (7) days** of the date of this Order, file and serve any objections they might have to the appointment of Judges Phillips and Hochberg as Masters or any other terms of this Order.

IT IS SO ORDERED.

HEARING ON MOTIONS

October 23, 2015

Before: Liam O'Grady, USDC Judge

APPEARANCES:

Gregory Y. Porter, Counsel for the 1218 Plaintiffs

Daniel M. Cohen and Warren T. Burns,
Counsel for the 1223 Plaintiffs

William D. Dolan, III, Joseph H. Meltzer, David H. Thompson,
and Michael Weitzner, Counsel for the 1225 Plaintiffs

Walter D. Kelley, Jr., Bernard J. DiMuro, Harvey B. Cohen
Hugh B. McCormick, III and Andrew P. Bell,
Counsel for the 1229 Plaintiffs

Paul B. Hynes, Jr., Carl S. Kravitz and Tana Lin,
Counsel for the 1239 Plaintiffs

Douglas J. McNamara and Geoffrey Graber,
Counsel for the 1241 Plaintiffs

J. Gregory Webb, Counsel for the 1245 Plaintiffs

Walter D. Kelley, Jr., Bernard J. DiMuro and Harvey B. Cohen,
Counsel for the 1295 Plaintiffs

John D. Wilburn, Terrence M. Bagley, Christopher E. Trible and
Heather A. Britton, Counsel for Defendant Volkswagen

VW FOIA, EPA 06/20/2017 2017-FFP_035296

THE COURT: All right, let's have the counsel for Volkswagen and the various cases all come up and identify themselves for the record.

I know you, you're Mr. Dolan.

MR. DOLAN: Judge, I've forgotten my name by now. William Dolan on behalf of the Johnson, et al. plaintiffs in 1225.

With me, Your Honor, my co-counsel Joseph Meltzer -- there is Joe right here.

MR. MELTZER: Good morning, Your Honor.

THE COURT: Good morning, Mr. Meltzer.

MR. DOLAN: From Kessler, Topaz, Meltzer & Check.

And also is our other co-counsel David Thompson from Cooper & Kirk.

MR. THOMPSON: Good morning, Your Honor.

THE COURT: Good morning.

MR. DOLAN: Also from Copper & Kirk is Michael Weitzner, who is a member of this court.

MR. WEITZNER: Good morning.

THE COURT: All right. Good morning to you.

MR. DOLAN: We are delighted to be in front of the Court.

THE COURT: All right. Thank you, Mr. Dolan.

MR. KELLEY: Walt Kelley on behalf of the plaintiffs in the 1229 action, as well as the 1295 action. And Mr. DiMuro

is also co-counsel in those actions, and is Mr. Cohen.

MR. DiMURO: Harvey Cohen.

MR. KELLEY: Yes, Harvey Cohen.

THE COURT: Good morning to each of you.

MR. McNAMARA: Good morning, Your Honor. Douglas McNamara from Cohen Milstein. We're here on Shalov versus Volkswagen, 1241. I am here with my colleague Geoff Graber.

THE COURT: All right, good morning.

MR. GRABER: Good morning, Your Honor. Geoffrey Graber.

MR. PORTER: Good morning, Your Honor. Gregory Porter on behalf of plaintiff Steffensen in the 1218 number. Thank you.

THE COURT: All right, good morning to you, sir. Thank you.

MR. COHEN: Good morning, Your Honor. Daniel Cohen, Cuneo Gilbert & LaDuca. And I am here in 1223. I am here with my co-counsel, Warren Burns, of Burns Charest, LLP.

MR. BURNS: Good morning, Your Honor.

THE COURT: All right, good morning to both of you.

MR. COHEN: Thank you.

MR. WEBB: Good morning, Your Honor. Greg Webb from the MichieHamlett law firm in Charlottesville, Virginia on behalf of the Butler plaintiffs, 1245.

THE COURT: 1245. All right, good morning to you,

sir.

MR. WEBB: Good morning, Your Honor.

MR. HYNES: Good morning, Your Honor. Paul Hynes from Zuckerman Spaeder for the plaintiffs in the Proudlove v. Volkswagen action, number 1239.

THE COURT: All right.

MR. HYNES: With me is my colleague Carl Kravitz from Zuckerman Spaeder. And my co-counsel, Tana Lin from Keller Rohrback.

MS. LIN: Good morning, Your Honor.

MR. KRAVITZ: Good morning, Your Honor.

THE COURT: Good morning.

MR. WILBURN: Good morning, Your Honor. John Wilburn from McGuire Woods on behalf of Volkswagen Group of America.

With me today are my colleagues also from McGuire Woods Terry Bagley, Christopher Trible, and Heather Britton on behalf of the defendant.

THE COURT: All right, good morning to each of you.

MR. BAGLEY: Good morning, Your Honor.

MR. TRIBLE: Good morning.

THE COURT: Mr. Kelley.

MR. WILBURN: I'm sorry --

MR. KELLEY: Judge O'Grady, I'm sorry, I neglected -- hold on just a moment -- to fully introduce our folks. Let's see. Okay, we have got -- I seem to have -- come on up, you do

it.

I'm sorry, we've got a cast of thousands we're coordinating here.

MR. BELL: Good morning, Your Honor. Andrew Bell from Locks Law Firm on the 1229 case. Mr. Kelley is going to be arguing on our case this morning. Thank you for having us here this morning.

THE COURT: All right. Good morning, Mr. Bell.

MR. McCORMICK: Good morning, Your Honor. Hugh McCormick with Patten Warnom Hatten & Diamonstein in Newport News. We are also on the 1229 case. And Mr. Kelley is going to be arguing that for us.

THE COURT: Okay. Good morning to you.

MR. McCORMICK: Pleasure to see you, sir.

THE COURT: All right, do we have everybody now? All right.

This comes on Volkswagen's motion to stay the proceedings until the Multidistrict Litigation Panel makes their decision. And I understand the hearing is still set for December 3, is that right?

MR. WILBURN: Yes, Your Honor, it is.

THE COURT: All right. I have sat in that -- you know, it seems like they find the biggest auditoriums that they can find, and everybody mills around for a long time while they go through with their process. Actually, I've been there

VW FOIA, EPA 06/20/2017 2017-FFP_035300

several times, and at the end of the day I'm still not sure how decisions are made. I think back in my day they gave everybody about three minutes, and perhaps now they give everybody five minutes, I'm not sure, but it's not much time. Which underlines the importance of written pleadings.

So I've looked at all of the oppositions and the reasons for the oppositions. Counsel have pointed me to Judge Linares from New Jersey and Judge Rosen from Michigan as to things that have been done in preparation for the decision by the Panel.

I don't need further argument on the motion to stay.

I will hear, and I do this with great trepidation, if somebody has anything new to add to their pleadings, and they believe that I should have that information, I am happy to hear that at this time.

MR. KELLEY: I have one thing that you may already know, so please stop me. Earlier this week the District of New Jersey, as I understand it --

THE COURT: That's Judge Linares, I think.

MR. KELLEY: And you may know this, so please stop me if you do. Basically stayed substantive work in the case, but allowed the case to go forward as far as preservation letters and ESI. You know, the preliminaries that lead up to the discovery.

THE COURT: Correct. I read Judge Linares' order.

Mr. Dolan.

MR. DOLAN: Just briefly, Judge. Last night Judge Rosen entered an order, again you may know that.

THE COURT: That I am not familiar with.

MR. DOLAN: They are continuing in Michigan. And he appointed two judges, the Honorable Layn Phillips and the Honorable Steven Rhodes as Masters for the purpose of facilitating expedited settlement negotiations between the plaintiffs and all the defendants. And then he went on to outline the standards.

I have a copy if the Court were to be interested in that.

THE COURT: Sure, I am happy to read that.

MR. DOLAN: Our takeaway from that would be it's an illustration that stay was not granted there and that activity is underway.

And that when you combine that with the notion that even the defendant believes that either the Eastern District of Virginia or Michigan would be the most logical and persuasive locations for these 350 cases, we believe that it indicates motion that a stay -- that there are things that we can do between now and whenever the Panel renders its decision. And you've heard what we think can be done.

For instance, the preservation order, because that's a real issue. Getting started on ESI. Asking them for the

documents that they've already given the government. Things that clearly can be done to move things along, particularly if you are of the view that the case may very well come here.

The second point I would like to raise, with all due respect and with a certain amount of trepidation because I have never asked a judge questions, I've always tried to answer them, whether this Court would entertain favorably, less than dancing a jig, of the receipt of these cases by the MDL Panel?

And the reason I raise that issue is that if the Court were inclined to be open to that, it would enable the lawyers who are going to argue in New Orleans in December to make that Court, make the Panel aware of that issue, of your position.

It may be a bit inappropriate, but I thought I would at least raise that potential issue with you.

THE COURT: All right, thank you.

Yes, sir.

MR. McNAMARA: Thank you, Your Honor.

Douglas McNamara for Cohen Milstein on behalf of Mr. Shalov. And adding on a little bit to what Mr. Dolan said.

The only thing new I wanted to bring to Your Honor's attention is I have had the privilege now in working in front of Judge Trenga on the Lumber Liquidators MDL with Mr. Trible and his colleagues here at McGuire Woods, and adding on to what counsel just stated, we had managed to do a lot of work before

VW FOIA, EPA 06/20/2017 2017-FFP_035303

there was even an operative complaint before the court, including ESI protocol discussions, search term discussions, preservation orders, figuring out coordinating counsel.

A lot of the -- I mean, Your Honor, attached to our brief was Judge Trenga's order from July 2 --

THE COURT: I read it. It's a masterpiece.

MR. McNAMARA: It is. There is a lot that can be done without any chance --

THE COURT: Truly one of the most comprehensive initial orders without question I have ever read. And I think very favorably of what has happened to date in Lumber Liquidators.

In answer to your question, Mr. Dolan, I am happy, if the Panel decides that they want to send the case to the Eastern District of Virginia, I am happy to receive it and do the best I can in the case as it moves forward.

And I had intended without question to alert the parties to the fact that I thought that Judge Trenga and the parties had done a terrific job in putting that in a position to move forward, and recommend that they read it comprehensively if the case comes back here.

MR. McNAMARA: Thank you, Your Honor.

THE COURT: All right, thank you.

Yes, sir. Does anybody else on the plaintiffs' side want to be heard about new information? All right, thank you.

MR. WILBURN: Good morning, Your Honor. John Wilburn from McGuire Woods.

THE COURT: Yes.

MR. WILBURN: I don't have new information. I did want to address the order that Mr. Dolan passed up just to inform the Court that we haven't yet seen that. But based on Mr. Dolan's description of its contents, we would assert that that exacerbates, that sort of makes the point of the problem of not staying it. Is we would be dealing with inconsistent potentially ESI here versus there, and I think it makes the point of our argument.

THE COURT: Well, this is appointment of Masters to attempt to settle the case, and that's an interesting twist that may be jumping the gun. But if the parties -- I don't know the circumstances under which that was entered.

MR. WILBURN: I don't either.

THE COURT: And what the arguments there were. It may well be that the parties in that case said, Judge, we would be happy to try and sit down and resolve this, especially given the public statements that have been made by Volkswagen.

But I understand your position. Thank you, sir.

MR. WILBURN: Thank you, Your Honor.

THE COURT: All right. Well, you know, these cases present circumstances that require immediate attention. And a stay is not necessary in my mind under the Fisher versus United

States standards. And I certainly am very concerned about any adverse rulings or inappropriate areas where the judge who handles -- and I am as confident as the rest of you are that there will be a jurisdiction designated for the case for discovery to be held.

But the allegations in the complaint as amplified by the CEO of Volkswagen America demonstrate that half a million people and their families have cars that they rely on for their livelihood. These nitric oxides are polluting the environment.

I think there is really two significant reasons to move forward to the extent we can here today. And the fact that these cars are emitting harmful pollutants is one.

The second is that many of these cars are coming up for emission standards tests, they're going to fail them. I don't know what is going to happen at that stage. And certainly I don't expect the EPA to pull the cars off the road, but that's not impossible given the fact that they are beholding to administrative tensions.

So I strongly believe that we should get as far as along as possible in the case without interfering with the District Court who receives the consolidated cases. And it seems to me that in looking at what Judge Rosen did and Judge Linares, we can at least get a preservation order in place.

And I historically know that the German laws on keeping records are a little different. And, of course, they

don't even have discovery there in civil cases. And who knows what has happened through the search warrants that were executed. But I think a preservation order is appropriate.

We can do a -- I can do an order consolidating the cases that are here already.

I think we should appoint interim lead counsel to represent the class that is here for the purposes of the work that we can do prior to the Panel's decision.

We can draft discovery on both sides that will be exchanged but not responded to, but we could get started on that to identify what each side believes is appropriate in the discovery area.

A protective order certainly could be worked on. Protocol for electronic discovery.

In the Kolomeets case there was a request for documents produced to the Energy and Commerce Committee by Volkswagen. The request for a creation of a document depository. I am a little bit concerned about that.

And then the production of exemplars of Volkswagen's communications to customers who are not represented by counsel.

So that's where I am. And perhaps let's hear from Volkswagen. Where do you think we may run into trouble?

MR. WILBURN: Well, a couple of issues, Your Honor. One, Your Honor didn't address the time for a responsive pleading. And I think even in the --

THE COURT: Yeah, everybody has agreed that they are not going to require you to respond, and I think that that's appropriate.

MR. WILBURN: Thank you, Your Honor. If I may go through, I had a list of these items. I was hopefully tracking them accurately. The preservation order is one. I assume we can work that out among counsel.

The appointment of interim lead counsel was primarily an issue for the plaintiffs, I believe.

But you mentioned discovery on both sides that would be shared but not responded to. I wasn't tracking exactly what Your Honor meant by that.

THE COURT: Well, here in the Eastern District of Virginia, you know, a case is answered. And as soon as an answer is filed, we issue a scheduling order. And that scheduling order, we open discovery. And the parties are free to do interrogatories, document requests, and requests for admissions. And I would assume that we would work on that written discovery, not take depositions, not at this stage even 30(b)(6) depositions, that we would hold off on that.

But then Volkswagen may in its mind have discovery that it intends to ask each of the plaintiffs in the class. And you may want to, if you choose, you may want to disclose that earlier so that the parties have a chance to reflect on whether they are going to object to it or not.

VW FOIA, EPA 06/20/2017 2017-FFP_035308

And so, we would move to a stage where if the case does come here or it goes to Michigan, these plaintiffs and you have an idea of what is going to be sought down the road and can integrate that into the consolidated case.

MR. WILBURN: Would the discovery process proceed in the ordinary course? And by that I mean, once we get the initial scheduling order from the Court, we would simply follow that? You are not authorizing discovery today?

THE COURT: Discovery is going to change a little bit if the case comes back. And I would invite you to look at the Lumber Liquidators -- well, you probably have.

MR. WILBURN: Yes.

THE COURT: I am sorry. That would be the model that I would be looking at. And to the extent that it needed tweaking, we would get together and do that at the beginning of the case.

So for purposes now, I'm just talking about really just advancing the ball to further understand what the parties believe they need moving down the road.

One, it's something that you can notify your client about. I think it dovetails with the preservation order. And if your clients are unaware that plaintiffs are going to be seeking this information, then they may go awry of that preservation order.

Hopefully there is no question that when this whole

thing blew up, that immediately they were told that all documents needed to be preserved. But sometimes a preservation order just makes that clear.

MR. WILBURN: Yes, Your Honor. What's the Court's thought in terms of the filed but unserved? There are a series of cases that have been either served we are here on, some have been partially served that we don't have -- there is not service on the European parent that needs to go through the ordinary course, and some that are not served at all and aren't before the Court.

Does the Court have any guidance on how you might treat those?

THE COURT: I know that there is summons outstanding for a series of the cases. I mean, my thought would be that you ought to -- well, one, I want the plaintiffs to get together.

And, Mr. Dolan, would you be willing to serve as one of the interim counsel for purposes of the case while it remains here prior to the Panel's decision?

MR. DOLAN: Yes, Your Honor.

THE COURT: All right. Then I would like Mr. Dolan to be one of those interim leaders. And if you would talk amongst yourselves, and if you need a couple more lead counsel on an interim basis to coordinate things, I'm sure that Mr. Dolan will be coordinating with those who have filed suits

regardless of whether the summons have been served or not.

So collectively, I think you're better served having a unified front and not having people coming in two weeks later and three weeks later filing different stuff, but all be coordinating with Mr. Dolan and colleagues now versus later.

MR. WILBURN: Based on your comments, I think what we would suggest to do is we would start with the Lumber Liquidators order as you described as being sort a useful model at least on these topics. Would that be the Court's preference?

THE COURT: In terms of discovery that would be forthcoming?

MR. WILBURN: Well, some of these -- yes, Your Honor, in terms of discovery that would be forthcoming in particular.

THE COURT: I'm happy to have you -- I can't put my -- I don't have in mind the exact -- that section. So I am unsure the order, what it requests.

MR. WILBURN: And I'm not suggesting to lock in an order on that today. I was just, in terms of providing the Court, I think what our expectation might be is to start with that language as a form, and obviously consult with Mr. Dolan and whomever else on the plaintiffs' side about that.

THE COURT: Mr. Dolan, you are not involved in the Lumber Liquidators case?

MR. DOLAN: I am not.

VW FOIA, EPA 06/20/2017 2017-FFP_035311

THE COURT: So it will take a little time for him to review that and decide. All right.

What's Volkswagen's position on the disclosure at this stage of the documents produced to the Energy and Commerce Committee? I'm unfamiliar as to what documents they are. As well as the creation of a document depository or the contacts with unrepresented customers.

MR. WILBURN: I don't know, Your Honor. That wasn't an issue that we had flagged for today. And I apologize for that. But it's something that we can speak with our client about and formulate a position and advise the Court and the plaintiffs on. I just can't speak to that today.

THE COURT: All right. Well, let's take a week, decide whether you oppose any of the production of any of those documents, or the depository, or your communications with those customers. And I'll -- can you do that in seven days? Can you get me a brief on that?

MR. WILBURN: Yes, Your Honor.

THE COURT: And then I can get a response from plaintiffs in seven days after that. And, Mr. Dolan, you coordinate that response. Then I will make a decision on that aspect.

Otherwise, unless I hear opposition, I would be looking for a preservation order. If the parties can agree on one, great. If you can't, then within ten days, how about a

week from Monday, let's submit a plaintiffs' preservation order and a defendant's preservation order if you can't agree on it. And I will review it and I will issue one or the other or a combination.

I will order consolidation of the cases. Why don't you take 30 days to try and work on some draft discovery and exchange that. And to the extent you need me to referee anything -- it's just moving forward with discovery. But if there are going to be objections to the disclosure of certain discovery and you want to file objections, let's take 15 days and file any objections.

Maybe then I don't even have a hearing on that if I think that's going too far. I think the judge who ultimately gets the case should fashion the parameters of discovery. So I don't want to get in the middle of that, but I want to get people starting thinking about what discovery is going to be necessary and what privileges may exist, and why there may be objections to plaintiffs' seeking discovery. And the same with defendants.

MR. WILBURN: Would Your Honor consider pushing those deadlines back by just a couple of weeks? And the reason I suggest that is we may have a decision, we anticipate having an MDL decision roughly middle of December. And if we exchange draft discovery a little bit later and push the objections, the draft objections or formal objections behind that, we'll know

whether we are here or whether the issue is mooted, at least for the purpose of the MDL litigation.

COURT: All right. So 45 days, that will push us into the 10th or 12th of December, is that right?

MR. WILBURN: Perhaps submitting the discovery 30 days out, the draft discovery, makes sense. But I think what I am suggesting is providing the objections after the MDL decision.

THE COURT: Yeah, that's fine. I am agreeable to that.

MR. WILBURN: And the Court is agreeable that the responsive pleadings would be filed at some point after the MDL decision?

THE COURT: Correct. And the protective order, is that something you think you can work through now or -- I do, but you can tell me why you don't think it's appropriate.

MR. WILBURN: I think we can work on a protective order with opposing counsel. I don't see any reason why we can't work on that over the next -- it might take more than a week.

THE COURT: Right.

MR. WILBURN: We have got to interact with more than just a couple of people on these issues. So if we could have more time to circulate a draft, that would be helpful.

THE COURT: Yeah, why don't you take 21 days, and

circulate a draft, and let me know if you are able or unable to reach a decision on a protective order.

MR. WILBURN: Yes, Your Honor, we will work hard on that.

THE COURT: Protocol for electronic discovery.

MR. WILBURN: That will take some time, at least on our end. That sort of work takes time in far less complex cases than this one.

And I know that at least at the McGuire Woods side right now, we're not in a position to -- we are not in a position I think to suggest protocols. It will take I think well more than 30 days. 60 days I think would be optimistic to get our hands around that.

Is that something the Court would be agreeable to putting out until after the MDL decision?

THE COURT: Let me hear from counsel for plaintiff who wants to be heard on that issue. It's an important issue and it's not an easy one.

Mr. Kelley.

MR. KELLEY: It's not easy negotiating those things. But it would seem to me that it's something that we ought to go ahead and get started on pretty quickly because of the lead time that goes into the document productions.

So really with an ESI order, they are pretty standard. I appreciate the fact that you have got to under

your client's computer system and all of that, but I would think that VW would be pretty far along in that given the onslaught that has occurred.

So I would suggest that we try to get something negotiated and to you in 30 days instead of 60.

THE COURT: Why don't we start by plaintiffs notifying Volkswagen of the discovery that they are -- the electronic discovery they're seeking. And that may include search terms, it may include locations where, to the extent you have any idea at this stage, you believe documents may exist. And at least give notice as to what's coming down the pike. And then we'll let Volkswagen respond to that.

How about that?

MR. KELLEY: I think we can do that within two weeks.

THE COURT: All right. Why don't you try and get that together, 14 days. And notify Volkswagen of that. Send me a copy of that so I can track it.

And then we'll give -- well, if we give you 14 days, that gets you into early November, and then we get into the middle of December. Go ahead.

MR. WILBURN: If I may, just as an example. The ESI protocol that was utilized in the Lumber Liquidators' case, which is the other MDL in this court, the case was filed in July, and it was just resolved about a week or two ago. And the complexity of the case that we are in front of the Court on

now dwarfs, frankly, what is taking place with Lumber Liquidators.

So this isn't really something that from our side that we would be in a position to respond to I think inside of 60 days. And again, in that case it took a period of many months.

THE COURT: Yeah.

MR. BUCKLEY: Additionally, Your Honor, this case I think everybody agrees and most of the parties have asked that it will go to the MDL and the transferee judge. And we've stated a preference for this court in addition to another forum. But the transferee judge will have to develop an ESI plan that includes all of the stakeholders. And they are far more than the stakeholders that are in this room today.

And so, that I think is an example -- I appreciate counsel providing us with ESI, what their suggestion of what it would be, but in all fairness I think we really do need to see the ESI suggestions of the other stakeholders that are almost certainly going to be before this court or the MDL in order to process a reasonable response.

What I would ask is that the Court not order that issue, although we're certainly happy to receive and work with and engage plaintiffs' counsel on their ESI suggestion, but until after the decision on MDL. And either come back to this Court and the Court can follow-up on this program or to go

VW FOIA, EPA 06/20/2017 2017-FFP_035317

somewhere. But at least at that point all the stakeholders will have a voice in ESI, and we'll be doing it or responding to it just one time.

THE COURT: Well, in theory, of course, Volkswagen is going to have a unified position on all cases as to what discovery they think is necessary under the rules. So I'm not sure that your position is going to change all that much as you move forward, but there may be new plaintiffs' requests that are outside those that we hear about in a couple of weeks.

So -- yes, sir.

MR. McNAMARA: Yes, Your Honor. It's Doug McNamara from Cohen Milstein. And I have been part of the negotiations with Mr. Trible and the rest of McGuire Woods with regard to the Lumber Liquidators ESI orders.

And just to give Your Honor some background, that was not begun on July 2. There was the parts of finding, getting counsel and lead counsel appointed. The process, the bulk of the ESI protocol was agreed to. And some of the things that Judge Kelley talked about could get done very quickly.

Aspects of it took a little longer than it had to because of -- not even because of search terms, but sort of deadlines as to when a second group of custodians might be found, and also conforming with -- the judge by that time had a discovery plan.

So a lot of it can get done very quickly. And to the

extent that we have to talk to other stakeholders in New Jersey, we have worked with Mr. Cecchi and the persons who were assigned to interim counsel in New Jersey. We have also worked with Mr. Sarko and I know also folks from his firm here at Keller Rohrback.

The stakeholders who are involved as interim coordinating counsel in other places can give us feedback, so I don't imagine it would be nearly as complicated and I don't think it would take 60 days.

Thank you.

MR. PORTER: Your Honor, if I may. Gregory Porter from Bailey Glasser and Mr. Steffensen. I think regardless of how the deadlines are set for presenting a national ESI protocol, I do think Your Honor can order Volkswagen to immediately commence the kind of gathering of information, the inventory of the locations of information, and the custodians, and the types of information, and where it's all located. There is no reason to delay that for any reason whatsoever.

THE COURT: All right, thank you.

I have no doubt that they are doing exactly that because I'm sure that counsel has told them to do exactly that.

Let's do this. 30 days after you receive the proposed protocol on the electronic discovery, and the parameters suggested as to where and how to search for those records, you investigate with your client the feasibility of

doing so, you respond by letter to plaintiffs with a copy to the Court saying that you are agreeable to moving forward on this or you are not agreeable to moving forward on that.

Obviously, the discovery can't be ordered until I think a judge has been chosen by the Panel. I am not going to order discovery. I think that's going too far. I think a judge should have full control over the discovery process who is going to hear the case.

But I do think that you should be -- I'm sure you are in constant contact, or your co-counsel are, and gathering document. This will put you on notice as to what's being sought. And you are to notify your client immediately as to what that discovery consists of, and get feedback from your client, and notify the parties 30 days after you have had a chance to speak with counsel.

All right.

MR. WILBURN: Yes, Your Honor.

THE COURT: All right. Yes, sir.

MR. WILBURN: The last point on this, I may have mentioned it earlier, and I apologize if I have not done that, I am being repetitive.

We are here on behalf of the U.S. entity only. There has been some discussion --

THE COURT: Yes.

MR. BUCKLEY: -- by I think plaintiffs' counsel or

even perhaps the Court about Germany or the parent company. And they still do need to be served by some or all of the plaintiffs. I don't believe they have been served in any case.

THE COURT: You know, there is no way to get at the foreign company without service, I don't think. And I know there are issues going on there. I don't know what obligation you believe you have to notify the German entity that there is discovery being sought.

I will tell you without question that if an issue like that comes up where evidence has been destroyed, Germany is resisting discovery, that there is any claim being made that they just didn't know about what was going on and they are unprepared to move forward for six months or whatever, that won't be looked at very favorably.

You have a duty to notify Germany and tell them what's going on and what is expected of them. Whether they can be formally required to provide discovery is an entirely different issue, but not the notice.

MR. WILBURN: Your Honor, and I didn't suggest that, I didn't suggest the service issue to create or suggest there is some loophole. We are in contact with our clients, and they do understand their obligations.

But I did want to be clear since we have sort of loosely talked about Volkswagen, who we have entered an appearance for, and that nothing today absolves the plaintiffs

of service in the ordinary course with respect to the Federal Rules.

THE COURT: Well, I am sure you have been asked to waive service. And your position is that presently there is no waiver anticipated, and that's a decision that the parent company makes.

So you're right, we have been loosely talking about Volkswagen, but all the discovery is in Germany. The parties responsible are evidently in Germany. The decision making ultimately will be from Germany. And so, disclosure to the German entity I think of what has happened here and what is expected should be made immediately.

MR. WILBURN: We are in regular contact and will be right after this hearing with our client, Your Honor.

THE COURT: Okay. There are also Sherman Antitrust Act claims, racketeering claims brought by one or more of the plaintiffs. I think Mr. DiMuro and Mr. Kelley on behalf of Bourn, and I think there is one other one, a securities fraud action.

Do you anticipate those cases will go to the judge who is handling the Panel?

MR. WILBURN: I think they will, Your Honor. I think those are appendant litigation to what are clearly related action and would go to the transfer --

THE COURT: They would all?

VW FOIA, EPA 06/20/2017 2017-FFP_035322

MR. WILBURN: I think they will, to the transferee judge. And that would be our position.

THE COURT: I would think so, but I wasn't sure. I am just unfamiliar enough about what the Panel would do, whether they would sever those out because they are a little different.

MR. WILBURN: They could, and they may. I don't think they need to, and I don't think that would be an efficient use of resources.

And I am not sure whether Mr. DiMuro and his clients want that to occur. But we think all of these related actions will be decided or be handled by the transferee judge either here or somewhere else.

THE COURT: Okay. All right.

MR. KELLEY: We anticipate the same thing.

THE COURT: Mr. DiMuro, do you agree?

MR. DiMURO: I agree with Mr. Kelley.

THE COURT: Okay.

MR. WILBURN: And with me.

THE COURT: All right. Anything else that we can discuss this morning? I have got somebody coming up behind you here.

MR. BURNS: Your Honor, Warren Burns with Burns Charest. Thank you for gathering us here today. It sounds like we have a full slate, which is certainly what many of us

VW FOIA, EPA 06/20/2017 2017-FFP_035323

have encouraged.

I just wanted to know whether the Court wished to entertain submissions from plaintiffs' counsel for the leadership positions, or how you would like us to handle that. But it occurs to me we need to do that quickly.

THE COURT: Yeah, I agree with you. And I think that counsel should all get together, discuss it, discuss it with Mr. Dolan, who I have appointed to lead the discussion.

But I certainly, as I have said earlier, if there are two or three firms and entities that believe -- that the parties believe should be included in that, that's fine with me.

I don't want 12 interim lead counsel. You know, I have worked with Mr. Toll previously, and several other firms that have appeared in like cases with excellent results.

So I will leave that up to you to get together and work on two or three counsel that can work with the rest of counsel for just the next couple of months.

MR. BURNS: Certainly, Your Honor.

THE COURT: Okay.

MR. BURNS: Thank you.

THE COURT: All right. Anything else? All right, we will issue an order. You all get started. Hopefully the Panel won't decide to adjourn until February or March, and we will get a decision from them. And if it's their decision, I look

VW FOIA, EPA 06/20/2017 2017-FFP_035324

forward to seeing you in the new year.

Thank you all. Have a good weekend.

All right, we are in recess.

HEARING CONCLUDED

I certify that the foregoing is a true and accurate transcription of my stenographic notes.

Attorneys for Plaintiff CHRISTOPHER J. D'ANGELO and all others similarly situated

UNITED STATES DISTRICT COURT

CENTRAL DISTRICT OF CALIFORNIA

CHRISTOPHER J. D'ANGELO, an individual on behalf of himself and all others similarly situated,

Plaintiff,

vs.

VOLKSWAGEN GROUP OF AMERICA, INC., a New Jersey Corporation and VOLKSWAGEN AG, a German corporation,

Defendants.

Case No.: 2:15-cv-07390-DOC (SPx)

PLAINTIFF CHRISTOPHER J. D'ANGELO'S NOTICE OF MOTION AND MOTION AND MEMORANDUM OF POINTS AND AUTHORITIES IN SUPPORT OF MOTION FOR CLASS CERTIFICATION

Date: **November 23, 2015**
Time: **8:30 a.m.**
Ctrm.: **9D**
Judge: **Hon. David O. Carter**

TO ALL PARTIES AND TO THEIR ATTORNEYS OF RECORD:

PLEASE TAKE NOTICE that on November 23, 2015 at 8:30 a.m., or as soon thereafter as the matter may be heard in Courtroom 9D before the Honorable David O. Carter, of the above-entitled Court located at 411 W. Fourth Street, Santa Ana, California 92701, Plaintiff Christopher J. D'Angelo ("Plaintiff") will, and hereby does, move pursuant to Rule 23 of the *Federal Rule of Civil Procedure* ("Rule 23")

VW FOIA, EPA 06/20/2017 2017-FFP_035327

and California *Civil Code* Section 1781(b) to certify the following classes of plaintiffs:

- **CLASS 1: All owners or lessees of VW Clean Diesel Vehicles[1] who purchased or leased a new or used such vehicle in the Unites States or its territories and protectorates from an authorized VW dealership between 2008 and the present ("the Class Period") that contained software designed to hide the vehicle's true emission levels,[2]**
- **CLASS 2: All owners of VW Clean Diesel Vehicles as of September 18, 2015 who did not purchase their VW Clean Diesel Vehicle from an authorized VW dealership.**

[1] VW's Clean Diesel vehicles include the following models and shall be referred to herein as "VW Clean Diesel Vehicles":

Year	EPA Test Group	Make and Model
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGAV02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

[2] Excluded from the Classes are the judges to whom this case is or will be assigned and any member of those judges' immediate families.

VW FOIA, EPA 06/20/2017 2017-FFP_035328

In addition, Plaintiff is seeking to certify two subclasses comprised of:

- **SUBCLASS 1: All Class 1 Members who purchased or leased their VW Clean Diesel Vehicle in California during the Class Period.**
- **SUBCLASS 2: All Class 2 Members whose VW Clean Diesel Vehicles were registered in California as of September 18, 2015.**

This motion is being brought at this time pursuant to Rule 23(c)(1)(A) and Local Rule 23-3. Rule 23(c)(1)(A) requires that "[a]t an early practicable time after a person sues or is sued as a class representative, the court must determine by order whether to certify the action as a class action." Consistent with this Rule, Local Rule 23-3 requires that within 90 days of service of the complaint, "the proponent of the class *shall* file a motion for certification that the action is maintainable as a class action, unless otherwise ordered by the Court." (Emphasis added).[3] Given Defendants' public admissions of wrongdoing, there is no good reason to delay the bringing of such a motion in this case.

This Motion is based upon this Notice of Motion, the accompanying Memorandum of Points and Authorities in Support of Plaintiff's Motion for Class

[3] Plaintiff D'Angelo has filed a motion before the Multi-District Panel seeking to consolidate all of the more than 100 class action cases filed in federal courts across the nation in this Court. Currently, that motion is schedule to be heard on December 3, 2015. See MDL No. 2672 (Document No. 26). Plaintiff served his complaint on Volkswagen Group of America, Inc. on September 22. Thus, the 90 day limit under Local Rule 23-3 will have already expired by the time of the JPML hearing. Plaintiff further believes that in this case an early certification ruling will benefit the class by: (1) establishing an attorney client relationship that will prevent VW from communicating directly with the Class Members (including about its recently announced plan for a recall) in an unsupervised manner; (2) assist in the settlement process; and (3) will avoid any potential that VW could attempt what was done in the *Campbell-Ewald Company v. Gomez* case now pending before the Supreme Court -- involving whether a defendant to an uncertified class action case can derail the class action by picking off the class representative's claim by making an offer of complete settlement. See 135 S.Ct. 2311. While Plaintiff does not believe that VW can moot his claims because of his request for punitive damages, an early certification order will eliminate this potential entirely.

VW FOIA, EPA 06/20/2017 2017-FFP_035329

Certification, the Declarations of David J. Vendler and Christopher J. D'Angelo, the pleadings on file in this action, and upon such other matters, evidence, and arguments as may be presented to the Court before or at the hearing on the Motion.

This motion is made following the conference of counsel pursuant to L.R. 7-3 which took place on (date).

Date: October 19, 2015

MEMORANDUM OF POINTS AND AUTHORITIES

I. INTRODUCTION

This action arises from defendant Volkswagen Group of America, Inc.'s and Volkswagen AG's (collectively "VW") admitted cheating of American automotive consumers (including Plaintiff) -- and government regulators -- by touting the supposedly "clean" nature of its diesel cars in its national "Clean Diesel" advertising campaign, while knowing that the vehicles' engine management system included software to hide their actual emission rates during governmental testing. Shockingly, VW has admitted that it intentionally designed and installed these electronic cheating devices ("defeat devices") to detect when the vehicles were being tested, and that it knew that during normal operation, its supposedly "Clean Diesel" cars polluted the environment at rates substantially above federal and California-compliant levels. In fact, the EPA and California Air Resource Board have determined that these "Clean Diesel" automobiles produce nitrogen oxide at levels 10 to 40 times above EPA-compliant levels when being driven in normal use.

Plaintiff filed his class action Complaint seeking damages from VW and/or equitable relief (including injunctive relief, rescission and restitution) on behalf of himself and the classes of persons (nationwide and in California) that have been similarly affected by VW's misrepresentations about these *non*-Clean Diesel Vehicles.

Plaintiff's First Amended Complaint asserts the following claims against VW:

1. Violations of the Consumer Legal Remedies Act ("CLRA"), codified at Cal. Civ. Code §§ 1750, et seq.;
2. Negligent misrepresentation;
3. Intentional Misrepresentation (Fraud);
4. Violations of the Unfair/Deceptive Business Practices Act (Cal. Bus. & Prof. Code §§ 17200, et seq.);
5. Violations of the False Advertising Laws (Cal. Bus. & Prof. Code §§ 17500, et seq.);

VW FOIA, EPA 06/20/2017 2017-FFP_035336

6. Violation of Song-Beverly Consumer Warranty Act and the California Commercial Code; and

7. Violation of the Magnuson–Moss Warranty Act.

II. STATEMENT OF MATERIAL FACTS

A. VW'S OBLIGATIONS TO REPORT THE INSTALLATION OF AECDS

Light-duty vehicles (such as the VW Clean Diesel Vehicles) must satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. § 86.1811-04. The EPA administers a certification program to ensure that every vehicle introduced into United States commerce satisfies applicable emission standards. Under this program, the EPA issues certificates of conformity (COCs), and thereby approves the introduction of vehicles into United States commerce. Without such a certificate, VW could not have sold its Clean Diesel Vehicles in the United States.

In order to obtain a COC, a light-duty vehicle manufacturer such as VW must submit a COC application to the EPA for each test group of vehicles that it intends to enter into United States commerce. 40 C.F.R. § 86.1843-01. The COC application must include, among other things, a list of all auxiliary emission control devices (AECDs) installed on the vehicles. 40 C.F.R. § 86.1844-01(d)(11).

An AECD is "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying, or deactivating the operation of any part of the emission control system." 40 C.F.R. § 86.1803-01. The COC application must also include "a justification for each AECD, the parameters they sense and control, a detailed justification of each AECD that results in a reduction in effectiveness of the emission control system, and [a] rationale for why it is not a defeat device." 40 C.F.R. § 86.1844-01(d)(11).

A defeat device is an AECD "that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered

VW FOIA, EPA 06/20/2017 2017-FFP_035337

in normal vehicle operation and use, unless: (1) Such conditions are substantially included in the Federal emission test procedure; (2) The need for the AECD is justified in terms of protecting the vehicle against damage or accident; (3) The AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only for emergency vehicles . . . ." 40 C.F.R. § 86.1803-01.

Motor vehicles equipped with defeat devices, such as those at issue here, cannot be certified. EPA, Advisory Circular Number 24: Prohibition on use of Emission Control Defeat Device (Dec. 11, 1972); see also 40 C.F.R. §§ 86-1809-01, 86-1809-10, 86-1809-12. "Vehicles are covered by a certificate of conformity only if they are in all material respects as described in the manufacturer's application for certification . . ." 40 C.F.R. § 86.1848-10(c)(6). For this reason, COC's issued by EPA, including those issued to VW, state expressly, "[t]his certificate covers only those new motor vehicles or vehicle engines which conform, in all material respects, to the design specifications" described in the application for that COC. See also 40 C.F.R. §§ 86.1844-01 (listing required content for COC applications) and 86.1848-01(b).

The Clean Air Act ("CAA") also makes it a violation "for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should know that such part or component is being offered for sale or installed for such use or put to such use." CAA § 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B); 40 C.F.R. § 86.1854-12(a)(3)(ii).

Additionally, manufacturers are prohibited from selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing, any new motor vehicle unless that vehicle is covered by an EPA-issued COC. CAA § 203(a)(1), 42 U.S.C. § 7522(a)(1); 40 C.F.R. § 86.1854-12(a)(1).

VW FOIA, EPA 06/20/2017 2017-FFP_035338

B. VW'S WRONGFUL CONDUCT

According to the EPA and California's Air Resource Board ("CARB"), the VW Clean Diesel Vehicles have AECDs that were not described in VW's application(s) for the COC covering the subject vehicles. See EPA and CARB reports attached to the Declaration of David J. Vendler ("Vendler Dec.") as Exhibits "A" and "B."[4] According to the EPA and CARB, VW manufactured and installed software in the electronic control module (ECM) of the VW Clean Diesel Vehicles which both the EPA and CABR call the "switch."

The "switch" senses whether VW Clean Diesel Vehicles are being tested based on various inputs including (but not limited to) the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. These inputs track the parameters of the federal test procedure used for emission testing for EPA certification purposes. During EPA emission testing, the VW Clean Diesel Vehicles' ECM ran software which re-tuned the engine to produce compliant emission results under an ECM calibration that VW referred to as the "dyno calibration" (referring to the equipment used in emissions testing, called a dynamometer). However, during normal vehicle operation, the "switch" was activated and the vehicle ECM software ran a separate "road calibration" which re-tuned the engine to substantially reduce the effectiveness of the emission control system (specifically the selective catalytic reduction or the lean NOx trap), but improved the vehicle's performance. As a result, under normal road conditions, emissions of NOx increased by a factor of 10 to 40 times above the EPA-compliant levels, depending on the type of drive cycle (e.g., city, highway). See Exhibits "A" and "B."

The EPA and CARB were alerted to the emissions problems with these vehicles in May 2014 when the West Virginia University's (WVU) Center for Alternative Fuels, Engines & Emissions published results of a study commissioned by the International

[4] Plaintiff has requested the Court to take judicial notice of these governmental reports.

VW FOIA, EPA 06/20/2017 2017-FFP_035339

Council on Clean Transportation that found significantly higher in-use emissions from two light duty diesel vehicles (a 2012 Jetta and a 2013 Passat). See Vendler Dec., Exhibit "C."

Over the course of the year following the publication of the WVU study, VW continued to assert to CARB and the EPA that the increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions. See Exhibits "A" and "B." In fact, VW issued a voluntary recall in December 2014 to address the issue. *Id.* at pp. 4 and 2, respectively. After the recall, CARB, in coordination with the EPA, conducted follow up testing of these vehicles both in the laboratory and during normal road operation to confirm the efficacy of the recall. When the testing showed only a limited benefit to the recall, CARB broadened the testing to pinpoint the exact technical nature of the vehicles' poor performance, and to investigate why the vehicles' onboard diagnostic system was not detecting the increased emissions. None of the potential technical issues suggested by VW explained the higher test results consistently confirmed during CARB's testing.

It was only when it became clear that VW was going to lose its U.S. market -- because CARB and the EPA were not going to approve certificates of conformity for VW's 2016 model year Clean Diesel Vehicles -- that VW finally admitted the existence of the defeat device which had not been disclosed in its prior COC applications. As Volkswagen Group of America, Inc.'s CEO Michael Horn stated at a press conference about the installation of the defeat devices, "our company was dishonest." See Vendler Dec., Exhibit "D." Mr. Michael Horn reiterated VW's wrongdoing in his testimony on October 8, 2015 before the House Energy and Commerce subcommittee at its hearing on false emissions readings from diesel-powered vehicles manufactured by VW. See Vendler Dec., Exhibits "J" and "K" in which Mr. Horn stated, *inter alia*:

> We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators… VW installed the defeat devices for the purpose of defeating EPA regulations... I again apologize on behalf of

VW FOIA, EPA 06/20/2017 2017-FFP_035340

> everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.[5]

Similar admissions of VW's fraudulent conduct were also made by Prof. Dr. Martin Winterkorn, the former CEO of VW's parent, Volkswagen AG, just before his resignation. See Vendler Dec., Exhibits "I" and "J."

Because the VW Clean Diesel Vehicles do not conform in material ways to the vehicle specifications described in the COC application(s), VW violated section 203(a)(1) of the CAA, 42 U.S.C. § 7522(a)(1) each time it sold, offered for sale, introduced into commerce, delivered for introduction into commerce, or imported the hundreds of thousands of VW Clean Diesel Vehicles that it sold or leased to class members. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the "switch."

Yet, despite its knowledge that it was systematically violating U.S. law, VW not only sold and leased these vehicles to U.S. consumers, but "doubled down" on its wrong by focusing its entire marketing campaign on their supposedly "clean" nature and publicizing itself as an environmentally conscientious company. It can honestly be said that the moniker "Clean Diesel" was the centerpiece/pillar of all of VW's advertising. In its nationally advertised television campaigns, VW deliberately targeted people like plaintiff who are environmentally conscious with comparisons of its "clean" high performance cars to sluggish and dirty diesels put out by its competition. This national campaign even resulted in VW being able to successfully charge a price premium over its comparable gas-powered vehicles. D'Angelo Dec., ¶ 3. And see Vendler Dec., Exhibits "E" - "H."

VW's marketing effort was so successful that VW became the largest seller of

[5] Mr. Horn's full October 8, 2015 testimony before Congress is attached to the Vendler Dec. as Exhibit "L."

VW FOIA, EPA 06/20/2017 2017-FFP_035341

diesel passenger vehicles in the United States. But the truth is that VW's claims were all a lie. See Vendler Dec., Exhibits "D," "I" and "J." These (more expensive) cars actually produced emissions at levels far beyond those allowed by federal and state regulations. See Vendler Dec., Exhibits "A" and "B." Worse, when questions began to arise, VW knowingly attempted to conceal the truth about what it had done. *Id.*

C. The Proposed Class Members' Claims Do Not Materially Differ

Plaintiff and his fellow Class Members all purchased or leased VW Clean Diesel Vehicles based on VW's specific representations (made nationwide as part of VW's national advertising campaign) that the VW Clean Diesel Vehicles were both (1) fuel efficient and (2) environmentally "clean." D'Angelo Dec., ¶¶ 3-4. Many examples of VW's national marketing campaign materials prominently uniformly advertising the "cleanliness" of its diesel vehicles are also attached to the Vendler Dec. as Exhibits "E" -"H."[6] Based on the information published by the E.P.A and other state regulatory agencies, and VW's recent admissions about its wrongdoing, Plaintiff learned that the VW's representations about his and other Class Member cars were demonstrably false. He has also learned that the representation that VW's Clean Diesel Vehicles were represented to meet governmental pollution standards and that they don't.

VW's intentional and reckless decision to: (1) design and an install the defeat devices in the VW Clean Diesel Vehicles, (2) misrepresent the true nature of the VW Clean Diesel Vehicles in its nationwide advertising campaign, (3) hide the vehicles' impact on the environment, and (4) charge consumers premiums for supposedly environmentally "clean" cars, has negatively affected Plaintiff and all Class Members uniformly. Not only are the VW Clean Diesel Vehicles that Plaintiff and the Class Members own or lease polluting the environment beyond allowable state and federal limits, but the value of all of these vehicles has instantly plummeted. Further, it

[6] VW's authorized dealerships are agents of VW and rely for their sales on VW's national advertising campaigns, including the "Clean Diesel" advertisements relied on by Plaintiff and other class members.

VW FOIA, EPA 06/20/2017 2017-FFP_035342

appears certain that any "fix" implemented by VW will substantially lessen the vehicles' performance characteristics since the whole purpose of the defeat device was to retain performance while fooling emissions testing. Like all class members, Plaintiff paid a premium for his vehicle based on the misrepresentations that it was not only fuel efficient, but that it was not "sluggish" like other diesels and was "clean" for purposes of the environment. Plaintiff would not have paid this additional premium (or bought the car at all) if he had known the truth about the vehicle's actual characteristics. D'Angelo Dec., ¶ 4.

The Ninth Circuit has held that fraud claims predicated on common documents are ideally suited for class treatment and should be certified. See *Yokoyama v. Midland Nat'l Life Ins. Co.*, 594 F.3d 1087 (9th Cir. 2009) (reversing denial of class certification where plaintiffs based their lawsuit on nondisclosures in standardized written forms). District courts within the Ninth Circuits have also so held. See *Rodman v. Safeway, Inc.*, 2014 WL 988992 *11 (N.D.Cal. 2014) (class action plaintiffs can avoid the need to show each class member's individual reliance by resorting to California law's presumption of common reliance where "the entire class saw the misrepresentations or was exposed to a pervasive long-term advertising campaign").

As in *Yokoyama*, the fraudulent omissions in VW's applications to the EPA and CARB, as well as its blatant misrepresentations to consumers (made via its national TV campaign and print media advertisements), affected all of the Class Members equally.[7] Plaintiff thus seeks to certify the following classes of plaintiffs:

[7] Even if some class members managed not to see VW's "Clean Diesel" advertisements, this would not matter since the pervasiveness of the advertising campaign lifted the overall market for these cars, which deflated just like a stock immediately after VW's admission of wrongdoing. See *Blackie v. Barrack*, 524 F.2d 891, 907 (C.A.9 1975) ("we eliminate the requirement that plaintiffs prove reliance directly in this context because the requirement imposes an unreasonable and irrelevant evidentiary burden. A purchaser on the stock exchanges may be either unaware of a specific false representation, or may not directly rely on it; he may

VW FOIA, EPA 06/20/2017 2017-FFP_035343

- CLASS 1: All owners or lessees of VW Clean Diesel Vehicles who purchased or leased a new or used such vehicle in the Unites States or its territories and protectorates from an authorized VW dealership between 2008 and the present ("the Class Period") that contained software designed to hide the vehicle's true emission levels,
- CLASS 2: All owners of VW Clean Diesel Vehicles as of September 18, 2015 who did not purchase their VW Clean Diesel Vehicle from an authorized VW dealership.

In addition, Plaintiff is seeking to certify two subclasses comprised of:

- SUBCLASS 1: All Class 1 Members who purchased or leased their VW Clean Diesel Vehicle in California during the Class Period.
- SUBCLASS 2: All Class 2 Members whose VW Clean Diesel Vehicles were registered in California as of September 18, 2015.

III. ARGUMENT

A plaintiff seeking to represent a class must demonstrate that: "(1) the class is so numerous that joinder of all members is impracticable; (2) there are questions of law or fact common to the class; (3) the claims and defenses of the representative parties are typical of the claims or defenses of the class; and 4) the respective parties will fairly and adequately protect the interests of the class." Fed. R. Civ. P. 23(a); *Amchem Prods., Inc. v. Windsor*, 521 U.S. 591, 613 (1997).

Additionally, the moving party must satisfy at least one of the requirements of

---

purchase because of a favorable price trend, price earnings ratio, or some other factor. Nevertheless, he relies generally on the supposition that the market price is validly set and that no unsuspected manipulation has artificially inflated the price, and thus indirectly on the truth of the representations underlying the stock price whether he is aware of it or not, the price he pays reflects material misrepresentations. Requiring direct proof from each purchaser that he relied on a particular representation when purchasing would defeat recovery by those whose reliance was indirect, despite the fact that the causational chain is broken only if the purchaser would have purchased the stock even had he known of the misrepresentation. We decline to leave such open market purchasers unprotected.")

VW FOIA, EPA 06/20/2017 2017-FFP_035344

Rule 23(b). Here, Plaintiff seeks to certify the proposed classes and subclasses under Rule 23(b)(3) because: (i) common questions of law or fact predominate over individual questions; and (ii) "a class action is superior to other available methods for fairly and efficiently adjudicating the controversy." Fed. R. Civ. P. 23(b)(3).[8]

Although the Court must examine the issues closely to determine whether a proposed class is appropriate for certification, Rule 23 grants the district court "broad discretion to determine whether a class should be certified, and to revisit that certification throughout the legal proceedings before the court." *Galvan v. KDI Distribuation* [sic] Inc., No. SACV 08-0999-JVS (ANx), 2011 WL 5116585, at *3

---

[8] The standard for certification for Plaintiff's CLRA claim is different. It is set forth in *Civil Code* Section 1781(b). While the decision to certify a class under Rule 23 rests within the sound discretion of the trial court, there is no such discretion provided for under Civil Code Section 1781(b). If the consumer demonstrates the four elements required under Section 1781(b), class certification **must** be granted. See *Hogya v. Superior Court*, 75 Cal. App. 3d 122 (1977) and *Caro v. Procter & Gamble Co.*, 18 Cal. App. 4th 644, 657 (1993). *Civil Code* Sections 1781(a) and (b) provide:

> (a) Any consumer entitled to bring an action under Section 1780 may, if the unlawful method, act, or practice has caused damage to other consumers similarly situated, bring an action on behalf of himself and such other consumers to recover damages or obtain other relief as provided for in Section 1780.
> (b) The court **shall** permit the suit to be maintained on behalf of all members of the represented class if all of the following conditions exist.
> (1) It is impracticable to bring all members of the class before the court.
> (2) The questions of law or fact common to the claims are substantially similar and predominate over the questions affecting the individual members.
> (3) The claims or defenses of the representative plaintiffs are typical of the claims or defenses of the class.
> (4) The representative plaintiffs will fairly and adequately protect the interests of the class. (Emphasis added).

As stated in *Hogya*, "[W]e hold Civil Code section 1781, subdivision (b), establishes exclusive criteria for class certification in suits brought pursuant to the Consumers Legal Remedies Act. If the statutory criteria are satisfied, a trial court is under a duty to certify a class **and is vested with no discretion to deny certification based upon other considerations**." (Emphasis added). *Id.* at 75 Cal. App. 3d 140.

VW FOIA, EPA 06/20/2017 2017-FFP_035345

(C.D. Cal. Oct. 25, 2011) (quoting *Armstrong v. Davis*, 275 F.3d 849, 872 n.28 (9th Cir. 2001)). The Court "need only form a 'reasonable judgment' on each certification requirement," taking the complaint's allegations as true and declining to make merits determinations. Id. (internal citations omitted).

A. This Case is Ideally Suited For Class Treatment.

Class treatment is appropriate where, as here, a large group has been adversely affected by a common scheme perpetrated by an auto manufacturer. See *Chamberlan v. Ford*, 223 F.R.D. 524 (N.D. Cal. 2004) and *Johnson v. General Mills, Inc.*, 276 F.R.D. 519, 521 (C.D.Cal. 2011) (motion for decertification denied since all class members' claims shared a common contention that "Defendants made a material misrepresentation regarding the digestive health benefits of YoPlus.")

In *Chamberlan* Ford was accused of concealing a design defect in violation of the CLRA. The class was made up of over 150,000 consumers who had purchased vehicles containing the vehicle component in question and all of the members of the proposed class had claims arising from the same alleged fraudulent concealment by Ford. Because the court found that the proposed class satisfied the requirements of both F.R.C.P. § 23(a) and 23(b), the Court certified the class. *Id.*

As in *Chamberlan*, VW made material misrepresentations to the public at large about the true nature of the VW Clean Diesel Vehicles in both nationally advertised TV commercials and written advertisements. It also lied to regulators in order to be able to sell its vehicles in the U.S. The undisclosed installation of the defeat device in each of the proposed class members' VW Clean Diesel Vehicles is the central focus of all of the Class Member claims. Indeed, on October 9, 2015, VW admitted in testimony before Congress that to fix its "class-wide" wrong, i.e. the defeat device, it is going to recall all of its Clean Diesel Vehicles beginning in January/February. See Vendler Dec., Exhibit "K." In short, the proposed class will be able to establish liability through proof common to the entire proposed class.

VW FOIA, EPA 06/20/2017 2017-FFP_035346

B. The Proposed Class is Sufficiently Ascertainable.

Despite the fact that Rule 23 does not specifically require that a proposed class be ascertainable, courts have implicitly required such a showing. *Galvan v. KDI Distribuation [sic] Inc.*, No. SACV 08-0999-JVS (ANx), 2011 WL 5116585 (C.D. Cal. Oct. 25, 2011) (citing *Xavier v. Phillip Morris USA, Inc.*, 787 F. Supp. 2d 1075, 1089 (N.D. Cal. 2011)). Ascertainability is satisfied as long as it is administratively feasible for the court to ascertain whether an individual is a member of the class. *O'Connor v. Boeing N. Am., Inc.*, 184 F.R.D. 311, 319 (C.D. Cal. 1998).

The Class definitions that have been proposed by Plaintiff employ objective criteria that make class membership demonstrably verifiable. The purchase or lease of a VW Clean Diesel Vehicle (specified by model and year) is straightforward, and Class members can be readily identified via VW's sales and lease documents. Indeed, VW is admitting as much by its announcement of a recall program to "fix" its cars. Further, Class members who did not purchase or lease from VW directly can self-identify through their own DMV registration materials or insurance documents.

Classes like the one proposed here have been approved in this district. See *Parkinson v. Hyundai Motor Am.*, 258 F.R.D. 580, 593-94 (C.D. Cal. 2008) (finding ascertainability when, as is the case here, the class definition identified the make, model and model year for the class vehicle); *Keilholtz v. Lennox Hearth Prods. Inc.*, 268 F.R.D. 330, 336 (N.D. Cal. 2010) (finding ascertainability when unnamed plaintiffs would be able to identify the allegedly defective goods themselves). Based on the above, Class Members are objectively ascertainable.

C. The Rule 23 (a) Factors Are Easily Satisfied.

1. The Class Is Sufficiently Numerous

Rule 23(a)(1) requires that the class be "so numerous that joinder of all members is impracticable." Fed. R. Civ. P. 23(a)(1); see also *Moeller v. Taco Bell Corp.*, 220 F.R.D. 604, 608 (N.D. Cal. 2004); *Hanlon v. Chrysler Corp.,* 150 F.3d 1011, 1019 (9th Cir. 1998). Although there is no hard and fast rule concerning the

VW FOIA, EPA 06/20/2017 2017-FFP_035347

size of a proposed class, "[g]enerally speaking, courts will find that the 'numerosity' requirement has been satisfied when the class comprises 40 or more members, and will find that it has not been satisfied when the class comprises 21 or fewer." *Ansari v. New York Univ.* (SD NY 1998) 179 FRD 112, 114; *Menagerie Prods. v. Citysearch*, No. CV 08-4263 CAS (FMO), 2009 WL 3770668, at *4 (C.D. Cal. Nov. 9, 2009). Here, the numerosity requirement is satisfied because hundreds of thousands of Clean Diesel Vehicles were sold in the United States during the Class Period (See Vendler Dec., Exhibit "B" -- CARB's September 18, 2015 notice to VW which specifies that there are at least 500,000 VW Clean Diesel Vehicles that were sold in the United States).

2. Questions of Law and Fact Common to the Class Exist.

Rule 23(a)(2) requires that there be "questions of law or fact common to the class." Fed. R. Civ. P. 23(a)(2). This provision is neither exacting nor difficult to satisfy. *Hanlon v. Chrysler Corp.*, 150 F.3d 1011, 1019 (9th Cir. 1998) ("Rule 23(a)(2) has been construed permissively. All questions of fact and law need not be common to satisfy the rule. The existence of shared legal issues with divergent factual predicates is sufficient, as is a common core of salient facts coupled with disparate legal remedies within the class."). Indeed, a single significant common issue is sufficient to satisfy Rule 23(a)(2). *In re THQ, Inc. Secs. Litig.*, No. CV00-1783AHM (EX), 2002 WL 1832145, at *11 (C.D. Cal. Mar. 22, 2002); *Mazza v. Am. Honda Motor Co.,* 666 F.3d 581, 589 (9th Cir. 2012). In short, class members' claims must "depend upon a common contention" such that "determination of its truth or falsity will resolve an issue that is central to the validity of each [claim] in one stroke." *Id.* at 588 (quoting *Wal-Mart Stores, Inc. v. Dukes*, 131 S. Ct. 2541, 2551 (2011)).

The questions of law and fact that are common to the proposed class include:

a. Whether VW misrepresented the true nature of the VW Clean Diesel Vehicles to consumers in advertisements and written publications

VW FOIA, EPA 06/20/2017 2017-FFP_035348

concerning the characteristics of its supposedly environmentally Clean Diesel Vehicles

b. Whether VW acted intentionally in making false claims about the characteristics of its Clean Diesel vehicles;

c. Whether VW's marketing material for its Clean Diesel Vehicles which claim to be environmentally "clean" and made in compliance with federal and state emission standards violate the "unlawful, unfair or fraudulent" prongs of California's Unfair Competition Law or constitute false advertising under that Law;

d. Whether VW's misrepresentations concerning the VW Clean Diesel Vehicles would be misleading to a reasonable consumer;

e. Whether VW knew, or by the exercise of reasonable care should have known, that the misrepresentations and false advertising concerning the VW Clean Diesel Vehicles would be misleading to a reasonable consumer;

f. Whether VW should be enjoined from engaging in the conduct complained of herein;

g. Whether VW has been unjustly enriched through the wrongful conduct set forth herein;

h. Whether punitive damages should be assessed against VW and in what amount;

i. Whether VW misrepresented information contained in its applications for certificates of conformity for the VW Clean Diesel vehicles to the EPA and similar state environmental agencies concerning the auxiliary emission control devices installed in each of the vehicles;

j. Whether VW installed defeat devices in each of the VW Clean Diesel Vehicles designed to reduce the effectiveness of the emission control system under conditions which may reasonably be expected to be

VW FOIA, EPA 06/20/2017 2017-FFP_035349

encountered in normal vehicle operation and use;

k. Whether VW's recall program of its vehicles is adequate and what the legal effect of that recall is upon class members;

l. Whether VW's misrepresentations concerning the VW Diesel Vehicles' emissions were in breach of VW's express and implied warranties to the contrary.

These questions further all arise from the same common nucleus of facts and law. See, e.g., *Parkinson, supra,* (finding commonality where "plaintiffs' central common question is whether the 2003 manual-transmission Tiburon suffered from a flywheel defect"). Consequently, the determination of these common issues will resolve the central issues of this case for all Class Members in one blow. Based thereon, the commonality requirement is satisfied.

3. Plaintiff's Claims Are Typical of Class Members' Claims.

Rule 23(a)(3) requires that "the claims or defenses of the representative parties are typical of the claims or defenses of the class." Fed. R. Civ. P. 23(a)(3). "Under the rule's permissive standards, representative claims are 'typical' if they are reasonably coextensive with those of absent class members; they need not be substantially identical." *Hanlon*, 150 F.3d at 1020. While some degree of individuality is to be expected in all cases, that does not necessarily defeat typicality. See *Wolin v. Jaguar Land Rover N. Am.*, LLC, 617 F.3d 1168, 1175 (9th Cir. 2010) (finding that typicality is satisfied despite differences in "factual circumstances" and remedies) (citing *Lymburner*, 263 F.R.D. at 540, with approval); see also *Staton v. Boeing*, 327 F.3d 938, 957 (9th Cir. 2003). The "focus should be on the defendants' conduct and plaintiff's legal theory, not the injury caused to the plaintiff." *Costelo v. Chertoff*, 258 F.R.D. 600, 608 (C.D. Cal. 2009) (quoting *Simpson v. Fireman's Fund Ins. Co.*, 231 F.R.D. 391, 396 (N.D. Cal. 2005)).

Here, Plaintiff's claims are typical of the claims of the proposed class because they all arise from the same (admitted) wrongful conduct by VW, namely that VW

VW FOIA, EPA 06/20/2017 2017-FFP_035350

engaged in false advertising and violated environmental protection laws. Because VW's publicity campaign advertising its Clean Diesel Vehicles was national in scope, each of the Class Members were uniformly subjected VW's false and misleading statements, advertisements, and commercials concerning the supposed "clean" nature of the VW Clean Diesel vehicles. In this regard, this case is like *Wolin* which found typicality where the class representatives alleged that "they, like all prospective class members, were injured by a defective alignment geometry in the vehicles," and where "[the class representatives] and the class seek to recover pursuant to the same legal theories: violation of consumer protection laws, breach of warranty, and unjust enrichment."). *Id.* at 1173. Here, too, each of the class members' claims all arise from their purchase or lease of a VW Clean Diesel Vehicle that was falsely advertised as being "clean" and environmentally compliant by VW when it was not. Accordingly, the typicality requirement is satisfied.

4. Plaintiff Will Fairly And Adequately Represent The Class.

Rule 23(a)(4) permits certification of a class action only if "the representative parties will fairly and adequately protect the interests of the class." Fed. R. Civ. P. 23(a)(4). This requires: (i) the proposed representative plaintiff does not have conflicts of interest with the proposed class; and (ii) the plaintiff is represented by qualified and competent counsel. See *Hanlon*, 150 F.3d at 1020; *Keegan v. Am. Honda Motor Co., Inc.*, 284 F.R.D. 504, 525 (C.D. Cal. 2012). The first factor—that there is no conflict of interest—only requires similarity, not identity, of interests, and it precludes only adverse interests. *Satchell v. FedEx Corp.*, Case No. 03-02659 SI, 2005 WL 2397522, at *8 (N.D. Cal. Sept. 28, 2005). To assure "adequate" representation, the class representative's personal claim must not be inconsistent with the claims of other members of the class. *Pickett v. Iowa Beef Processors*, 209 F.3d 1276, 1280 (11th Cir. 2000). Hypothetical conflicts do not preclude a finding of adequacy. If and when the conflicts become real, the court can certify subclasses with separate representation of each, if consistent with manageability. *Kohen v. Pacific*

VW FOIA, EPA 06/20/2017 2017-FFP_035351

Investment Mgmt. Co. LLC, 571 F3d 672, 680 (7th Cir. 2009). Where, as here, the claims of the Class members and named Plaintiff are virtually coextensive, there is no conflict. *General Tel. Co. v. Falcon*, 457 U.S. 147, 157-58, n.13 (1982).

Here, Mr. D'Angelo's interests are completely aligned with those of the proposed class; each has suffered economic loss from the same misrepresentations communicated nationwide by VW. Likewise, Plaintiff's counsel is "adequate." In retaining David Vendler of Morris Polich and Purdy LLP ("MPP"), Plaintiff has employed counsel with the qualifications, experience, and resources to vigorously prosecute this action. See Vendler Dec.,¶ 9-25. Further, if, as Plaintiff expects, his consolidation motion is granted, additional plaintiffs' counsel will be available to assist MPP with the prosecution of the case.

D. The Proposed Class Satisfies Rule 23(b)(3)'s Predominance Requirement.

Because of the nature of Plaintiff's claims—fraudulent misrepresentations concerning the true nature of the VW Clean Diesel Vehicles—Plaintiff seeks certification under Rule 23(b)(3), which requires "that the questions of law or fact common to class members predominate over any questions affecting only individual members, and that a class action is superior to other available methods for fairly and efficiently adjudicating of the controversy." Fed. R. Civ. P. 23(b)(3). Predominance does not demand that the common issues be identical so long as there is an essential common factual link between all Class members and the defendant for which the law provides a remedy. *Yokoyama v. Midland Nat. Life Ins. Co.*, 594 F.3d 1087, 1093 (9th Cir. 2010). "There is no definitive test for determining whether common issues predominate, however, in general, predominance is met when there exists generalized evidence which proves or disproves an [issue or] element on a simultaneous, class-wide basis, since such proof obviates the need to examine each class members' individual position." *Galvan*, 2011 WL 5116585, at *8 (quoting *Withers v. eHarmony, Inc.*, CV 09-2266-GHK (RCx), Order Denying Mot. to Cert. Class,

VW FOIA, EPA 06/20/2017 2017-FFP_035352

Docket No. 13 (June 2, 2010)). See also *Dukes*, 131 S. Ct. at 2566 (the predominance inquiry is meant to "tes[t] whether proposed classes are sufficiently cohesive to warrant adjudication by representation." The main concern is "the balance between individual and common issues." *In re Wells Fargo Home Mortg. Overtime Pay Litig.*, 571 F.3d 953, 959 (9th Cir. 2009).

Common issues predominate in this case because the evidence necessary to establish Plaintiff's claims is common to all members of the Class (i.e. - they would all seek to prove that their VW Clean Diesel Vehicles were not "clean" and did not meet federal and state emission standards, despite representations by VW to the contrary). Indeed, VW has essentially admitted commonality exists by stating that it will implement a recall program to fix the defect it admits exists in its vehicles. See Vendler Dec., Exhibit "K."

The evidence to prove the classes' claims will be the same regardless of whether the class is 100 members or 500,000 and will include: (1) VW's admissions of wrongdoing; (2) VW's representations, marketing, and advertisements used to sell its vehicles; (3) VW's development, testing, and decisions to deceive the EPA and CARB as well as the general public concerning the existence of the Defeat Device to; and (4) the manner in which VW's fraudulent activities were ultimately discovered by the EPA and CARB. See, e.g., *Wolin*, 617 F.3d at 1173 (finding that all of the allegations regarding a common defect, the defendant's failure to reveal material facts in violation of consumer-protection laws, and the defendant's unjust enrichment "are susceptible to proof by generalized evidence.") Here, the case for commonality is even stronger for each of Plaintiff's causes of action since VW has admitted that it committed the wrong that is the lynchpin of all of the claims alleged in the Complaint.

1. Plaintiff's CLRA Claim.

Common issues predominate with respect to Plaintiff's CLRA claim. Causation for CLRA claims can be demonstrated as to an entire class by establishing that material misrepresentations or omissions have been made to the class. *Keegan*, *supra,*

VW FOIA, EPA 06/20/2017 2017-FFP_035353

284 F.R.D. at 530 (citing *Stearns v. Ticketmaster Corp.*, 655 F.3d 1013, 1022 (9th Cir. 2011)).

While numerous common issues exist with respect to Plaintiff's CLRA claim, by far the most important is whether VW represented its Clean Diesel vehicles as having properties or characteristics that it did not have. See *Parkinson, supra,* at 258 F.R.D. 593 and 596 (predominance with respect to CLRA claim was met where automaker accused of concealing flywheel defect) and *Chamberlan v. Ford Motor Co.*, 223 F.R.D. 524, 526-27 (N.D. Cal. 2004)). See also, *In re Steroid Hormone Product Cases*, 181 Cal. App. 4th 145, 157 (2010) (class action claim appropriate where defendant sold misbranded and illegal steroid product – "the question that must be answered in this case is whether a reasonable person would find it important when determining whether to purchase a product that it is unlawful to sell or possess that product. It requires no stretch to conclude that the proper answer is 'yes'"). Here, VW's products were just as illegal when sold as the supplements with the undisclosed steroids sold by GNC and a class action is likewise appropriate to redress the wrong VW has caused by representing to consumers that its "Clean Diesel Vehicles" were emissions compliant when they were not. Thus Plaintiff's CLRA claim satisfies the predominance requirement.[9]

2. Plaintiff's Fraud and Negligent Misrepresentation Claims.

Predominance is also satisfied for Plaintiff's nationwide fraud and negligent-representation claims. As with Plaintiff's CLRA claim, both have for their lynchpin the claim that VW concealed material facts concerning emissions compliance. (See Complaint at ¶¶ 27-35). Regardless of whether the misrepresentations were

[9] It is also indisputable that Plaintiff meets the 3 other factors for **mandatory** certification of his CLRA claim under *Hogya*, namely that: (1) it is impracticable to bring all members of the class before the court; (2) the claims or defenses of the representative plaintiffs are typical of the claims or defenses of the class; and (3) that the representative plaintiffs will fairly and adequately protect the interests of the class. As such, this Court must certify at least the CLRA subclass.

VW FOIA, EPA 06/20/2017 2017-FFP_035354

intentional or not, VW's misrepresentations were made with the intent to induce Plaintiff and the Class members into purchasing VW Clean Diesel Vehicles at a premium. And it is VW's scheme of asserting the underlying misrepresentations and "not the details of any individual's experience that forms the nucleus of the class claims." *Joint Equity Comm. of Investors of Real Estate Partners, Inc. v. Coldwell Banker Real Estate Corp.*, 281 F.R.D. 422, 430 (C.D. Cal. 2012) (quoting *Menagerie Prods*., 2009 WL 3770668, at *5); see also See *Yokoyama v. Midland Nat'l Life Ins. Co.*, 594 F.3d 1087 (9th Cir. 2009) (reversing denial of class certification where plaintiffs based their lawsuit on nondisclosures in standardized written forms) and *Rodman v. Safeway, Inc.*, 2014 WL 988992 *11 (N.D.Cal. 2014) (Class action plaintiffs can avoid the need to show each class member's individual reliance by resorting to California law's presumption of common reliance where the entire class saw the misrepresentations or was exposed to a pervasive long-term advertising campaign.) Predominance is thus satisfied for the fraud and negligent misrepresentation claims.

3. Plaintiff's Unfair Business Practices Claim.

Common issues predominate through Plaintiff's UCL claim, again because the same common proof used to establish a violation of the CLRA can be used for Plaintiff's UCL claim. *Keegan, supra,* 284 F.R.D. 533. Furthermore, "relief under the UCL is available without individualized proof of deception, reliance and injury." *Id.* As with Plaintiffs' CLRA claim, there is "a presumption, or at least an inference, of reliance" because Plaintiff and the proposed class can demonstrate that the alleged misrepresentations concerning emissions standards and compliance was material and uniform class wide. *Id*. at 533-34; *Parkinson v. Hyundai Motor Am.*, *supra* at 258 FRD 596-597 (defendant's alleged knowledge of a defect presents common issues for the CLRA and UCL claims because, if materiality is shown, reliance and causation may be presumed as to the entire class); See also *Keegan*, *supra,* 284 F.R.D. 533 (C.D. Cal. 2012) (distinguishing *Am. Honda Motor Co., Inc. v. Super. Ct.*, 199 Cal.

VW FOIA, EPA 06/20/2017 2017-FFP_035355

App. 4th 1367, 1377 (Cal. App. 2d Dist. 2011)).

4. The False Advertising Claim.

Common issues also predominate for Plaintiff's claim for violations of California's False Advertising Law. Plaintiff alleges that VW caused to be made or disseminated throughout California and the United States, through numerous advertising, and marketing mediums (i.e., TV, print, internet, billboard, etc.) statements that were untrue, misleading, and which VW knew to be untrue and misleading. By marketing its VW Clean Diesel Vehicles as low-emission, fuel-efficient cars, VW catapulted itself to becoming largest seller of diesel passenger vehicles in the United States. Plaintiff and Class Members were even convinced to pay more for their vehicles than they otherwise would have paid for similar modeled vehicles that did not purport to be "clean" and fuel efficient.

Had Plaintiff and Class Members known the truth, they would not have purchased/leased their vehicles and/or paid as much for them. See *In re Tobacco II Cases*, JCCP 4042, 2001 WL 34136870, at *3 (Cal. Super. Ct. Apr. 11, 2001) (finding that common issues predominated for all class claims brought under Cal. Bus. & Prof. Code §§ 17500, et seq. despite the fact that "a myriad of distinct issues exist as to each class member's exposure to the alleged deceptive marketing [and] reliance thereon" because the class "assert[ed] identically that Defendants, ... by way of deceptive advertising and marketing acts, misled the [] public" and "targeted the putative class uniformly in an alleged class-wide effort to seduce and induce people" to purchase their product).

5. The Warranty Claims.

The breach-of express and implied warranty claims raised by Plaintiff under the Song-Beverly Consumer Warranty Act, California's Commercial Code, and the Magnuson-Moss Warranty Act also satisfy the predominance standard. Here, Plaintiff alleges that in selling its vehicles, VW expressly and impliedly warranted that the VW Clean Diesel Vehicles met federal and state emissions standards, and that the VW

VW FOIA, EPA 06/20/2017 2017-FFP_035356

Clean Diesel Vehicles were in fact non-compliant with regard to federal and state emissions standards. As such, Plaintiff claims that VW breached its express and implied warranties. The main questions are therefore whether the VW Clean Diesel Vehicles' uniform non-compliance with regard to emissions standards, and VW's secret installation and use of the defeat device breached VW's express and implied warranties and whether that breach occurred on a class-wide basis. Consequently, Plaintiffs' express-warranty claims satisfy the predominance standard. (See e.g., *In re MyFord Touch Consumer Litig.*, 46 F. Supp. 3d 936, 983 (N.D. Cal. 2014) (evaluating applicability of both California's Song-Beverly Consumer Warranty and Commercial code claims as well as the Magnuson-Moss Warranty Act claims raised by a class of plaintiffs similar to those at issue here against an auto manufacturer).

6. Damages and/or Restitution can be Computed Uniformly.

Plaintiff's damage model was very well put by Representative Janice Schakowski at the September 8, 2015 congressional hearing – "VW's customers should be able to get their money back, all of it." See Vendler Dec., Exhibit "L." But even if that remedy is not granted, individual damage calculations can be calculated by a single formula based on the make, model and year of the Class Member's vehicle. There are a number of organizations that very closely track car values. Most well known is KBB.com, which publishes the "Kelly Blue Book." The loss in value of VW's vehicles (and any damages from loss in fuel economy) can be established by expert testimony. But even if this were not so, it is well established that the need to perform individual damage calculations "cannot defeat class certification." *Yokoyama*, 594 F.3d at 1094; See also *Blackie v. Barrack*, 524 F.2d 891, 901, 905 (9th Cir. 1975) (holding that differences in individual damage will not defeat class certification).

E. <u>The Class Action Method is Superior.</u>

"[T]he purpose of the superiority requirement is to assure that the class action is the most efficient and effective means of resolving the controversy." *Wolin v. Jaguar Land Rover N. Am.*, LLC, 617 F.3d 1168, 1175 (9th Cir. 2010). Superiority is

VW FOIA, EPA 06/20/2017 2017-FFP_035357

fulfilled "when 'no realistic alternative' to a class action 'exists.'" *Valentino v. Carter-Wallace, Inc.*, 97 F.3d 1227, 1234-35 (9th Cir. 1996)).

Each of the relevant Rule 23(b)(3) factors that guide the superiority inquiry is satisfied here. First, With respect to factors (A) and (C), the reimbursement amount of the premium paid for each VW Diesel Vehicle and the concomitant drop in value of these vehicles is too low, and the factual, legal, and financial burdens of litigating for a lump-sum payment are too high to motivate many Class members to litigate their claims on an individual basis. See *Hanlon v. Chrysler Corp.,* 150 F.3d 1011, 1023 (9th Cir. 1998). (where "the alternative methods of resolution are individual claims for a small amount of consequential damages .... litigation costs would dwarf potential recovery"); *Tait v. BSH Home Appliances Corp.*, 289 F.R.D. 466, 486 (C.D. Cal. 2012) (same).

Many Class Members will not bring individual lawsuits to obtain a lump-sum payment, especially given the difficult and complex issues about (1) how VW hid the implementation of the Defeat Devices from the EPA and CARB, (2) how the EPA and CARB's emission tests are performed, (3) the necessity to engage in overseas discovery (for the punitive damage aspect of the case), and (4) the logistical issues involved in obtaining expert and other technical evidence against a well-funded, global corporation like VW, which has retained experienced and savvy counsel to represent it. See *Keegan v. Am. Honda Motor Co., Inc.*, 284 F.R.D. 504, 549 (C.D. Cal. 2012) ("The funds required to marshal the type of evidence, including expert testimony, that will be necessary to pursue these claims against well-represented corporate defendants would discourage individual class members from filing suit when the expected return is so small.").

Consequently, class certification efficiently streamlines and conserves both individual and judicial resources. See *Hartless v. Clorox Co.,* 273 F.R.D. 630, 639 (S.D. Cal. 2011) ("multiple individual claims could overburden the judiciary"), aff'd in part, 473 F. App'x 716 (9th Cir. 2012).

VW FOIA, EPA 06/20/2017 2017-FFP_035358

Factor (B)—the extent and nature of any similar litigation—also favors certification of this action. Through Plaintiff's counsel's effort in filing the first MDL petition, numerous similar lawsuits filed nationwide will likely ultimately be consolidated. To date, more than 100 federal class-action lawsuits based on essentially the same facts and legal theories at issue here have been filed against VW.[10] Through the MDL process, Plaintiff has requested the MDL Panel to transfer those cases to this Court and to consolidate those actions with this litigation. Additionally, as this Court is aware, Plaintiff has requested a status conference in this case to discuss beginning the international discovery process overseas (given the lengthy nature of going through the Hague Convention's processes and procedures for taking evidence in Germany.

The final superiority factor regarding manageability emphasizes the issue of whether "the complexities of class action treatment outweigh the benefits of considering common issues in one trial ...." *McKenzie v. Fed. Exp. Corp.*, 275 F.R.D. 290, 302 (C.D. Cal. 2011). The question is not "whether this class action will create significant management problems," but rather "whether it will create relatively more management problems than any of the alternatives." *Klay v. Humana, Inc.*, 382 F.3d 1241, 1273 (11th Cir. 2004), abrogated in part on other grounds by *Bridge v. Phoenix Bond & Indem. Co.*, 553 U.S. 639 (2008). A manageability concern "will rarely, if ever, be in itself sufficient to prevent certification of a class." *Id.* at 1272. See also *In re Visa Check/MasterMoney Antitrust Litig.*, 280 F.3d 124, 140 (2d Cir. 2001) ("failure to certify an action under Rule 23(b)(3) on the sole ground that it would be unmanageable is disfavored and 'should be the exception rather than the rule."). Also,

[10] It is expected that VW will claim that it is premature to certify any class and/or that doing so would potentially interfere with the consolidation proceeding. Not so. Apart from the language of Rule 23 requiring certification to be conducted as soon as practicable, this Court's own local rule requires that it be done within 90 days. Moreover, for at least the California sub-classes, it makes total sense to have a California jurist evaluate those no matter in which court these cases eventually end up.

VW FOIA, EPA 06/20/2017 2017-FFP_035359

for Plaintiff's CLRA claim, manageability is not among the statutory factors to be considered. So, if Plaintiff meets the minimum requirements for certification of a class under the CLRA, there is no reason (from a manageability perspective, at least) not to certify the other claims as there will be a class action in any event.

But even if this were not true, Plaintiff does not predict any serious manageability difficulties in maintaining this class action, and certainly none that would justify forcing thousands of individuals to pursue individual actions alone. After all, by its recall, VW is essentially managing its own class.[11]

IV. MORRIS POLICH & PURDY LLP SHOULD BE APPOINTED CLASS COUNSEL

Pending consolidation, Morris Polich & Purdy LLP should be appointed class counsel and Mr. D'Angelo as the named class representative. So it is clear, Plaintiff is not seeking to be named class counsel to the exclusion of any other counsel later being named as such. In fact, Plaintiff welcomes the assistance of other plaintiff counsel post-consolidation. However, the class will not be prejudiced in the meantime by the appointment of MPP as class counsel. Through MPP, Plaintiff was not only among the first to file against VW, but he filed the first MDL petition. MPP has also moved expeditiously to file this motion and to generally move his case forward.

V. CONCLUSION

For the reasons specified above, Plaintiff's Motion for Class Certification should be granted.

[11] Any argument by VW that its recall announcement might obviate the need for a class action is ridiculous. First of all, the recall will not eliminate the harm suffered by the Classes. Fuel economy and performance will certainly drop post recall since the defeat devices were installed precisely to boost these characteristics. Second, the value of these vehicles has plummeted since VW's fraud came to light. Third, VW's recalling these cars does not take away from the fact that VW defrauded its customers in the first instance. Punitive damages have been alleged against VW for this fraud and VW's recall cannot eliminate those.

Subject: Morning Consult Energy, Presented by America's Natural Gas Alliance: GOP Sen. Ayotte Backs Clean Power Plan; U.S. Oil Imports Rising after Years of Decline

By Dmitry Filipoff

Today's Washington Brief

- Sen. Kelly Ayotte (R-N.H.) came out in support of the Clean Power Plan, putting her at odds with Senate Republican leadership. (The Huffington Post)
- The U.S. Chamber of Commerce and 14 other business groups filed suit against the EPA for its Clean Power Plan. (Washington Times)
- The White House released an overdue report that shows the Environmental Protection Agency has the most major federal rules, as well as the highest costs and benefits, over a 10-year period. (Washington Examiner)

Today's Business Brief

- U.S. oil imports are on the rise after years of decline, according to the Energy Information Administration. The slowdown in U.S. shale oil production has encouraged the purchase of oil from a more diverse range of producers. (The Wall Street Journal)
- Chinese company Yantai Xinchao Industry Co. will acquire oil properties in Texas for $1.3 billion. (Associated Press)
- The Interior Department's proposed stream protection rule could result in the loss of more than 281,000 jobs, according to a study commissioned by the National Mining Association. The study also forecasts that federal and state governments would lose $3.1 billion and $6.4 billion in annual tax revenue from a decline in coal production. (The Hill)

General

Congress and White House reach tentative budget deal
David M. Herszenhorn, The New York Times

After five years of bitter clashes, Republican congressional leaders and President Obama on Monday night appeared to settle their last budget fight by reaching a tentative deal that would modestly increase spending over the next two years, cut some social programs, and raise the federal borrowing limit. The accord, which must be approved by the House and the Senate, would avert a potentially cataclysmic default on the government's debt and dispenses with perhaps the most divisive issue in the capital just before Speaker John A. Boehner is expected to turn over his gavel to Representative Paul D. Ryan of Wisconsin.

GOP Sen. Kelly Ayotte Backs Obama's Climate Change Plan
Kate Sheppard, The Huffington Post

Sen. Kelly Ayotte (R-N.H.) came out in favor of the Obama administration's effort to cut carbon pollution by power plants on Sunday, bucking Senate leadership that has worked to derail the emissions plan. The Obama administration announced final regulations on emissions from both new and existing power plants in August.

White House report shows high cost of EPA rules
John Siciliano, Washington Examiner

The White House released an overdue report on the cost of regulations that shows that the Environmental Protection Agency dominates all other agencies in both benefits and costs, as well as the number of regulations. EPA is number one on costs, ranging from $37.6 billion to $45.4 billion from 2004 to 2014 in 2010 dollars.

Business groups join fight to combat Clean Power Plan
Valerie Richardson, Washington Times

The U.S. Chamber of Commerce and 14 other business groups filed a lawsuit against the Environmental Protection Agency Friday, the day the rule was published, and followed up Monday with a press call with the National Association of Manufacturers and National Federation of Independent Business. The business challenge parallels the lawsuit filed Friday by 24 states, represented primarily by attorneys general, who argue that the EPA has overstepped its authority by attempting a takeover of state power plants.

EPA: Clean Power Plan Extensions Not a 'Heavy Lift'
Andrew Childers and Patrick Ambrosio, Bloomberg News

The Environmental Protection Agency has intentionally set a very low bar for states seeking a two-year extension to submit plans to implement the Clean Power Plan, the agency's top air pollution official said. Janet McCabe, the EPA's acting assistant administrator for air and radiation, told the Environmental Council of States Oct. 21 that receiving the extension is deliberately "not intended to be a heavy lift."

U.S. Index Futures Are Little Changed Before Fed, Apple Earnings
Sofia Horta E Costa, Bloomberg News

U.S. stock-index futures were little changed before the Federal Reserve begins a two-day monetary policy meeting and companies including Apple Inc. report earnings. Standard & Poor's 500 Index E-mini contracts expiring in December fell less than 0.1 percent to 2,060.5 at 9:42 a.m. in London, paring a drop of as much as 0.3 percent.

Oil & Natural Gas

After Years of Decline, U.S. Oil Imports Rise
Nicole Friedman, The Wall Street Journal

U.S. crude imports declined 20% between 2010 and 2014 amid the domestic energy boom but have recently started to rise again. Total crude-oil imports rose for three straight months between April and July, according to the most recently available data from the Energy Information Administration.

Chinese investment company to buy Texas oil fields for $1.3B
The Associated Press

A Chinese investment holding company said it has signed a letter of intent to purchase oil fields in Texas for 8.3 billion yuan ($1.3 billion) through a limited liability partnership. In a disclosure to the Shanghai Stock Exchange, Yantai Xinchao Industry Co. Ltd. said the oil fields in Howard and Borden counties would be bought from Tall City Exploration and Plymouth Petroleum, two Nevada-based companies.

Utilities & Infrastructure

Energy Storage Industry Gaining Momentum
Diane Cardwell, The New York Times

Instead of using “the go-it-alone model” of developing, building and distributing batteries, as he said he did at A123 while chief executive, Vionx is taking a leaner approach. It focuses on engineering, marketing, sales and service, and leaving the rest to well-established partners like United Technologies, Siemens and 3M.

Wind Power Now Cheaper Than Natural Gas for Xcel, CEO Says
Alex Nussbaum and Chris Martin, Bloomberg News

Xcel Energy Inc., the biggest U.S. provider of wind power, expects long-term contracts for the technology to beat the cost of natural gas, another sign of the rapid transformation of the power market. Xcel, the Minneapolis-based utility that serves eight states, is receiving bids for 20-year power-purchase agreements at about $25 a megawatt-hour for wind energy, Chief Executive Officer Ben Fowke said in an interview Friday at Bloomberg News headquarters in New York.

Truckers Again Becoming More Competitive With Rail
Laura Stevens, The Wall Street Journal

Fuel prices are low enough that truckers are again becoming more competitive with rail, executives at Union Pacific Corp. said Thursday. For years, railroads like Union Pacific have been developing their intermodal businesses of moving containers and trailers, allowing them to compete directly with truckers on their home turf.

Renewables

Texas hits new wind power milestone
Jordan Blum, The Houston Chronicle

The Texas electric grid hit a new record for wind power use early Thursday, as the state continues dominating the rest of the nation in wind farm growth. At 12:30 am Thursday, the main Texas grid operator reported that nearly 37 percent of demand was met with wind power.

New York's Green Bank Invests $49M in Solar, Wind and Efficiency
Katherine Tweed, Greentech Media

For the past two years, New York has been building a portfolio that could eventually lure hundreds of millions of private dollars to clean-energy projects through its Green Bank. It began with $165 million in financing that would be matched by private capital, with the goal of scaling up to $1 billion.

Despite Risks, Cuomo Bets on Solar Power to Lift Buffalo
Susanne Craig, The New York Times

On the often cloudy shores of the Buffalo River, where a steel factory once thrived, lies the rising framework of one of New York's most ambitious economic endeavors ever: a giant solar panel factory that the state says will be the largest of its kind in the Western Hemisphere. Gov. Andrew M. Cuomo has committed up to $750 million to the project, the biggest economic development effort he has undertaken in his five years as governor.

Farms flexing solar power
Nicholas Bergin, Lincoln Journal Star

He is one of a growing number of Nebraska farmers, homeowners and businesspeople who have sharpened their pencils, done some math and found small-scale solar arrays will save them money while reducing their carbon footprint. Solar panels have been installed on a growing number of farms and in fields, powering water pumps for livestock and center pivot irrigation systems for row crops, with the benefits of lower installation costs, improved performance, grants and tax breaks.

Coal

Industry study: Mining rule would kill 281k jobs
Timothy Cama, The Hill

The Obama administration's proposal to better protect streams from coal mining would kill 281,000 jobs, a new study concluded. The research, commissioned by the National Mining Association (NMA), said the stream protection rule threatens 40,000 to 78,000 coal mining jobs, on top of the 40,000 already lost since 2011.

Whiplash: Shift in federal coal policies stokes fear in rural areas
Joby Warrick, The Washington Post

As the country's electricity providers prepare to comply with new federal regulations that restrict the use of coal, dozens of small utilities across rural America say they are bracing for soaring costs and possible plant closures. Some, such as the Tampa-based Seminole Electric Cooperative, went deeply into debt to build the coal-fired power plants U.S. officials demanded years ago, and now they are stuck with facilities that can't meet the new standards and can't be easily upgraded or replaced.

Coal mine expansion stalls in lawsuit citing climate change
Matthew Brown, The Associated Press

The U.S. Interior Department should not have approved the expansion of a southeastern Montana coal mine without taking a closer look at its effect on the environment, a federal judge said about a lawsuit arguing the government ignored coal's contributions to climate change. Environmental groups sued the Interior Department after it approved an expansion of the Spring Creek Coal mine in 2012.

Nuclear

Start-Ups Take On Challenge of Nuclear Fusion
Dino Grandoni, The New York Times

A group of start-ups is promising a new and virtually unlimited source of power, one that produces none of the gases scientists say contribute to global warming. The only problem? A way to harness the energy source, nuclear fusion — the reaction that gives birth to sunlight — still needs to be invented.

Edison reaches $400-million settlement with nuclear insurer
Ivan Penn, Los Angeles Times

Southern California Edison has reached a $400-million settlement with its insurer over the shuttered San Onofre nuclear plant that the utility says will help cut customers' costs. Edison said 95% of the money from Nuclear Electric Insurance Limited, or NEIL, "will benefit customers," though it will not come in the form of a refund.

Climate

EU failed to heed emissions warnings in 2013
Jim Brunsden and Christian Oliver, Financial Times

The EU's top environmental official alerted his colleagues that motor manufacturers were gaming European emissions tests more than two years before US authorities uncovered widespread cheating by Volkswagen, according to internal European Commission documents obtained by the Financial Times. Despite the warning sounded by Janez Potocnik, the then EU environment commissioner, Brussels did not take swift action to crack down on the practice but instead left in place an earlier plan that allowed the emissions loopholes exploited by Volkswagen to remain through to 2017.

How Could Volkswagen's Top Engineers Not Have Known?
Dune Lawrence et al., Bloomberg News

An environmental group, the International Council on Clean Transportation, had asked the school's Center for Alternative Fuels, Engines and Emissions to test the tailpipes of diesel cars in the U.S., such as those sold by Volkswagen and BMW. Studies suggested that automakers' diesel cars polluted more on the road than in the lab, and curiously, more in Europe than in the U.S.

A Message from America's Natural Gas Alliance:

We're producing more natural gas, more cleanly than ever before. The natural gas industry has spent years developing innovative technologies that are helping America realize its environmental, economic and energy security goals. Since 2005, natural gas production has increased by more than one third, while methane emissions dropped by 38%. America's Natural Gas. Think About It.

Opinions, Editorials & Perspectives

Did $8 Billion in Government Smart-Grid Investments Make a Difference?
Charlie Chen, Greentech Media

An analysis of the electricity outage data from the Department of Energy shows that outages are on the rise. In fact, the average number of outages doubles every five years, largely because of extreme weather events. Events such as the Northeast blackout (2003), Pacific Northwest storm (2006), Hurricane Irene (2011), Hurricane Sandy (2012), and the East Coast derecho (2012) caused major outages impacting large swaths of the country.

Taming Wind Power With Better Forecasts

Sue Ellen Haupt and William P. Mahoney, IEEE

It's because since the 2000s, scientists have been dramatically improving their ability to forecast the amount of power that utilities will be able to draw from the wind. And these forecasts are getting better all the time, allowing utilities to depend more and more on their wind resources and less on fossil fuels or nuclear power.

Why We Support the ITC Extension and Why You Should Too
Yuri Horwitz, Greentech Media

In the next 12 months, each of us will either take action to extend the federal Investment Tax Credit (ITC), set to drop by 66 percent, or we will not. The planned reduction in the ITC is projected to cut solar installations by half, immediately setting the solar industry back five years and leading to the lowest annual amount of solar installed since 2012.

A Message from America's Natural Gas Alliance:

Abundant, domestic natural gas delivers clear environmental, economic and energy security benefits. Since 2005, natural gas production has increased by more than one third, while methane emissions dropped by 38%. This impressive record has been accomplished through existing regulations and industry innovation. This type of collaborative approach, rather than new rules, will bring greater reductions more quickly - a goal we all share. America's Natural Gas. Think About It.

Subject: Morning Consult Energy, Presented by America's Natural Gas Alliance: GOP Sen. Ayotte Backs Clean Power Plan; U.S. Oil Imports Rising after Years of Decline

By Dmitry Filipoff

Today's Washington Brief

- Sen. Kelly Ayotte (R-N.H.) came out in support of the Clean Power Plan, putting her at odds with Senate Republican leadership. (The Huffington Post)

- The U.S. Chamber of Commerce and 14 other business groups filed suit against the EPA for its Clean Power Plan. (Washington Times)

- The White House released an overdue report that shows the Environmental Protection Agency has the most major federal rules, as well as the highest costs and benefits, over a 10-year period. (Washington Examiner)

Today's Business Brief

- U.S. oil imports are on the rise after years of decline, according to the Energy Information Administration. The slowdown in U.S. shale oil production has encouraged the purchase of oil from a more diverse range of producers. (The Wall Street Journal)

- Chinese company Yantai Xinchao Industry Co. will acquire oil properties in Texas for $1.3 billion. (Associated Press)

- The Interior Department's proposed stream protection rule could result in the loss of more than 281,000 jobs, according to a study commissioned by the National Mining Association. The study also forecasts that federal and state governments would lose $3.1 billion and $6.4 billion in annual tax revenue from a decline in coal production. (The Hill)

Americans Have Never Been So Sure About Climate Change—Even Republicans
Bloomberg News

Mark Your Calendars (All Times Eastern)

Tuesday
Senate Energy & Natural Resources Committee holds hearing on proposed Stream Protection Rule @ 10 a.m.
Bipartisan Policy Center hosts talk on nuclear waste @ 10 a.m.
American Council on Renewable Energy hosts webinar on renewable energy for Latin America
Brookings Institution holds talk on lessons from energy transitions in Germany, Japan @ 2 p.m.
Bipartisan Congressional Battery Energy Storage Caucus debuts with capital briefing @ 3 p.m.

Wednesday
House Energy and Commerce Committee holds hearing on radioactive waste disposal @ 10:15 a.m.

Thursday
Environmental Law Institute conference on green infrastructure @ 12:30 p.m.
Clean Energy States Alliance holds discussion on benefits of solar storage @ 2 p.m.
Bipartisan Policy Center talk on sustainability and food supply @ 2 p.m.

Friday
Cato Institute holds conference on the 2015 United Nations Climate Change Conference @ 10:30 a.m.

General

Congress and White House reach tentative budget deal
David M. Herszenhorn, The New York Times

After five years of bitter clashes, Republican congressional leaders and President Obama on Monday night appeared to settle their last budget fight by reaching a tentative deal that would modestly increase spending over the next two years, cut some social programs, and raise the federal borrowing limit. The accord, which must be approved by the House and the Senate, would avert a potentially cataclysmic default on the government's debt and dispenses with perhaps the most divisive issue in the capital just before Speaker John A. Boehner is expected to turn over his gavel to Representative Paul D. Ryan of Wisconsin.

GOP Sen. Kelly Ayotte Backs Obama's Climate Change Plan
Kate Sheppard, The Huffington Post

Sen. Kelly Ayotte (R-N.H.) came out in favor of the Obama administration's effort to cut carbon pollution by power plants on Sunday, bucking Senate leadership that has worked to derail the emissions plan. The Obama administration announced final regulations on emissions from both new and existing power plants in August.

White House report shows high cost of EPA rules
John Siciliano, Washington Examiner

The White House released an overdue report on the cost of regulations that shows that the Environmental Protection Agency dominates all other agencies in both benefits and costs, as well as the number of regulations. EPA is number one on costs, ranging from $37.6 billion to $45.4 billion from 2004 to 2014 in 2010 dollars.

Business groups join fight to combat Clean Power Plan
Valerie Richardson, Washington Times

The U.S. Chamber of Commerce and 14 other business groups filed a lawsuit against the Environmental Protection Agency Friday, the day the rule was published, and followed up Monday with a press call with the National Association of Manufacturers and National Federation of Independent Business. The business challenge parallels the lawsuit filed Friday by 24 states, represented primarily by attorneys general, who argue that the EPA has overstepped its authority by attempting a takeover of state power plants.

EPA: Clean Power Plan Extensions Not a 'Heavy Lift'
Andrew Childers and Patrick Ambrosio, Bloomberg News

The Environmental Protection Agency has intentionally set a very low bar for states seeking a two-year extension to submit plans to implement the Clean Power Plan, the agency's top air pollution official said. Janet McCabe, the EPA's acting assistant administrator for air and radiation, told the Environmental Council of States Oct. 21 that receiving the extension is deliberately "not intended to be a heavy lift."

U.S. Index Futures Are Little Changed Before Fed, Apple Earnings
Sofia Horta E Costa, Bloomberg News

U.S. stock-index futures were little changed before the Federal Reserve begins a two-day monetary policy meeting and companies including Apple Inc. report earnings. Standard & Poor's 500 Index E-mini contracts expiring in December fell less than 0.1 percent to 2,060.5 at 9:42 a.m. in London, paring a drop of as much as 0.3 percent.

Oil & Natural Gas

Evan,

I took at first cut at what can be responsive and what I think might be considered privileged as part of the ongoing investigation. I transferred it to excel so I could add a comment column. This does include everything from Becky's email late yesterday. We can discuss and then if we are in agreement, I can share this with the FOIA team for the 3 pm meeting. Byron would also like to make sure the record requests that are entitled to privilege are treated the same as they were for the Hyundai/Kia work.

To: Fernandez, Antonio <fernandez.antonio@epa.gov>
Subject: Tier 3 phase in questions

Hi Tony,

I have a few questions in 3 general Tier 3 areas.

Interim/Final Tier 3

My first question is regarding 'final' Tier 3 vehicle requirements. In order for a vehicle to be 'final' or 'not Interim', does it have to meet all the requirements of Part 1066 testing procedures? I understand that 86.101 (d) must be met starting in 22MY, but can a vehicle be considered to have 'final' status prior to this by meeting the other Tier 3 requirements? Or, for example, a 19MY vehicle that meets all the other standards of Tier 3, but is not yet tested on fully 1066 compliant test cells considered a Tier 3? As we discussed "final" Tier 3 designation does not need to meet all of the 1066 requirements however at a minimum it will need to use 1066 PM requirements and the new NMOG calculation for E10. Chris Laroo can assist if further information is needed. See http://www.ecfr.gov/cgi-bin/text-idx?SID=7bc71fb487c9d818c7331cdb8c18e753&mc=true&node=se40.19.86_1101&rgn=div8

PM Phase-in

From 86.1811-17 (b)(7)

(iii) Vehicles meeting the Tier 3 PM standards must meet those standards over the useful life as specified in §86.1805. Note that Interim Tier 3 vehicles may have different useful life values for PM emission standards than for other emission standards. This is correct. The new PM standards also require 150k UL for the PM aspect while the other emissions could be 120k during the phase-in depending on what bin was used. My recommendation is to stay with the program goal of getting to a 50 state vehicle that meets the 150k for California and remains at 150k for Federal. This allows one set of tests on one fuel with the same aged parts to fulfill the requirements of both programs.

Can an Interim Tier 3 vehicle be used to satisfy the PM phase-in percentage? Can you tell me which 86.1805 section I should look in? Is the default 86.1805-17? For Tier 3 PM useful life can be 10/120k for vehicles less than 6000#, but must use 85% of the applicable Tier 3 standard? (I understand that these 10/120k vehicles are not LEVIII compliant)

→ An Interim Tier 3 vehicle is one that meet some but not all of the Tier 3 requirements. If it meets the Tier 3 PM standard, it counts toward the PM phase-in percentage. If it doesn't meet the Tier 3 PM standard, then it doesn't count toward meeting the Tier 3 PM percentage. That should all be self-evident;

→ The provisions of 86.1805-17 correspond to the Tier 3 standards in 86.1811-17. If this is a MY 2016 vehicle meeting Tier 3 early, then the section numbering by MY doesn't work so neatly, but nothing else makes sense.

→ The 85% multiplier applies only to the NMOG+NOx fleet-average standard over the FTP; there is no other consequence of selecting the shorter UL. Note that this UL arrangement applies only for LDV and LDT1 (not all vehicles below 6000 lbs GVWR).

Cert carryover in 22MY

Must I redo cert testing in 22MY to demonstrate compliance to 86.101(d) or can I carryover packages certified prior (assuming they have used E10 by 20MY)?

That is my interpretation of

86.101 (b)

(3) For model years 2022 and later, manufacturers must use the test procedures specified in paragraph (d) of this section. Manufacturers may continue to use data based on the test procedures specified in paragraph (c) of this section for an engine family in 2022 and later model years, as long as the engine family is eligible for certification with carryover emission data.

→Carryover based on pre-1065 procedures is ok, as described in 86.101(b)(3).

Thanks very much! Your help is much appreciated.

Carbon rule wars continue: Senators push to block, greens pledge support

By Kevin Rogers

The battle over the Environmental Protection Agency's final Clean Power Plan continued to rage Tuesday, as senators unveiled their resolutions to undo the regulations, and a coalition of environmental groups pledged their legal support to defend the power plant carbon rules.

Senate Majority Leader Mitch McConnell, R-Ky., and his allies unveiled a pair of Congressional Review Act resolutions aimed at blocking the rules for new and existing

power plants, each drawing support from 49 senators.

Sens. Joe Manchin, D-W.Va., and Heidi Heitkamp, D-N.D., who co-sponsored the resolutions against the new and existing rules, were the only Democrats who signed onto the resolutions.

Seven Republicans, including Sens. Kelly Ayotte, R-N.H., Susan Collins, R-Maine, Cory Gardner, R-Colo., Dean Heller, R-Nev., Richard Burr, R-N.C., Mark Kirk, R-Ill., and Rob Portman, R-Ohio, were not party to either resolution.

Ayotte announced her support for the Clean Power Plan on Sunday, becoming the first Republican senator to do so. Representatives for the others did not return requests for comment on the resolutions.

The rules, which seek by 2030 to cut power plant carbon emissions by 32 percent from 2005 levels, have drawn lawsuits from 26 states and dozens of industry groups.

Senators backing the resolutions took the Senate floor Tuesday afternoon to criticize the rules. Sen. Shelley Moore Capito, R-W.Va., the lead sponsor for the existing plants resolution, said the regulations were aimed squarely at coal country.

"This is not a natural disaster. This is not a physical crisis. This is not an uncontrollable event, but a carefully crafted, precise and very mediated assault on a certain part of the country," Capito said. "Policies that help some states and really hurt others."

McConnell painted the rules as an executive overreach from President Barack Obama to make up for a failed attempt at cap-and-trade legislation in 2010 and was driven out of global ambition to act on climate change.

"There's a war on coal in America, and the leader is the president of the United States," McConnell said. "Eastern Kentucky looks like the Dust Bowl in the '30s. No jobs. No opportunities. No future. Not as a result of anything we passed, as the people's elected representatives, but by this sort of arrogant, single-handed, messianic goal to deal with worldwide climate."

The resolutions would require 60 votes in the Senate to pass, and an additional 7 votes to override a likely veto from Obama. Still, McConnell and his allies said the votes could put the Senate on the record.

Earlier in the day, Senate Minority Leader Sen. Harry Reid, D-Nev., said that Republicans were participating in "legislative malpractice" by not working toward their own climate legislation.

"We have a climate change problem that's hurting everybody, with rare exception," Reid said. "It's not even something Republicans still allow us to discuss."

The Sierra Club knocked the resolutions as an empty gesture that couldn't overcome a veto.

"This polluter-backed assault on the Clean Power Plan is another futile political ploy by the coal industry and their allies in Congress to derail common sense standards to protect our most vulnerable communities against carbon pollution," legislative director Melinda Pierce said in a statement.

The Sierra Club also offered legal reinforcement for EPA as one of nine public health and environmental groups who pledged to stand behind the agency as legal challenges move forward. The groups, led by the Environmental Defense Fund, filed a motion to intervene on EPA's behalf in the U.S. Court of Appeals for the District of Columbia Circuit.

"The Organizations are committed to protecting their members and others from the impacts of dangerous air pollution from existing power plants, including climate change and other harms to public health and welfare," the groups wrote.

Upcoming Events

The House's big day: Budget deal vote, GOP nominating Ryan

By Alan Fram

WASHINGTON (AP) — The House is poised to vote on a bipartisan pact charting a two-year budget truce and Republicans are set to nominate Rep. Paul Ryan as the chamber's new speaker, milestones GOP leaders hope will transform their party's recent chaos into calm in time for next year's presidential and congressional campaigns.

Democratic and Republican leaders in the House and Senate were urging lawmakers to back the agreement, which would resolve fights over defense and domestic spending and federal borrowing until early 2017. Expectations were for House passage Wednesday and final Senate approval next week, even as hard-right conservatives and farm-state lawmakers arrayed against the deal.

"That's good news for everybody. It's a step forward," President Barack Obama said of the deal Tuesday in Chicago. "And I hope both parties come together to pass this agreement without delay."

Among those declaring victory was departing Speaker John Boehner, R-Ohio, who was pivotal in crafting what amounts to a valedictory legislative prize for his supporters and a whack at his conservative House nemeses. The quarter-century House veteran serves his final day in Congress on Friday, driven into abrupt retirement by rebellious GOP hardliners who scorned his penchant for compromise with Obama and Democrats.

House bill revives Ex-Im Bank over conservative opposition

By Andrew Taylor

WASHINGTON (AP) — A strong coalition of establishment-backed Republicans and House Democrats voted overwhelmingly Tuesday to revive the Export-Import Bank, dealing a defeat to tea party conservatives and Speaker-to-be Paul Ryan.

The House approved the measure 313-118 as 127 Republicans joined with virtually every Democrat to support the bank, whose charter expired June 30. Since then, the bank has been unable to approve new applications to fulfill its mission of helping overseas buyers get financing to purchase U.S. exports like airplanes and heavy equipment. Supporters say the bank helps sustain tens of thousands of manufacturing jobs.

The legislation's fate is uncertain in the Senate.

Proponents of the bank forced a House vote through a rarely used procedure known as a discharge petition. They pushed a vote over the opposition of top House GOP leaders such as Majority Leader Kevin McCarthy of California, Whip Steve Scalise of Louisiana and Financial Services Committee Chairman Jeb Hensarling of Texas.

Statoil posts Q3 loss, feels sting of low oil price

By The Associated Press

STOCKHOLM (AP) — Norwegian oil and gas company Statoil posted a loss in the third quarter despite attempts to slash costs amid declining oil prices.

The state-controlled company posted a net loss Wednesday of 2.8 billion kroner ($330 million) in the July-September period, compared with a loss of 4.7 billion kronor in the same quarter last year.

Statoil cited "impairment charges and provisions," but it was also hit by declining revenue, which fell 24 percent to 112 billion kroner.

Low oil prices have put pressure on Statoil's high-cost offshore operations in the North Sea and Barents Sea.

German transport minister meets US officials on VW probe

By Michael Biesecker

WASHINGTON (AP) — Germany's top transportation official is pledging to cooperate closely with his American counterparts as the countries investigate Volkswagen's emissions-rigging scandal.

Transport Minister Alexander Dobrindt met in Washington this week with U.S. Transportation Secretary Anthony Foxx and Environmental Protection Agency Administrator Gina McCarthy. Dobrindt said his government will share information gleaned during its review of how the German automaker installed software designed to hide dirty emissions from its "Clean Diesel" cars sold since 2009 during U.S. compliance tests.

Both nations are conducting criminal investigations into VW's trickery, which the company first admitted to U.S. regulators last month. German police and prosecutors raided the company's global headquarters earlier this month seeking material to help clarify who knew about the cheating.

Dobrindt on Tuesday said he had scheduled further discussions with the U.S. officials and that the close partnership between the countries must be preserved.

Defense continues to contend ex-coal CEO focused on safety

By The Associated Press

CHARLESTON, W.Va. (AP) — With a key government witness on the stand, a former coal boss' defense team continued to contend his company prioritized safety and disciplined people when they made mistakes.

In Charleston federal court Tuesday, ex-Massey Energy CEO Don Blankenship's attorneys continued questioning former Massey subsidiary president Christopher Blanchard. Blanchard has testified since Thursday under an immunity agreement with the government.

Blankenship is charged with conspiring to break mine safety laws and lying to financial regulators about safety at Upper Big Branch, which exploded in 2010, killing 29 men. Blanchard's subsidiary oversaw the mine.

Blanchard continued to tell defense attorney William Taylor that he did not conspire with

Blankenship to break safety laws

Taylor discussed dozens of citations, memos and other documents to say Massey was concerned about safety under Blankenship's watch.

A message from America's Natural Gas Alliance

Clean is Powerful. Natural gas helps Georgia Power's plant generate electricity with 50% fewer emissions. Think about it.

LA Aqueduct flows after dam built for drought is dismantled

By Brian Melley

OLANCHA, Calif. (AP) — Water in the aqueduct that helped fuel Los Angeles' growth was flowing toward the city Wednesday for the first time in six months after workers removed an earthen and concrete dam that had diverted runoff to the parched Owens Valley.

With little mountain runoff due to a historic drought, water managers made the unprecedented decision to try to meet legal obligations to keep the Owens River flowing, control dust from a dry lake bed and irrigate pastures where cattle graze instead of sending water to the city.

For those in the Owens Valley, who have a history of conflict with the metropolis hundreds of miles to the south, the plugged-up aqueduct brought relief to some and misery to others.

Greek company pleads guilty to hiding ship's pollution

By The Associated Press

CORPUS CHRISTI, Texas (AP) — A ship management company based in Greece has agreed to pay $1 million in penalties after concealing that a ship it owned had dumped pollution into waters off the Texas Gulf Coast.

Chandris (Hellas) Inc. pleaded guilty on Tuesday in Corpus Christi federal court to violations of the Act to Prevent Pollution from Ships.

According to court records, the chief engineer of the M/V Sestrea — an 81,502 ton cargo ship Chandris operated — failed to document that the ship had dumped directly into the sea oily waste that should have been disposed through a separator aboard the vessel or burned in the ship's incinerator.

The ship had made stops in multiple ports in Texas, including Corpus Christi in January.

Chandris was also sentenced to three years of probation.

Green self-driving cars take center stage at Tokyo auto show

By Yuri Kageyama

TOKYO (AP) — Visions of cars that drive themselves without emitting a bit of pollution while entertaining passengers with online movies and social media are what's taking center stage at the Tokyo Motor Show.

Japan, home to the world's top-selling automaker, has a younger generation disinterested in owning or driving cars. The show is about wooing them back. It's also about pushing an

ambitious government-backed plan that paints Japan as a leader in automated driving technology.

Reporters got a preview look at the exhibition Wednesday, ahead of its opening to the public Oct. 30.

Nissan Motor Co. showed a concept vehicle loaded with laser scanners, a 360 degree camera setup, a radar and computer chips so the car can "think" to deliver autonomous driving. The Japanese automaker called it IDS, which stands for "intelligent driving system."

Carbon rule wars continue: Senators push to block, greens pledge support

By Kevin Rogers

The battle over the Environmental Protection Agency's final Clean Power Plan continued to rage Tuesday, as senators unveiled their resolutions to undo the regulations, and a coalition of environmental groups pledged their legal support to defend the power plant carbon rules.

Senate Majority Leader Mitch McConnell, R-Ky., and his allies unveiled a pair of Congressional Review Act resolutions aimed at blocking the rules for new and existing

power plants, each drawing support from 49 senators.

Sens. Joe Manchin, D-W.Va., and Heidi Heitkamp, D-N.D., who co-sponsored the resolutions against the new and existing rules, were the only Democrats who signed onto the resolutions.

Seven Republicans, including Sens. Kelly Ayotte, R-N.H., Susan Collins, R-Maine, Cory Gardner, R-Colo., Dean Heller, R-Nev., Richard Burr, R-N.C., Mark Kirk, R-Ill., and Rob Portman, R-Ohio, were not party to either resolution.

Ayotte announced her support for the Clean Power Plan on Sunday, becoming the first Republican senator to do so. Representatives for the others did not return requests for comment on the resolutions.

The rules, which seek by 2030 to cut power plant carbon emissions by 32 percent from 2005 levels, have drawn lawsuits from 26 states and dozens of industry groups.

Senators backing the resolutions took the Senate floor Tuesday afternoon to criticize the rules. Sen. Shelley Moore Capito, R-W.Va., the lead sponsor for the existing plants resolution, said the regulations were aimed squarely at coal country.

"This is not a natural disaster. This is not a physical crisis. This is not an uncontrollable event, but a carefully crafted, precise and very mediated assault on a certain part of the country," Capito said. "Policies that help some states and really hurt others."

McConnell painted the rules as an executive overreach from President Barack Obama to make up for a failed attempt at cap-and-trade legislation in 2010 and was driven out of global ambition to act on climate change.

"There's a war on coal in America, and the leader is the president of the United States," McConnell said. "Eastern Kentucky looks like the Dust Bowl in the '30s. No jobs. No opportunities. No future. Not as a result of anything we passed, as the people's elected representatives, but by this sort of arrogant, single-handed, messianic goal to deal with worldwide climate."

The resolutions would require 60 votes in the Senate to pass, and an additional 7 votes to override a likely veto from Obama. Still, McConnell and his allies said the votes could put the Senate on the record.

Earlier in the day, Senate Minority Leader Sen. Harry Reid, D-Nev., said that Republicans were participating in "legislative malpractice" by not working toward their own climate legislation.

"We have a climate change problem that's hurting everybody, with rare exception," Reid said. "It's not even something Republicans still allow us to discuss."

The Sierra Club knocked the resolutions as an empty gesture that couldn't overcome a veto.

"This polluter-backed assault on the Clean Power Plan is another futile political ploy by the coal industry and their allies in Congress to derail common sense standards to protect our most vulnerable communities against carbon pollution," legislative director Melinda Pierce said in a statement.

The Sierra Club also offered legal reinforcement for EPA as one of nine public health and environmental groups who pledged to stand behind the agency as legal challenges move forward. The groups, led by the Environmental Defense Fund, filed a motion to intervene on EPA's behalf in the U.S. Court of Appeals for the District of Columbia Circuit.

"The Organizations are committed to protecting their members and others from the impacts of dangerous air pollution from existing power plants, including climate change and other harms to public health and welfare," the groups wrote.

Carbon rule wars continue: Senators push to block, greens pledge support

By Kevin Rogers

The battle over the Environmental Protection Agency's final Clean Power Plan continued to rage Tuesday, as senators unveiled their resolutions to undo the regulations, and a coalition of environmental groups pledged their legal support to defend the power plant carbon rules.

Senate Majority Leader Mitch McConnell, R-Ky., and his allies unveiled a pair of Congressional Review Act resolutions aimed at blocking the rules for new and existing

power plants, each drawing support from 49 senators.

Sens. Joe Manchin, D-W.Va., and Heidi Heitkamp, D-N.D., who co-sponsored the resolutions against the new and existing rules, were the only Democrats who signed onto the resolutions.

Seven Republicans, including Sens. Kelly Ayotte, R-N.H., Susan Collins, R-Maine, Cory Gardner, R-Colo., Dean Heller, R-Nev., Richard Burr, R-N.C., Mark Kirk, R-Ill., and Rob Portman, R-Ohio, were not party to either resolution.

Ayotte announced her support for the Clean Power Plan on Sunday, becoming the first Republican senator to do so. Representatives for the others did not return requests for comment on the resolutions.

The rules, which seek by 2030 to cut power plant carbon emissions by 32 percent from 2005 levels, have drawn lawsuits from 26 states and dozens of industry groups.

Senators backing the resolutions took the Senate floor Tuesday afternoon to criticize the rules. Sen. Shelley Moore Capito, R-W.Va., the lead sponsor for the existing plants resolution, said the regulations were aimed squarely at coal country.

"This is not a natural disaster. This is not a physical crisis. This is not an uncontrollable event, but a carefully crafted, precise and very mediated assault on a certain part of the country," Capito said. "Policies that help some states and really hurt others."

McConnell painted the rules as an executive overreach from President Barack Obama to make up for a failed attempt at cap-and-trade legislation in 2010 and was driven out of global ambition to act on climate change.

"There's a war on coal in America, and the leader is the president of the United States," McConnell said. "Eastern Kentucky looks like the Dust Bowl in the '30s. No jobs. No opportunities. No future. Not as a result of anything we passed, as the people's elected representatives, but by this sort of arrogant, single-handed, messianic goal to deal with worldwide climate."

The resolutions would require 60 votes in the Senate to pass, and an additional 7 votes to override a likely veto from Obama. Still, McConnell and his allies said the votes could put the Senate on the record.

Earlier in the day, Senate Minority Leader Sen. Harry Reid, D-Nev., said that Republicans were participating in "legislative malpractice" by not working toward their own climate legislation.

"We have a climate change problem that's hurting everybody, with rare exception," Reid said. "It's not even something Republicans still allow us to discuss."

The Sierra Club knocked the resolutions as an empty gesture that couldn't overcome a veto.

"This polluter-backed assault on the Clean Power Plan is another futile political ploy by the coal industry and their allies in Congress to derail common sense standards to protect our most vulnerable communities against carbon pollution," legislative director Melinda Pierce said in a statement.

The Sierra Club also offered legal reinforcement for EPA as one of nine public health and environmental groups who pledged to stand behind the agency as legal challenges move forward. The groups, led by the Environmental Defense Fund, filed a motion to intervene on EPA's behalf in the U.S. Court of Appeals for the District of Columbia Circuit.

"The Organizations are committed to protecting their members and others from the impacts of dangerous air pollution from existing power plants, including climate change and other harms to public health and welfare," the groups wrote.

Upcoming Events

The House's big day: Budget deal vote, GOP nominating Ryan

By Alan Fram

WASHINGTON (AP) — The House is poised to vote on a bipartisan pact charting a two-year budget truce and Republicans are set to nominate Rep. Paul Ryan as the chamber's new speaker, milestones GOP leaders hope will transform their party's recent chaos into calm in time for next year's presidential and congressional campaigns.

Democratic and Republican leaders in the House and Senate were urging lawmakers to back the agreement, which would resolve fights over defense and domestic spending and federal borrowing until early 2017. Expectations were for House passage Wednesday and final Senate approval next week, even as hard-right conservatives and farm-state lawmakers arrayed against the deal.

"That's good news for everybody. It's a step forward," President Barack Obama said of the deal Tuesday in Chicago. "And I hope both parties come together to pass this agreement without delay."

Among those declaring victory was departing Speaker John Boehner, R-Ohio, who was pivotal in crafting what amounts to a valedictory legislative prize for his supporters and a whack at his conservative House nemeses. The quarter-century House veteran serves his final day in Congress on Friday, driven into abrupt retirement by rebellious GOP hardliners who scorned his penchant for compromise with Obama and Democrats.

House bill revives Ex-Im Bank over conservative opposition

By Andrew Taylor

WASHINGTON (AP) — A strong coalition of establishment-backed Republicans and House Democrats voted overwhelmingly Tuesday to revive the Export-Import Bank, dealing a defeat to tea party conservatives and Speaker-to-be Paul Ryan.

The House approved the measure 313-118 as 127 Republicans joined with virtually every Democrat to support the bank, whose charter expired June 30. Since then, the bank has been unable to approve new applications to fulfill its mission of helping overseas buyers get financing to purchase U.S. exports like airplanes and heavy equipment. Supporters say the bank helps sustain tens of thousands of manufacturing jobs.

The legislation's fate is uncertain in the Senate.

Proponents of the bank forced a House vote through a rarely used procedure known as a discharge petition. They pushed a vote over the opposition of top House GOP leaders such as Majority Leader Kevin McCarthy of California, Whip Steve Scalise of Louisiana and Financial Services Committee Chairman Jeb Hensarling of Texas.

Statoil posts Q3 loss, feels sting of low oil price

By The Associated Press

STOCKHOLM (AP) — Norwegian oil and gas company Statoil posted a loss in the third quarter despite attempts to slash costs amid declining oil prices.

The state-controlled company posted a net loss Wednesday of 2.8 billion kroner ($330 million) in the July-September period, compared with a loss of 4.7 billion kronor in the same quarter last year.

Statoil cited "impairment charges and provisions," but it was also hit by declining revenue, which fell 24 percent to 112 billion kroner.

Low oil prices have put pressure on Statoil's high-cost offshore operations in the North Sea and Barents Sea.

German transport minister meets US officials on VW probe

By Michael Biesecker

WASHINGTON (AP) — Germany's top transportation official is pledging to cooperate closely with his American counterparts as the countries investigate Volkswagen's emissions-rigging scandal.

Transport Minister Alexander Dobrindt met in Washington this week with U.S. Transportation Secretary Anthony Foxx and Environmental Protection Agency Administrator Gina McCarthy. Dobrindt said his government will share information gleaned during its review of how the German automaker installed software designed to hide dirty emissions from its "Clean Diesel" cars sold since 2009 during U.S. compliance tests.

Both nations are conducting criminal investigations into VW's trickery, which the company first admitted to U.S. regulators last month. German police and prosecutors raided the company's global headquarters earlier this month seeking material to help clarify who knew about the cheating.

Dobrindt on Tuesday said he had scheduled further discussions with the U.S. officials and that the close partnership between the countries must be preserved.

Defense continues to contend ex-coal CEO focused on safety

By The Associated Press

CHARLESTON, W.Va. (AP) — With a key government witness on the stand, a former coal boss' defense team continued to contend his company prioritized safety and disciplined people when they made mistakes.

In Charleston federal court Tuesday, ex-Massey Energy CEO Don Blankenship's attorneys continued questioning former Massey subsidiary president Christopher Blanchard. Blanchard has testified since Thursday under an immunity agreement with the government.

Blankenship is charged with conspiring to break mine safety laws and lying to financial regulators about safety at Upper Big Branch, which exploded in 2010, killing 29 men. Blanchard's subsidiary oversaw the mine.

Blanchard continued to tell defense attorney William Taylor that he did not conspire with

Blankenship to break safety laws

Taylor discussed dozens of citations, memos and other documents to say Massey was concerned about safety under Blankenship's watch.

A message from America's Natural Gas Alliance

Clean is Powerful. Natural gas helps Georgia Power's plant generate electricity with 50% fewer emissions. Think about it.

LA Aqueduct flows after dam built for drought is dismantled

By Brian Melley

OLANCHA, Calif. (AP) — Water in the aqueduct that helped fuel Los Angeles' growth was flowing toward the city Wednesday for the first time in six months after workers removed an earthen and concrete dam that had diverted runoff to the parched Owens Valley.

With little mountain runoff due to a historic drought, water managers made the unprecedented decision to try to meet legal obligations to keep the Owens River flowing, control dust from a dry lake bed and irrigate pastures where cattle graze instead of sending water to the city.

For those in the Owens Valley, who have a history of conflict with the metropolis hundreds of miles to the south, the plugged-up aqueduct brought relief to some and misery to others.

Big effort to better understand bats takes wing in 31 states

By Keith Ridler

BOISE, Idaho (AP) — An effort spanning 31 states and 10 Canadian provinces has been working to better understand the ecological role that bats play, and the threats they face from climate change, habitat loss and wind energy development.

The North American Bat Monitoring Program involves acoustic surveys to detect the high-pitched frequencies emitted by the flying mammals as they capture bugs and navigate in the

dark.

"It's long overdue," said Patty Stevens, the U.S. Geological Survey's branch chief for Trust Species and Habitats at the Fort Collins Science Center in Colorado where the program's data will be stored and made available. "It's going to provide a lot of information to natural resource managers."

Researchers say the monitoring program has been spurred by a disease called white-nose syndrome that has killed millions of bats and is spreading.

Greek company pleads guilty to hiding ship's pollution

By The Associated Press

CORPUS CHRISTI, Texas (AP) — A ship management company based in Greece has agreed to pay $1 million in penalties after concealing that a ship it owned had dumped pollution into waters off the Texas Gulf Coast.

Chandris (Hellas) Inc. pleaded guilty on Tuesday in Corpus Christi federal court to violations of the Act to Prevent Pollution from Ships.

According to court records, the chief engineer of the M/V Sestrea — an 81,502 ton cargo ship Chandris operated — failed to document that the ship had dumped directly into the sea oily waste that should have been disposed through a separator aboard the vessel or burned in the ship's incinerator.

The ship had made stops in multiple ports in Texas, including Corpus Christi in January.

Chandris was also sentenced to three years of probation.

Green self-driving cars take center stage at Tokyo auto show

By Yuri Kageyama

TOKYO (AP) — Visions of cars that drive themselves without emitting a bit of pollution while entertaining passengers with online movies and social media are what's taking center stage at the Tokyo Motor Show.

Japan, home to the world's top-selling automaker, has a younger generation disinterested in owning or driving cars. The show is about wooing them back. It's also about pushing an

ambitious government-backed plan that paints Japan as a leader in automated driving technology.

Reporters got a preview look at the exhibition Wednesday, ahead of its opening to the public Oct. 30.

Nissan Motor Co. showed a concept vehicle loaded with laser scanners, a 360 degree camera setup, a radar and computer chips so the car can "think" to deliver autonomous driving. The Japanese automaker called it IDS, which stands for "intelligent driving system."

To: Fernandez, Antonio <fernandez.antonio@epa.gov>
Subject: Tier 3 phase in questions

Hi Tony,

I have a few questions in 3 general Tier 3 areas.

Interim/Final Tier 3

My first question is regarding 'final' Tier 3 vehicle requirements. In order for a vehicle to be 'final' or 'not Interim', does it have to meet all the requirements of Part 1066 testing procedures? I understand that 86.101 (d) must be met starting in 22MY, but can a vehicle be considered to have 'final' status prior to this by meeting the other Tier 3 requirements? Or, for example, a 19MY vehicle that meets all the other standards of Tier 3, but is not yet tested on fully 1066 compliant test cells considered a Tier 3? As we discussed "final" Tier 3 designation does not need to meet all of the 1066 requirements however at a minimum it will need to use 1066 PM requirements and the new NMOG calculation for E10. Chris Laroo can assist if further information is needed. See http://www.ecfr.gov/cgi-bin/text-idx?SID=7bc71fb487c9d818c7331cdb8c18e753&mc=true&node=se40.19.86_1101&rgn=div8

PM Phase-in

From 86.1811-17 (b)(7)

(iii) Vehicles meeting the Tier 3 PM standards must meet those standards over the useful life as specified in §86.1805. Note that Interim Tier 3 vehicles may have different useful life values for PM emission standards than for other emission standards. This is correct. The new PM standards also require 150k UL for the PM aspect while the other emissions could be 120k during the phase-in depending on what bin was used. My recommendation is to stay with the program goal of getting to a 50 state vehicle that meets the 150k for California and remains at 150k for Federal. This allows one set of tests on one fuel with the same aged parts to fulfill the requirements of both programs.

Can an Interim Tier 3 vehicle be used to satisfy the PM phase-in percentage? Can you tell me which 86.1805 section I should look in? Is the default 86.1805-17? For Tier 3 PM useful life can be 10/120k for vehicles less than 6000#, but must use 85% of the applicable Tier 3 standard? (I understand that these 10/120k vehicles are not LEVIII compliant)

→ An Interim Tier 3 vehicle is one that meet some but not all of the Tier 3 requirements. If it meets the Tier 3 PM standard, it counts toward the PM phase-in percentage. If it doesn't meet the Tier 3 PM standard, then it doesn't count toward meeting the Tier 3 PM percentage. That should all be self-evident;

→ The provisions of 86.1805-17 correspond to the Tier 3 standards in 86.1811-17. If this is a MY 2016 vehicle meeting Tier 3 early, then the section numbering by MY doesn't work so neatly, but nothing else makes sense.

→ The 85% multiplier applies only to the NMOG+NOx fleet-average standard over the FTP; there is no other consequence of selecting the shorter UL. Note that this UL arrangement applies

only for LDV and LDT1 (not all vehicles below 6000 lbs GVWR).

Cert carryover in 22MY

Must I redo cert testing in 22MY to demonstrate compliance to 86.101(d) or can I carryover packages certified prior (assuming they have used E10 by 20MY)?

That is my interpretation of

86.101 (b)

(3) For model years 2022 and later, manufacturers must use the test procedures specified in paragraph (d) of this section. Manufacturers may continue to use data based on the test procedures specified in paragraph (c) of this section for an engine family in 2022 and later model years, as long as the engine family is eligible for certification with carryover emission data.

→Carryover based on pre-1065 procedures is ok, as described in 86.101(b)(3).

Thanks very much! Your help is much appreciated.

Republican Lawmakers Float Mine Cleanup Bills, Slam EPA

Republican leaders of the House Committee on Natural Resources touted a package of bills on Thursday to help fix the cleanup process for abandoned mines in the United States, with the committee's head saying the U.S. Environmental Protection Agency's role in the Gold King Mine spill showed the agency wasn't up to the task.

Rail Inspector Shortage Raises Montana's Risks, Audit Says

A shortage of inspectors is one of several oversight gaps jeopardizing rail safety in Montana, a state with elevated railroad-related risks due to the volume of crude oil being drilled and transported, according to a recent state audit.

LITIGATION

Monsanto Tells 9th Circ. GMO Foes Can't Appeal Law's Nixing

Monsanto told the Ninth Circuit on Thursday that a bid by a citizens coalition trying to revive a Maui County, Hawaii, law restricting genetically modified crops should be dismissed for lack of standing since the citizens aren't elected officials or county agents.

Greenpeace Says Contempt Order Warrants Shell Suit Appeal

Greenpeace told the Ninth Circuit on Wednesday that as long as Shell wants to enforce a contempt order issued after the group effectively blocked one of the company's ships in July, it should be allowed to continue its appeal of an injunction even if the underlying case is moot.

Texas plaintiffs' lawyer Mikal Watts of Watts Guerra LLP on Thursday pled not guilty to charges he conspired to submit false claims stemming from the Deepwater Horizon oil spill to BP, and in a rebuttal to the indictment that was unsealed, said the blame for the alleged fraud rests outside his legal office.

Volkswagen Drivers' Emissions Suits Frozen For JPML Order

Federal judges in at least 13 states and the capital have paused drivers' emissions fraud suits against Volkswagen this week to await the U.S. Judicial Panel on Multidistrict Litigation's ruling that could centralize the actions for pre-trial proceedings.

LA Metro's Review Of Expansion Project Upheld On Appeal

The Los Angeles County Metropolitan Transportation Authority won an appeal Wednesday in California's Second Appellate District on claims challenging its environmental impact report for a subway expansion project, with the court saying a nearby hotel's allegations that it violated California environmental law were not valid.

Texas Water Agency Wants 5th Circ. Backing In Takings Suit

The city of San Antonio has urged the Fifth Circuit to uphold a district court's denial of water permits to a group of Texas landowners, saying a 2012 Texas Supreme Court ruling affirming groundwater property rights isn't applicable because the landowners missed an application deadline.

Enviros Slam Time-Out Bid In Ill.-Ind. Toll Road Fight

Transportation agencies should not be allowed to pause a lawsuit from three environmental groups as officials revise reports about the impact of a proposed expressway linking interstates in Illinois and Indiana, the environmental groups told an Illinois federal court Wednesday.

Enviros Challenge Permit For Ala. Coal Mine On River

Two environmental groups have sued the U.S. Army Corps of Engineers and the U.S. Fish and Wildlife Service in Alabama federal court, claiming that the groups didn't take the necessary care to determine if a coal mining permit would affect an Alabama river's ecosystem before approving it.

Policies Cover Tribes' Claims In Superfund Case, Court Told

A group of ironwork companies who want their insurers to help pay for the cleanup of a Superfund site at the Portland Harbor asked an Oregon federal judge Wednesday to reconsider whether the policies of an AIG Inc. subsidiary bar coverage for claims brought by five Native American tribes.

TerraForm Global Hit With Shareholder Suit Over $675M IPO

Investors in TerraForm Global, a clean energy yieldco, lodged a shareholder suit in California state court last week, accusing the company of failing to disclose that its performance would be impacted by the poor results of its sponsor, SunEdison, ahead of its $675 million initial

EXPERT ANALYSIS

Considering The Law On Corporate Environmental Crime

Clear-cut cases of large-scale corporate criminal violation of environmental laws are relatively rare. Because corporate scofflaws would face criminal prosecutions and civil and administrative penalties, along with serious public relations consequences, most sophisticated corporations recognize that deliberately flouting the law in this area just isn't worth it, says Kevin Sali of Kevin Sali LLC.

Wealth Management For Attorneys

As the curtain begins to fall on 2015, it's especially important for attorneys at firms operating on a Dec. 31 year-end to finalize their tax planning strategies. One of the biggest challenges is identifying a financial adviser who understands the unique demands facing attorneys, especially those pursing an equity partnership or who have already attained that status, says Stuart Riemer of Treasury Partners.

LEGAL INDUSTRY

4 Things Associates Hate About Their Jobs

As the junior professional in a law firm, associates are often tasked with projects that can leave them feeling underappreciated and overworked. Here, industry experts and attorneys expound on the common experiences in associate life that can make many attorneys' first jobs a not-so-rosy experience.

The 5 Biggest Mistakes You Can Make As A Lateral

Joining a new firm can seem like the perfect marriage, but attorneys can sully that relationship or blow it up altogether by failing to do their due diligence and making other key missteps. Here, experts share the five worst mistakes you can make as a lateral hire.

Law360's Weekly Verdict: Legal Lions & Lambs

Courtroom lions roared this week as Kline & Specter PC won a Pennsylvania high court reversal of a voided $20 million verdict and King & Spalding LLP took down a smoking death case against R.J. Reynolds Tobacco Co. Our legal lions are led by a onetime Dickstein Shapiro LLP lobbyist and politician who copped to a career-ending banking charge.

Justice Appointments Too Focused On Credentials, Alito Says

With all nine sitting Supreme Court justices holding law degrees from only a few schools, Associate Justice Samuel Alito said Thursday that perhaps the high court appointment process has become too focused on credentials, noting that many great jurists to grace the bench in the past lacked such "educational pedigree."

Volkswagen Drivers' Emissions Suits Frozen For JPML Order

By **Jody Godoy**

Law360, New York (October 29, 2015, 3:45 PM ET) -- Federal judges in at least 13 states and the capital have paused drivers' emissions fraud suits against Volkswagen this week to await the U.S. Judicial Panel on Multidistrict Litigation's ruling that could centralize the actions for pre-trial proceedings.

U.S. District Court judges have the authority to go ahead with proceedings while the JPML mulls the question of centralization, but federal judges in a number of courts have decided to freeze the actions, presumably to prevent rulings that could clash with potential findings in a centralized court.

The stay orders issued this week included one on Wednesday pausing 45 California suits over diesel-burning passenger cars that Volkswagen touted as environmentally friendly but has recently admitted were designed to cheat emissions standards.

U.S. District Judge David O. Carter, who presides in the Central District of California where those cases were filed, said the stay would conserve the court's resources, avoid conflicting rulings and cause minimal prejudice to the parties.

"The purposes of MDL Panel transfers are to further judicial economy and eliminate the potential for conflicting pretrial rulings," Judge Carter said. "Given those aims, the court is concerned that resolving any pending motions would lead to conflicting pretrial rulings and limit the ability of the judge who is ultimately assigned the consolidated litigation to manage the litigation in the way he or she sees fit."

Federal judges in Florida, Louisiana, Missouri, South Carolina, West Virginia, Georgia, Arkansas, Virginia, Wisconsin, New Jersey, Illinois, Tennessee, California and the D.C. also put pending consumer actions against Volkswagen on ice.

Christopher D'Angelo, one of the drivers suing the German automaker in California, had recently asked Judge Carter to **certify his proposed class action**, the type of decision the judge found "better left to the judge who is assigned the cases."

The JPML is set to hear oral arguments on whether or not to consolidate the cases on Dec. 3, according to Judge Carter's order.

D'Angelo was also the first to **ask for consolidation** of the mounting number of emissions fraud suits across the U.S. The driver argued the cases should be brought to Los Angeles for pre-trial

matters because the court has experience with similar cases and because the California Air Resources Board has been at the **forefront of the investigation** into Volkswagen's so-called defeat devices along with the U.S. Environmental Protection Agency.

D'Angelo is represented by David J. Vendler and Kevin M. Pollack of Morris Polich & Purdy LLP.

Volkswagen is represented by John Nadolenco of Mayer Brown LLP.

The case is Christopher D'Angelo v. Volkswagen Group of America Inc. et al., case number2:15-cv-07390, in the U.S. District Court for the Central District of California.

Ex. 7

Your labeling plan for the 2016 Audi S8 and Audi S8 "plus" sounds fine to me.

Dave

From: Ex. 7
Sent: Friday, October 30, 2015 8:33 AM
To: Good, David
Cc: Ex. 7
Subject: 2016 Audi S8 and S8 plus Fuel Economy Label Discussion

Hi Dave;

To summarize the phone discussion we had yesterday I have the following.

The original 2016 "Audi S8" was labeled in March 2015. Audi later introduced a higher performance engine as this model will be marketed as the "Audi S8 plus" that replaces the original engine in production, with a running change. The recalculated label values when this new engine is sales weighted into the base level result in lower city and highway label values, combined is unchanged. Since the option to relabel is left to the manufacture under the running change and fuel economy calculation regulations it was proposed to begin to use the new values with the introduction of the S8 plus models this fall (November 2015). Please see the email summary of September 14, 2015, attached.

The Audi logistic department has assured me that no new S8 plus models will leave the ports for

dealerships until all the original Audi S8 models have been allocated and are exhaust from the ports. In very limited cases an original Monroney label (containing the fuel economy label) may have to be reprinted due to dealer trading and address changes. That being the case they will reprint the Monroney label with the original S8 values. Under no circumstance can the new "Audi S8 plus" models be printed without the recalculated lower fuel economy label values.

You said that this process would not create any difficulties on your end.

Best regards,

Subject: WLTP IWG No. 12 - Minutes & Finalization of GTR Working document
WLTP-12-33e - Minutes WLTP IWG meeting_No 12_151008.pdf

Dear IWG members,

Please apologize that I've disappeared for weeks. Due to other emission related events I was forced to prioritize my working items and my time was completely blocked.

I guess all interested parties are already aware of the fact that the final WLTP IWG meeting in Tokyo was a success. The gtr draft proposals have been adopted and the remaining open items have been closed. In this regard I would like to thank Vize-Chair Kobayashi-san and Co-Technical Secretary Ichikawa-san, who finalized successfully WLTP phase 1B! Special thanks also too all the experts who supported the leading team in Tokyo, especially Murkus Bergmann, who prepared the meeting minutes (see attachment WLTP-12-33e).

The greatest contribution to the success of the meeting has of course already made in advance of the meeting. All proposals were excellent prepared, pre-discussed and drafted. In this regard I would like to thank all involved task force & subgroup leaders and the countless experts who spent so much efforts to improve GTR No. 15. What I appreciate the most is that WLTP IWG worked as a team. Of course experts from different sides have not always the same views, therefore some of the discussions have been hard, but I always recognized that representatives from Governments, NGOs and independent experts discussed in a very fair, open and constructive way. Independent from different viewpoints, the main aim of all experts was to improve the contents of the GTR. Thanks for that, it was really a pleasure to work with all of you!

Another special thank goes to our Drafting Coordinator, Serge Dubuc. Honestly, he had probably the toughest job and definitely one I didn't envy him for. I guess all experts who were involved in the drafting work know what I mean. This is to inform you that Serge Dubuc successfully finalized the GTR draft document until the given deadline of the UN. The draft was provided to the UN Secretariat on October 19th. **The GRPE working document is foreseen to be uploaded to the UN webpage on November 3rd!**

Btw: all other new documents from the Tokyo meeting have been uploaded to the IWG folder on the UN webpage:

https://www2.unece.org/wiki/display/trans/WLTP+12th+session

I'm looking forward to seeing some you again in Geneva in January!

Best regards

Stephan Redmann

Working Paper No WLTP-12-33e
(12th WLTP IWG meeting)

M I N U T E S

of the 12th WLTP IWG Meeting

Tokyo, Japan 29.09.2015 – 01.10.2015

1. Welcome & organization

Vice Chair Kobayashi-san welcomed the participants for the meeting No 12 in Japan. Ohashi-san from MLIT welcomed the participants and expressed the need for international harmonization and outlined that in Japan the gtr will be incorporated in regional legislation soon.

List of Participants

Appendix: Participants list

2. Adoption of agenda & minutes

Minutes of the 11th IWG meeting (WLTP-11-28e) were adopted without changes.

The presented agenda for the 12th meeting was adopted.

3. Open Issues Table

Update since 11th IWG meeting (WLTP-12-03e) was presented. Ichikawa-san asked for positive and constructive discussions of all participants to close all open issues during the Tokyo meeting.

4. Main part & Cycle issues (Annex 1 & 2) (Wednesday afternoon)

Downscaling / gearshifting (OIL #4-9):

- Progress report by H. Steven (WLTP-12-17e-rev1)
- **Adoption of gtr draft proposals**:

  # 06: definition of n_{min_drive}

VW FOIA, EPA 06/20/2017 2017-FFP_035462

1b_6: Additional requirements from the TF: vehicle classification, downscaling, reporting calculation of average gear

Heinz Steven gave an overview on the latest results of the gear shift task force. The text of the gtr has been amended on several paragraphs for clarity. A definition to determine the full load curve according to R85 and the requirement to measure n_{idle} will be added in the oncoming drafting meeting. The proposal of amendments was **adopted.**

For ICE vehicles with downscaled cycles it was unclear whether to apply the downscaled cycle of vehicle L or H for the interpolation family. Chr. Lueginger proposed the following calculation procedure. For ICE vehicles, tests with vehicle L and H will be driven with the applicable (downscaled) cycle and the interpolation of the cycle energies will be based on the individual downscaled cycles. At the request of the manufacturer the cycle for vehicle L can be used instead of individual downscaled cycles. Theoretically, this methodology is also applied for PEV downscale

- **Adopted**

In conjunction with the above methodology (apply individual downscaled cycles), IWG has made a decision to make the selection of the applicable cycle on the kerb mass - not on the test mass requested by OICA.

Since a definition of "unladen mass" is not in the gtr, all calculations where "unladen mass" is used will be changed to calculations with "mass in running order".

Manual gear shift n_{min_drive}: Chr. Lueginger presents a proposal on n_{min_drive} based on a former proposal by VOLVO that gives a CO_2 benefit for technologies that achieve higher low end torque.

- The current definition of n_{min_drive} in the gtr will be kept. The CPs ask to postpone the decision and to discuss this issue again in phase 2a.

VW FOIA, EPA 06/20/2017 2017-FFP_035463

5. **RLD & dyno setting (Annex 4)** (Wednesday morning)

- Progress report on RLD issues by R. Cuelenaere (WLTP-12-25e).

  Rob Cuelenaere gave an overview on the good progress by outpointing that all open issues of the subgroup Annex 4 were ready for adoption.

  Torquemeter, onboard anemometer, Default road load parameters, road load matrix family, tyre rolling resistance, wind tunnel – chassis dyno .etc.

  Document WLTP 12-26e by A. Feucht on tolerances, margins, precisions was presented by Rob Cuelenaere:

  4.3.1.3.4. Restrict the number of parts for split runs for road load setting to 3

  - Japan does not support the proposal, since several test tracks would have to be closed – Japan: keep the current text and discuss it again in phase 2 in conjunction with ISC (in service conformity).

  The proposal to change atmospheric temperature 278 to 313 K--> 278 to 303 K was rejected. This temperature range was determined based on intensive discussion and political agreement during phase1a.

  If the temperature difference between end and start of the coastdown tests is more than 5 K the correction has to be done separately.

  4.1.1.2. The **green text** in the proposal has to be amended for clarification. If the temperature of all individual coastdown runs is in a range of 5 K the mean temperature can be used for calculation. When 5 K are exceeded the temperature of the individual runs has to be used for calculation. The drafting task force will deal with this issue.

  - **Adopted**

- **Adoption of gtr draft proposals**:

  # 4, 7, 15, 16, 20: Torque meter method (incl. road load curve correction / chassis dyno load setting).

VW FOIA, EPA 06/20/2017 2017-FFP_035464

Rob Cuelenaere presented WLTP 12-05. All approaches and open issues were drafted and ready for adoption (lead FORD). Rob briefly described the open issues and the proposed approach in a table.

Definitions have been updated for consistency in Annex 4 (e.g. Road load replaces total resistance …).

- Changes in Annex 1 and Annex 2 were necessary to update the method for determination of the downscaling factor to account for data coming from the torque meter method.
- Annex 4: Definition of road load coefficients f0, f1, f2

Accuracies were updated

4.4.1. India asked to also incorporate **national** standards in addition to international standards for the calibration of torque meters.

India: 4.3.2. meaning of the two different tolerances for velocity deviation (one from mean and one from reference speed) has to be clarified in the drafting group.

7.3.3.1.: India asked for an additional sentence to be drafted (conditions when the dynamic radius has to be calculated and how to deal with vehicles than cannot reach the speed of 80 km/h) India is asked to draft a text to clarify the provisions for dynamic radius.

- All issues were **adopted**, comments made by India have to be reflected in the drafting meeting

- Draft gtr proposal by TNO (WLTP-12-05e)

13: Onboard-anemometry / wind conditions

- Gtr improvements (e.g. based on SAE) by Ford (WLTP-12-06e)

Rob Anthony (Ford) presented (WLTP-12-06e) via telco. A special focus was on open issue #13:

VW FOIA, EPA 06/20/2017 2017-FFP_035465

Rob Cuelenaere presented several amendments for clarity in numerous paragraphs.

E.g.: Wind conditions were set to max 7m/s, with peaks up to 10 m/s and cross wind with a maximum speed of 4 m/s

Warm up and stabilization has been aligned with the stationary method, additional instrumentation and calibration is included.

Vehicle coastdown procedure: number of tests (at least 10 consecutive runs (5 pairs)) and statistical criteria have been specified.

The position of the anemometer on the bonnet was added.

India pointed out that the referenced ISO in the draft text is from 2006, and asks Rob to confirm if there is a newer version of this standard. Rob points out that the proposal is mainly based on the SAE procedure and offered to search for updated ISO standards for calibration.

- All changes were **Adopted**

17: Road Load Matrix Family

- Gtr draft proposal (WLTP-12-07e)
- Combined progress report by RDW / Daimler (WLTP-12-24e)

André Rijnders gave an overview on the current state of the Default Road Load proposal.

Rob Cuelenaere presented the draft text (WLTP 12-07) on changes of the gtr with respect to the road load matrix issues.

- **Adopted**

18: Wind tunnel method as alternative RLD method

- Chassis dyno prescriptions (WLTP-12-14-rev2e)
- Final GTR draft wind tunnel method (WLTP-12-21e)

VW FOIA, EPA 06/20/2017 2017-FFP_035466

Rob Cuelenaere presented the issues. The wind tunnel method has already been adopted in a former IWG. Additional provisions for the use of dyno rollers have been developed.

Chr. Lueginger gave an overview on Chassis dynamometer descriptions in the gtr and on amendments and changes to current texts. The alignment of the provisions for dynamometers for emission measurement testing (Annex 6) and dynamometers used for determination of forces as an alternative for the use of flat belts were presented.

- All issues were **Adopted**

1b_3: Tyre selection

Gtr draft proposal by Klaus Steininger, if available

Klaus Steininger pointed out that no data has been received by ETRTO or manufacturers and proposed to keep the gtr text as it is. If further information will be available the issue might be reopened again in phase 2.

- For information purposes:

1b_5 - Overview matrix of Annex 4 tolerances by Japan (WLTP-12- 26e)
- Study on Evaluation Criteria of Road Load Tolerance in Korea; (WLTP-12- 29e-rev1) by Korea

K. Cha-Ryung of KATRI presented a road load evaluation based on energy calculation. If the declared road load and the measured road loads lead to differences in energy lower than 15 % the measured road load will be used for certification. Measurements of road load will be performed by Korean authorities.

EU Com supports the general approach of Korea and wants to evaluate it in phase 2.

6. Test procedure and conditions (Annex 6) (Tuesday)

VW FOIA, EPA 06/20/2017 2017-FFP_035467

- **Adoption of gtr draft proposals**:

  # 27: Number of tests

  - Progress report by T. Fujiwara (WLTP-12-15e)

  - Gtr draft proposal (WLTP-12-16e) by T. Fujiwara, incl. proposals for hybrid vehicles and solution for dp values. If not yet agreed on expert level, **decision** by CPs on dp values approach

  Draft gtr text was presented by Fujiwara-san including phase specific values. It was proposed to have **dCO2 values as CP option**.

  - **Adopted**

  Remarks: Korea intends to align dCO2 with Japan.

  India has not discussed the issue but a harmonized dCO2 is preferred.

  # New: Post processing proposal by Chr. Lueginger

  - Starting note (WLTP-12-08-rev1e)
  - GTR draft proposal (WLTP-12-09-rev1e)
  - Excel tool (WLTP-12-10-rev1e)

  Ch. Lueginger presented a starting note on a calculation concept.

  For ICE vehicles the concept was **adopted** by CPs
  For NOVC-HEV, OVC-HEV(CS) and fuel cell vehicles the concept **Option 1** was **adopted**.

  The order of calculations was adopted, excluding EV specific issues.

  The work will be finished within phase 1b, Ch. Lueginger will lead the process.

  For OVC-HEV(CD) and PEV, data post-processing will be determined during phase2.

  For Ki determination RCB correction is not necessary.

  # 29, 41: Speed trace violations / Drive Trace Index

VW FOIA, EPA 06/20/2017 2017-FFP_035468

- Progress report and gtr draft proposal by N. Ichikawa (WLTP-12-27e)

Ichikawa-san presented the outcome of his taskforce on Speed trace violations / Drive Trace Index. Drive trace tolerances will be kept but not shown on the drivers aid screen.

Indexes according to SAE J 2951 will be applied as a reference without criterion (data collection for monitoring).

Further approaches could be considered after the monitoring phase in 2020.

- **Adopted** by CPs

Ki determination – family definition

Proposal: adopt modified provisions of R83

Include (c) in (b) dosage an additive system in type of system

(e) location (temperature +/- 100 °C at 2nd highest reference speed of the applicable WLTC test cycle)

Vehicles are allowed in the family provided they have a test mass, which is up to 250 kg higher or any lower than that of the vehicle used in the test.

- **Adopted**

7. Calculations (Annex 7) (wednesday)

46, 47 Additional pollutants

- Report (WLTP-12-22e), incl. validation results, by C. Astorga

Cova Astorga gave an overview on the laboratory equipment at JRC and the measurement techniques used to measure Ethanol, Acetaldehyde and Formaldehyde. The performance, repeatability and precision of all measurements and therefore instruments used was satisfactory.

- introduction of the presented additional methods adopted, draft text will be provided to add pollutant group, measurement equipment group and IWG consecutively. If text on all or individual methods will be ready and agreed upon during phase 1b it will be incorporated in the gtr.

Further work and remaining draft text will be provided during phase 2.

- **Adopted**

VW FOIA, EPA 06/20/2017 2017-FFP_035469

- **Adoption of gtr draft proposals:**

Calculation formulas for ethanol and aldehydes

Presentation by Thomas Adam (AUDI) was given by Markus Bergmann. Since the acronym OHC implies that all oxygenated hydrocarbons are covered and not only Ethanol, Acetaldehyde and Formaldehyde it was decided to use the acronym EAF.

- The principle is **adopted** by the CPs – draft text to be provided by M. Bergmann and to be introduced in the drafting meeting on Friday.

8. WLTP Subgroup EV (Annex 8) (Monday)

- Progress report (WLTP-12-19e) and **adoption of gtr draft proposals:**

Niikuni-san informed the group that all remaining issues were successfully completed.

02, 55, 56: The interpolation family approach and phase specific calculation family definition was accomplished:

The approach will be used, but there is no interpolation approach for R_{cda} in phase 1b.

Niikuni-san explained how R_{cda} leads to different results in blended mode and electric mode and has no relevant information for the customer, furthermore the linearity of the interpolation line is not given.

- **Adopted**

51: Mode selectable switch

OVC-HEV in CD, NOVC-HEV and OVC-HEV in CS and PEV

Flowcharts for mode selection were presented.

Clarification: The manufacturer has to give evidence about the mode of highest electric consumption, on request of the authorities the electric consumption has to be shown.

- **Adopted**

52: End of PEV range criteria

The downscaling method of the xHigh phase for PEV was introduced. It was decided to have capped speed and distance compensation as a regional

VW FOIA, EPA 06/20/2017 2017-FFP_035470

option. Furthermore, a new method for the compensation of running distance was introduced.

The method of capped speed is now available for **all types of vehicles** with compensation of running distance.

□ **Adopted**

58: PEV shorten test procedure

Depending on the maximum electric range different procedures are mandatory (low range: consecutive cycles, high range: shortened test procedure) In the shortened test procedure the applicable cycle shall be used (e.g. capped speed cycle).

□ **Adopted**

Implementation of capped speed for speed limited vehicles and compensation of running distance is in line with the procedure for ICE vehicles. The EV group asks to incorporate it in Annex 1:

□ **Adopted** by all CPs with the following restrictions or amendments

Japan adopted **as CP option**

India adopted (mid, high and High phase to be included), text will be modified by Heinz Steven accordingly

The definition of max speed shall be as defined in R-86 or as defined by the CP.

- Phase 2 issues:

Classification of EVs and power determination and interpolation of Rcda.

9. GTR Drafting (Thursday)

- Overview

- Progress report by Drafting Coordinator, S. Dubuc (WLTP-12-18e)

VW FOIA, EPA 06/20/2017 2017-FFP_035471

- Current GTR draft (WLTP-12-04e & WLTP-12-04_clean)
- Overview on open drafting issues (WLTP-12-18e)

Serge Dubuc reported on the current discussions, drafting issues and adoptions. Numbers of equations and the respective cross references will be eliminated. He presented the dates for the next draft meetings and gave an overview on milestones of the gtr.

- Definitions
  - Proposal for gtr amendment by SG Drafting (WLTP-12-13e), incl. VPSD definitions (OIL#1b_1)
  - Final review of GTR definitions (WLTP-12-20e)
  - Proposals for PM / PN / Particle matter definitions (WLTP-12-12e)

Bill Coleman presented a review on definitions especially focussing on the differences of particulate matter and particulate matter emissions. Further work has been done e.g. on road load, clarification of the term mode (driver selectable) vs. vehicle coast down mode, all electric range (AER) vs. pure electric range (PER).

The definition of defeat device will be revised in the EU and discussed again in phase 2.

- GTR Part A & Technical Report
  - Status report of review and necessary updates by Technical Sponsors (Japan, EC)

Drafting will be financed by EU-COM and drafting shall be done by Iddo Riemersma.

Mr. Riemersma asked the group to give background information on the background why several proposals have been made and if they were based on strong opinions by CPs or data by latest at end of October. The technical report of phase 1 will be amended by issues of phase 1 b. A formal document (executive summary for the gtr) has to be prepared.

Part I of the gtr has to be prepared by EU-COM.

I. General issues (Thursday)

- Round Robin exercises:
  - Reports on the European and Asian exercise by C. Vallaude and

VW FOIA, EPA 06/20/2017 2017-FFP_035472

Haniu-san (WLTP-12-xyz / -xyz)

The Asian Round Robin Test Interim report was given by Haniu–san. He explained the delay of 1 month was due to an explosion in Tianjin port. The vehicle exchange between Asia and Europe has to be discussed.

Up to now, no issues came up that would lead to a change of the current gtr text.

The European Round Robin Test Interim report was given by Bill Coleman

Bill presented a list of items with inconsistencies in the procedure in the different labs. The list will be updated and refined for the final report to be given by Céline Vallaude.

II. WLTP Phase 2 (Thursday)

Oral report on state of play by Technical Sponsors, e.g. update of mandate document for WP.29 (if available and if time allows)

Ichikawa-san informed the group about a meeting of the EU Commission and MLIT on Monday this week 28.9.2015. The following decisions were made:

The E-Lab Subgroup will continue their work with the issues mentioned in the open issue list for phase 2. For all other issue several task forces will be established. He gave information that OBD may be described in an additional gtr.

The list of phase 2 working items and schedule presented and will be circulated. Ichikawa-san asked for additional input.

III. Meeting schedule (Thursday)

- 13th WLTP IWG Meeting, Geneva, **Switzerland**
  11th January 2016, 14:30 – 17:30, possible extension to January 12th
  - Review of Informal document for amending the WLTP Phase 1B working

VW FOIA, EPA 06/20/2017 2017-FFP_035473

document, only if necessary.

- Information on WLTP Phase 2 organization

IV. **AoB**

Matthias Naegeli presented the measurement tolerances of current transducers in the gtr Annex 6 and 8. Currently there is no measurement equipment on the market that fulfills the requirements of the gtr. It is proposed to align the tolerances in Annex 6 with Annex 8. The proposed tolerances for the measurement of current for conventional vehicles are 1% of reading, 0.3 % full scale.

☐ **Adopted**

Further clarification was given that if a vehicle L is class 3 but a vehicle H is class 2 the two vehicles do not belong to the same interpolation family.

Narusawa-san gave an overview on how the gtr for type 1 tests will be implemented in new regulations with different regional levels and a separate regulation for e.g. Type II tests.

Markus Bergmann

WLTP IWG

VW FOIA, EPA 06/20/2017 2017-FFP_035474

Subject: Re: 2016 FE Guide - Errors in Verify as of 6AM on Oct 27, 2015; Audi A3 etron PHEV errors attached
VW_Group_2016 FE Guide-all rel dates-no-sales-10-27-2015.xlsx

Richard,

Re: 2016 FE Guide - Errors in Verify as of 6AM on Oct 27, 2015; Audi A3 etron PHEV errors attached

Attached are the data in Verify as of 6AM on Oct 27, 2015. The PHEV data is in a separate tab than the data for conventional vehicles. Labels with pea green fill in the first few columns have errors which need to be corrected before I can have the data posted on www.fueleconomy.gov. The errors are as follows:

A3 etron:

PHEV; Errors are highlighted in yellow fill with the correct values shown in the two rows below the cell where the error occurred; Error----CS driving range should be 367 (not 380) per v18 calculator; Error---charge depleting (CD) (fuel = electricity) unrounded adjusted city/hwy energy consumption values should be 41.7/39.1 kw-hr/100 mi (instead of 42/39) to agree with v18 calculator; Error---please revise CD (fuel = electricity) unrounded unadjusted city/hwy/comb MPGe values to 114.96/123.00/118.44 mpge (instead of 0/0/0) to agree with v18 calculator; Warning - number of battery packs exceed 4; please list battery packs, not cells; Error-- combined unadjusted FE more than 0.0001 difference from our calculation of 29.515.; Please revise Verify as needed.

A3 etron Ultra:

PHEV; Errors are highlighted in yellow fill with the correct values shown in the two rows below the cell where the error occurred; Error---CS driving range should be 412 (not 430) per v18 calculator; Error---please revise CD (fuel = electricity) unrounded unadjusted city/hwy/comb MPGe values to 122.52/123.63/123.02 mpge (instead of 0/0/0) to agree with v18 calculator; Error---please revise CD (fuel = electricity) unadjusted hwy mpge from 86.5 to 86.541 to agree with v18 calculator; Error please revise CS (fuel = gasoline) Unadjusted combined CO2 from 164.5 to 165.95 to agree with v18 calculator; Error please revise Battery Charge time (where fuel = electricity) from 2.5 to 3.7 hours; Warning - number of battery packs exceed 4; please list battery packs, not cells; Please revise Verify as needed.

Please make any needed corrections to Verify when you get a chance and let me know when they have been corrected.

Thanks

Dave

IUVP Waver request2.pdf

Hi Bill, hi Jim,

Overall we got pretty good responses for our CY 2015 IUVP program, but it is always difficult to find cars over 90 K miles.

So here are 6 wavers in one document where we request to test cars with lower mileage.

We got responses for all test groups and have cars lined up for testing but they are under the 75% of full Useful life.

Maybe you can give me a heads up so we can proceed with our testing.

Thanks for your help and have a good weekend.

Tobias Glas

TOP NEWS

Robins Kaplan Says Atty Bungled Judge's VW Counsel Order

Robins Kaplan LLP and five other law firms complained to a Virginia federal judge on Friday that an attorney temporarily leading representation for drivers in cases over Volkswagen's diesel emissions deception wasn't listening when the judge said attorneys in the 20 cases should confer on co-lead counsel, because instead he chose his own two co-counsel.

Clinton, Enviros Urge DOJ To Probe Exxon Climate Work

Environmental and civil rights groups on Friday urged the U.S. Department of Justice to investigate whether Exxon Mobil Corp. deliberately covered up its climate change knowledge, while Democratic presidential candidate Hillary Clinton joined a list of politicians calling for probe of the energy giant.

Enviros Ask FERC For Comprehensive Study Of 4 Pipelines

About 30 environmental groups sent a letter to the Federal Energy Regulatory Commission on Friday asking that a cumulative environmental impact study be done on four proposed natural gas pipelines to run through Virginia and West Virginia.

EPA Will Reconsider Approval Of Ky. Selenium Standards

The federal government, the state of Kentucky and industry groups said Friday they've settled a suit brought by environmentalists seeking to overturn the state's new water quality standards for selenium, in which the EPA will redo its review of the state's standards for the coal-mining byproduct.

Resort Owner Says Its Law Firm Betrayed It In Enviro Suit

A California resort and golf course owner has said that Wood Smith Henning & Berman LLP, the firm hired by an insurer to defend it against environmental claims, should be disqualified for allegedly betraying the company's interests to help the insurer, according to documents made available Friday.

3 Kinds Of Legal Battles Being Fueled By Low Oil Prices

With no end to the oil price slump in sight, oil and gas companies are increasingly scaling back their drilling and production activities, and the fallout will result in more courtroom battles between industry players desperate to maintain their piece of a shrinking financial pie. Here are three litigation hot spots attorneys will be watching closely as the oil price drought continues.

POLICY & REGULATION

Enviro Groups Press Lawmakers On TPP Support

A throng of environmental and consumer advocacy groups presented members of the U.S. Congress on Thursday with their ideal vision for the Trans-Pacific Partnership, imploring the lawmakers to oppose the 12-nation accord if those lofty standards are not met once the text of the agreement is published.

LITIGATION

VW Says Buyback Over Emissions Scam Would Cost Billions

Volkswagen urged a Missouri federal judge on Thursday not to impose a buyback program requested by a man leading one of many proposed class actions over the company's use of software to cheat emissions tests, claiming that it could wind up costing the company "many billions of dollars."

Enviros Say 10th Circ. Can't Hear Navajo Co. On Mine Permit

Environmental groups urged the Tenth Circuit Thursday to reject tribe-owned Navajo Transitional Energy Co. LLC's bid to nix a ruling vacating the company's permit to expand a New Mexico coal mine, arguing the appeals court lacked jurisdiction and a recent agency finding didn't moot the lower court decision.

Ind. Court Kicks $90M Project Dispute Back For Further Work

An Indiana utility company can't yet pass on to its ratepayers about $90 million in costs for new emission controls on its coal-fired power plants, the state appeals court said Thursday, remanding the decision to the Indiana Utility Regulatory Commission for further consideration.

Int'l Paper Looks To Reopen Cleanup Suit After Mediation Fails

International Paper Co. and a Georgia-Pacific LLC unit on Friday asked a New Jersey federal judge to reopen a case that was administratively closed in July when the companies agreed to try mediation that has since failed with the consumer packaging company they sued over Superfund cleanup as part of a decades-old spinoff deal.

Wind Energy Group Tells 7th Circ. Not To Hurt Contracts

A wind industry group told the Seventh Circuit in a Thursday amicus brief to reject any suggestion that utilities can use market rule changes to skirt the terms of power-purchase agreements, regardless of the outcome of a contractual dispute between Duke Energy and an Indiana wind farm.

TerraForm Global Faces Another Suit Over $675M IPO

Clean energy yieldco TerraForm Global Inc. and its sponsor SunEdison Inc. misled investors in TerraForm's $675 million initial public offering by hiding bad financial news about SunEdison that would devastate the yieldco, a shareholder claimed in California federal court on Thursday, days after a similar case was lodged in state court.

DEALS

RWE, Others Team Up For $2.3 Billion UK Wind Farm

Germany power company RWE Innogy announced on Friday that it will be partnering with the U.K.'s Green Investment Bank, Siemens Financial Services and Macquarie Capital to fund a £1.5 billion ($2.3 billion), 336-megawatt offshore wind farm off the coast of the U.K.

EXPERT ANALYSIS

The 40-Year Legacy Of Energy Efficiency Legislation

Forty years after its passage, the Energy Policy and Conservation Act remains a cornerstone of energy policy and will retain its relevance given the role energy efficiency will play in both the Clean Power Plan's implementation and at the forthcoming United Nations Climate Change Conference in Paris, say Scott Blake Harris and John Hodges of Harris Wiltshire & Grannis LLP.

In Congress: Default Averted, A Return To The 'Typical'

After last week's historic events on Capitol Hill, this week in Congress will be more typical, say Richard Hertling and Kaitlyn McClure of Covington & Burling LLP. Expect consideration of everything from the controversial Waters of the United States rule and the transportation bill to cross-border data protection and testimony by Fed Chairwoman Janet Yellen.

3 No-Nos When Dealing With A Judge

Courtrooms can heat up as both sides fight to prove their cases. But lawyers must take pains to avoid losing their cool in front of a judge and blurting out something that should have remained unsaid. Here are three things that can tank a judge's opinion of a lawyer, based on real stories of attorneys who have seen a chill descend on courtrooms after certain phrases come up.

Foley, Eversheds Talks Signal More Trans-Atlantic Tie-Ups

The spread of the Swiss verein model and growing convergence between U.S. and United Kingdom firms will encourage more cross-Atlantic merger talks like the one rumored to be in the works at Eversheds LLP and Foley & Lardner LLP, experts said.

The GC's Weekly Cheat Sheet

From an information-sharing bill that might protect companies from cyberthreats to a bid to get Congress to crack down on so-called patent trolls, here's a roundup of corporate legal and legislative developments from the past week that all general counsels need to know.

In Case You Missed It: Hottest Firms And Stories On Law360

EPA Accuses VW Of Using Defeat Devices On Porsche, More Audi Models

Liane Yvkoff

NOV 2, 2015 @ 02:17 PM 54 VIEWS

Volkswagen's still untallied bill for its emissions violations just got bigger.

Today the Environmental Protections Agency and the California Air Resources Board notified the German auto manufacturer that it has identified emissions defeat devices installed in more

vehicles throughout the Volkswagen Auto Group brand. The EPA and CARB says that VW, Audi and Porsche light duty diesel vehicles equipped with its 3.0 liter engines for model years 2014 through 2016 are also equipped with the defeat devices that throttle down nitrogen oxide (NOx) during emission testing. Volkswagen AG already was notified of violations found in VW and Audi vehicles equipped with its 2.0-liter diesel engine. The addition of the 3.0-liter diesel engine adds approximately 10,000 vehicles to the number of affected vehicles.

The expansion of the scandal from mainly VW to Audi and Porsche casts a dark shadow on these jewels of the VW AG crown. This could tarnish the reputation of these luxury manufacturers and potentially slow growth, even if only a small percentage of the vehicles are equipped with compromised diesel emissions systems.

"Audi, which has been on a roll in terms of sales, reputation and image of late, now is being drawn deeper into the quagmire," says Michelle Krebs, senior analyst for Autotrader. "Previously, only the low-volume A3 was under scrutiny, but now Audi's core models are under fire from regulators as well."

Volkswagen will be required to fix these vehicle's emissions systems, which on the road emit up to nine times EPA's standard. CARB has set a November 20 deadline for the manufacturer to deliver a draft of recall plans.

Affected 2.0 liter diesel models include:

Jetta (MY 2009 – 2015)

Jetta Sportwagen (MY 2009-2014)

Beetle (MY 2012 – 2015)

Beetle Convertible (MY 2012-2015)

Audi A3 (MY 2010 – 2015)

Golf (MY 2010 – 2015)

Golf Sportwagen (MY 2015)

Passat (MY 2012-2015)

Affected 3.0 liter diesel models include:

Volkswagen Touareg (MY 2014)

Porsche Cayenne (MY 2015)

Audi A6 Quattro (MY 2016)

Audi A7 Quattro (MY 2016)

Audi A8 (MY 2016)

Audi Q5 (MY 2016)

MLive (Michigan) (update)

http://www.mlive.com/auto/index.ssf/2015/11/epa_says_volkswagen_also_used.html

EPA says Volkswagen also rigged 3-liter diesels in Audi, Porsche and VW cars

David Muller

DETROIT, MI - A major scandal for Volkswagen and its use of emissions tricking-software on a 2.0-liter engine in 11 million cars is likely to be expanded to another engine and thousands more vehicles.

On Monday the U.S. Environmental Protection Agency issued a new Notice of Violation for VW, Porsche and Audi models with a 3.0-liter diesel engine.

The EPA and the California Air Resources Board said the 2014 VW Touareg, the 2015 Porsche Cayenne, and the 2016 Audi A6 Quattro, A7 Quattro, A8, A8L, and Q5 with diesel engines all have software that causes the vehicles to pass lab emissions tests but, in regular driving, emit up to nine times the EPA's standard.

The latest notice from the EPA covers about 10,000 diesel vehicles sold in the U.S., and an unknown amount not yet sold.

"VW has once again failed its obligation to comply with the law that protects clean air for all Americans," Cynthia Giles, assistant administrator for the EPA's enforcement and compliance assurance, said in a statement. She added that the EPA and state and federal partners will continue to investigate.

A spokesperson for VW could not immediately be reached for comment Monday afternoon.

In September, the EPA and the CARB issued a similar notice for 482,000 VW cars with a 2.0-liter diesel engine, and VW admitted responsibility, touching off the largest scandal in the German automaker's 78-year history.

The EPA and the CARB uncovered the defeat device software in the Volkswagen cars after independent analysis at West Virginia University raised questions about the cars' emissions levels.

The Volkswagen cars would meet emissions standards tests in a laboratory or testing station, but in normal operation, they emit nitrogen oxides at up to 40 times the standard, according to the EPA.

Last month, Volkswagen of American CEO Michael Horn told lawmakers on Capitol Hill that the software in question was developed in Germany, totally out of his "jurisdiction." He said the decision to develop such software appeared to be limited to a rogue group of engineers.

Volkswagen has had its corporate offices in Germany raided, and faces several investigations and lawsuits.

The company's former CEO, Martin Winterkorn, stepped down from the helm of Volkswagen AG last month and has since named Porsche brand chief Matthias Mueller as his replacement.

"The official expansion of this problem from the Volkswagen brand, and a single Audi model, on to multiple Audi models and at least one Porsche, casts a darker shadow on the VW Group," said Karl Brauer, senior analyst for Kelley Blue Book. "It also makes any past claims of 'a limited number of people' involved in the deception appear even more outrageous. Volkswagen would do well to immediately and completely disclose all people and products involved in this deception, no matter how far-reaching. Repairing the automaker's brand and regaining trust should be VW Group's highest priority at this point, but it can't begin until full and voluntary disclosure is achieved."

Request to suspend Keystone permit review may delay decision past 2016 election

By Kevin Rogers

The seven-year saga of the Keystone XL pipeline could drag on a bit longer now that TransCanada has asked the State Department to suspend its permit application, a delay that could extend past next year's presidential elections and into the next administration.

Environmentalists celebrated the news Monday evening about the long-stalled project, which has become one of the most visible battlegrounds for the nation's climate and energy debates.

But backers of the pipeline, which would carry Alberta's oil sands to Gulf Coast refineries, placed the blame squarely on the Obama administration.

President and CEO Russ Girling, in a letter to Secretary of State John Kerry, requested the suspension to allow the company to win approval of its preferred route through Nebraska. It filed with the Nebraska Public Service Commission in October, and the company expects that the process could take as long as a year.

"I note that when the status of the Nebraska pipeline route was challenged last year, the State Department found it appropriate to suspend its review until that dispute was resolved," Girling wrote. "We feel under the current circumstances a similar suspension would be appropriate."

The company is seeking a new route after legal challenges were filed against a 2013 route approval.

State Department spokesperson Pooja Jhunjhunwala said the department had received the letter and was reviewing it. In the meantime, she said, the permit review is ongoing.

TransCanada's move comes the same day that White House Press Secretary Josh Earnest told reporters that Obama plans to make a decision "before the end of his administration," noting that the decision could possibly come as early as this year.

Obama has consistently downplayed the potential economic impact of the pipeline and earlier this year used a rare veto to reject legislation to approve the project. He has also said he would only back the project "if it does not significantly exacerbate the problem of carbon pollution."

If TransCanada's request is approved, the suspension could potentially keep the project in limbo and out of Obama's hands. In that case, it would fall to his successor to make a final call.

Democratic candidates, including former Secretary of State Hillary Clinton, have vowed to block the project in the name of climate action. Most Republicans candidates across the board tout the project as a job creator, though businessman Donald Trump said last week said he would need a "better deal" from TransCanada to approve the project.

Environmental groups called TransCanada's suspension request a less-than-transparent ploy to pass the project on toward a potential Republican administration.

"This is nothing more than another desperate and cynical attempt by TransCanada to build their dirty pipeline someday if they get a climate denier in the White House in 2017," League of Conservation Voters Senior Vice President of Government Affairs Tiernan Sittenfeld said in a statement.

350.org founder Bill McKibben said TransCanada had admitted defeat on the project, and

was fighting in vain for a new "head official." He urged Obama to act decisively and finally reject the pipeline.

"Clearly TransCanada has lost and they recognize that," he said. "No matter what route TransCanada comes back with, the ultimate problem all along with Keystone XL has been that it's a climate disaster — that it fails the President's own climate test."

Pipeline supporters in the Senate slammed the Obama administration for its delays, saying they would have a "chilling effect" on future energy infrastructure projects.

"TransCanada had been given every reason to believe its application would be denied by the current administration, despite the protracted review period and multiple favorable findings," Sen. John Hoeven, R-N.D., said.

Hoeven earlier this year sponsored the Senate bill to approve the project. His Democratic counterpart, Sen. Heidi Heitkamp, D-N.D., accused the administration of allowing an infrastructure project to get caught up in heated climate debate.

"Year after year we have waited on this Administration to make a decision on the construction of the Keystone XL pipeline, and in that time have witnessed the conflation of a basic infrastructure expansion project into the foremost emotional and overly politicized issue as it relates to our country's energy policy," she said in a statement.

Senate Energy and Natural Resources Chairman Sen. Lisa Murkowski, R-Alaska, derided Obama for "arbitrary delays" that would drive other companies to "simply give up" on investing in the U.S.

But some liberals in the chamber sounded a celebratory note. In a statement, Sen. Brian Schatz, D-Hawaii, said he was pleased that the company had moved to suspend the "disastrous" project.

"If we are going to create a better future for our children, we must move away from fossil fuels like tar sands oil and toward renewable energy," he said.

Climate change features as Obama mocks Republicans on Broadway

By Josh Lederman

NEW YORK (AP) — Appearing on Broadway for one night only: Barack Obama, in a solo comedy act roasting the Republican Party.

The president left a crowd of more than 1,300 in stiches on Monday night at the Richard Rodgers Theatre, home to the hit musical "Hamilton" about Founding Father Alexander Hamilton. The cast staged a special performance for a Democratic National Committee fundraiser, with Obama as the encore.

Tweaking Republicans who question climate change, Obama likened it to having 99 out of 100 doctors tell someone they have diabetes and having that person brush it off as a conspiracy.

"All 99 of those doctors got together — with Obama — to try to prevent me from having bacon and doughnuts," Obama said to laughter in the ornate Times Square theater. "It'd be

funny — except this is about climate change. This was an analogy."

BMW enjoys luxury car boost, CEO defends diesel

By David McHugh

FRANKFURT, Germany (AP) — Automaker BMW beat expectations with a 20 percent increase in third quarter net profit from a year earlier, as the luxury automaker maintained rich profit margins despite slowing demand in China.

The company said Tuesday that demand in China appeared to be "stabilizing" after a slowdown in the economy, which is expected to keep a lid on profit increases for the rest of this year.

CEO Harald Krueger defended diesel engines as crucial to meeting carbon dioxide emissions goals in Europe. Diesels have come under a shadow recently because of the scandal over diesels built by competitor Volkswagen with engine software that enabled them to cheat on U.S. emissions tests.

"Without diesel it is not possible to meet the EU's ambitious goals for CO2 emissions," Krueger said in a conference call with journalists.

Whiskey fungus nuisance case against Diageo can move ahead

By The Associated Press

LOUISVILLE, Ky. (AP) — Some Kentucky residents who claim a whiskey warehouse is causing black fungus to grow on their homes have received a court's permission to press their lawsuit against liquor giant Diageo.

Diageo Americas Supply distills and ages whiskey at warehouses in Louisville, resulting in tons of ethanol emissions.

The lawsuit filed by Louisville residents claims those emissions are a nuisance because they cause a growth called whiskey fungus to form on nearby properties. Whiskey fungus thrives in ethanol-rich environments.

The plaintiffs want an injunction that would require Diageo to curb its ethanol emissions.

Amnesty: Shell cleanups of oil spills in Nigeria a cover-up

By The Associated Press

LAGOS, Nigeria (AP) — Amnesty International says oil giant Shell's claims of cleaning up spills that have destroyed the livelihoods of hundreds of thousands of Nigerians are "false."

A report issued Tuesday quotes one contractor as saying his clean-up was "a cover-up."

Shell Nigeria rejects the findings and says it is "committed to cleaning up all spills" including in Ogoniland, where community protests forced Shell out in 1993.

The report says one Ogoniland area still is blighted though Shell said it was cleaned up 40 years ago and again after a 2011 U.N. investigation found massive contamination.

Request to suspend Keystone permit review may delay decision past 2016 election

By Kevin Rogers

The seven-year saga of the Keystone XL pipeline could drag on a bit longer now that TransCanada has asked the State Department to suspend its permit application, a delay that could extend past next year's presidential elections and into the next administration.

Environmentalists celebrated the news Monday evening about the long-stalled project, which has become one of the most visible battlegrounds for the nation's climate and energy debates.

But backers of the pipeline, which would carry Alberta's oil sands to Gulf Coast refineries, placed the blame squarely on the Obama administration.

President and CEO Russ Girling, in a letter to Secretary of State John Kerry, requested the suspension to allow the company to win approval of its preferred route through Nebraska. It filed with the Nebraska Public Service Commission in October, and the company expects that the process could take as long as a year.

"I note that when the status of the Nebraska pipeline route was challenged last year, the State Department found it appropriate to suspend its review until that dispute was resolved," Girling wrote. "We feel under the current circumstances a similar suspension would be appropriate."

The company is seeking a new route after legal challenges were filed against a 2013 route approval.

State Department spokesperson Pooja Jhunjhunwala said the department had received the letter and was reviewing it. In the meantime, she said, the permit review is ongoing.

TransCanada's move comes the same day that White House Press Secretary Josh Earnest told reporters that Obama plans to make a decision "before the end of his administration," noting that the decision could possibly come as early as this year.

Obama has consistently downplayed the potential economic impact of the pipeline and earlier this year used a rare veto to reject legislation to approve the project. He has also said he would only back the project "if it does not significantly exacerbate the problem of carbon pollution."

If TransCanada's request is approved, the suspension could potentially keep the project in limbo and out of Obama's hands. In that case, it would fall to his successor to make a final call.

Democratic candidates, including former Secretary of State Hillary Clinton, have vowed to block the project in the name of climate action. Most Republicans candidates across the board tout the project as a job creator, though businessman Donald Trump said last week said he would need a "better deal" from TransCanada to approve the project.

Environmental groups called TransCanada's suspension request a less-than-transparent ploy to pass the project on toward a potential Republican administration.

"This is nothing more than another desperate and cynical attempt by TransCanada to build their dirty pipeline someday if they get a climate denier in the White House in 2017," League of Conservation Voters Senior Vice President of Government Affairs Tiernan Sittenfeld said in a statement.

350.org founder Bill McKibben said TransCanada had admitted defeat on the project, and

was fighting in vain for a new "head official." He urged Obama to act decisively and finally reject the pipeline.

"Clearly TransCanada has lost and they recognize that," he said. "No matter what route TransCanada comes back with, the ultimate problem all along with Keystone XL has been that it's a climate disaster — that it fails the President's own climate test."

Pipeline supporters in the Senate slammed the Obama administration for its delays, saying they would have a "chilling effect" on future energy infrastructure projects.

"TransCanada had been given every reason to believe its application would be denied by the current administration, despite the protracted review period and multiple favorable findings," Sen. John Hoeven, R-N.D., said.

Hoeven earlier this year sponsored the Senate bill to approve the project. His Democratic counterpart, Sen. Heidi Heitkamp, D-N.D., accused the administration of allowing an infrastructure project to get caught up in heated climate debate.

"Year after year we have waited on this Administration to make a decision on the construction of the Keystone XL pipeline, and in that time have witnessed the conflation of a basic infrastructure expansion project into the foremost emotional and overly politicized issue as it relates to our country's energy policy," she said in a statement.

Senate Energy and Natural Resources Chairman Sen. Lisa Murkowski, R-Alaska, derided Obama for "arbitrary delays" that would drive other companies to "simply give up" on investing in the U.S.

But some liberals in the chamber sounded a celebratory note. In a statement, Sen. Brian Schatz, D-Hawaii, said he was pleased that the company had moved to suspend the "disastrous" project.

"If we are going to create a better future for our children, we must move away from fossil fuels like tar sands oil and toward renewable energy," he said.

LOUISVILLE, Ky. (AP) — Some Kentucky residents who claim a whiskey warehouse is causing black fungus to grow on their homes have received a court's permission to press their lawsuit against liquor giant Diageo.

Diageo Americas Supply distills and ages whiskey at warehouses in Louisville, resulting in tons of ethanol emissions.

The lawsuit filed by Louisville residents claims those emissions are a nuisance because they cause a growth called whiskey fungus to form on nearby properties. Whiskey fungus thrives in ethanol-rich environments.

The plaintiffs want an injunction that would require Diageo to curb its ethanol emissions.

Amnesty: Shell cleanups of oil spills in Nigeria a cover-up

By The Associated Press

LAGOS, Nigeria (AP) — Amnesty International says oil giant Shell's claims of cleaning up spills that have destroyed the livelihoods of hundreds of thousands of Nigerians are "false."

A report issued Tuesday quotes one contractor as saying his clean-up was "a cover-up."

Shell Nigeria rejects the findings and says it is "committed to cleaning up all spills" including in Ogoniland, where community protests forced Shell out in 1993.

The report says one Ogoniland area still is blighted though Shell said it was cleaned up 40 years ago and again after a 2011 U.N. investigation found massive contamination.

Subject: RE: 2016 FE Guide - Errors in Verify as of 6AM on Oct 27, 2015; Audi A3 etron PHEV errors attached

Hi Dave;

Yesterday morning I had corrected both labels in Verify, but I have a couple of questions about your comments below.

One of the issues for the A3 e-tron ultra (index# 102) was that the CS gasoline unadjusted combined CO2 value does not appear on the V18 calculator as does both the city and highway values. These two values we calculate and enter into the V18 calculator. I must not have calculated correctly but when I tried to enter the correct value as you said, this correct 165.95 CO2 value would not be accepted by Verify because more than one place right of the decimal is not allowed. I guess we'll see if that goes through your audit spreadsheet.

The other thing I noticed was that for the A3 e-tron (index #101) was that the CD electricity fuel unadjusted value from the V18 calculator reads 29.5 kW-hr/100 miles and your audit spreadsheet doesn't do any rounding, so depending upon if you use the 22.9966 miles from the combined Rcda value (cell G14) which yields 29.5191 combined kW-hr/100 mile (the value in cell AN4 when displayed to three places is 29.519.) or if you use the value shown for the Rcda of 23.00 you get the 29.5148 rounded to 29.515 value you said I should input. Should we always submit this value to 3 places right of the decimal?

If you could run the audit of these two labels again this morning and if you have a few minutes to discuss the results I would like to talk with you.

Thanks,

Richard

Richard,

Re: 2016 FE Guide - Errors in Verify as of 6AM on Oct 27, 2015; Audi A3 etron PHEV errors attached

Attached are the data in Verify as of 6AM on Oct 27, 2015. The PHEV data is in a separate tab than the data for conventional vehicles. Labels with pea green fill in the first few columns have errors which need to be corrected before I can have the data posted on www.fueleconomy.gov. The errors are as follows:

A3 etron:

PHEV; Errors are highlighted in yellow fill with the correct values shown in the two rows below the cell where the error occurred; Error----CS driving range should be 367 (not 380) per v18 calculator; Error---charge depleting (CD) (fuel = electricity) unrounded adjusted city/hwy energy consumption values should be 41.7/39.1 kw-hr/100 mi (instead of 42/39) to agree with v18 calculator; Error---please revise CD (fuel = electricity) unrounded unadjusted city/hwy/comb MPGe values to 114.96/123.00/118.44 mpge (instead of 0/0/0) to agree with v18 calculator; Warning - number of battery packs exceed 4; please list battery packs, not cells; Error-- combined unadjusted FE more than 0.0001 difference from our calculation of 29.515.; Please revise Verify as needed.

A3 etron Ultra:

PHEV; Errors are highlighted in yellow fill with the correct values shown in the two rows below the cell where the error occurred; Error---CS driving range should be 412 (not 430) per v18 calculator; Error---please revise CD (fuel = electricity) unrounded unadjusted city/hwy/comb MPGe values to 122.52/123.63/123.02 mpge (instead of 0/0/0) to agree with v18 calculator; Error---please revise CD (fuel = electricity) unadjusted hwy mpge from 86.5 to 86.541 to agree with v18 calculator; Error please revise CS (fuel = gasoline) Unadjusted combined CO2 from 164.5 to 165.95 to agree with v18 calculator; Error please revise Battery Charge time (where fuel = electricity) from 2.5 to 3.7 hours; Warning - number

of battery packs exceed 4; please list battery packs, not cells; Please revise Verify as needed.

Please make any needed corrections to Verify when you get a chance and let me know when they have been corrected.

Thanks

Dave

Re: *Volkswagen 2.0L TDI Diesel Emissions Issue, VW Action Code 23Q2*

Office of the Administrator,

My wife and I own a 2012 Volkswagen (VW) Golf[1] TDI 'Clean Diesel' passenger car equipped with a EA189 2.0-liter diesel engine. Our vehicle is fitted with the 'Gen 1' emissions aftertreatment system[2] and uses a software defeat device to cheat on the results of NO_x emmissions testing, and thus violates the US Clean Air Act (CAA)[3]. We purchased this vehicle, brand-new, from Stohlman Automotive of Tysons Corner, VA on July 25, 2011. Our two children have been regular passengers in the automobile since their births in June 2012 and June 2014 respectively. We are obviously extremely troubled about the long-term health implications this vehicle will have upon our family and our community due to exposure to excessive amounts of harmful NO_x pollutants. We are also very concerned about the financial repercussions this vehicle will have upon our family[4].

We purchased this vehicle due to its numerous publicized attributes:

- it is a 'Clean Diesel', Tier 2 Bin 5/CA LEV II-compliant automobile (i.e., the automobile can be sold & driven in all 50 states)
- VW rated this vehicle @ 140 hp and 236 lbs./ft torque with 30 mpg city and 42 mpg highway; and claimed that real-world fuel economy tests *beat* EPA estimates[5]
- numerous automotive publications indicated that the car was a highly rated 'green vehicle' blending 'clean' emissions with good fuel economy[6]

[6] See *References - Ratings*

- our test drive of a similarly equipped 2011 VW Golf TDI Clean Diesel confirmed reviews from the automotive publications;
- having been in production for the three previous years, the 2012 VW Golf TDI was not based-upon a new & untested design

It is now mid-October of 2015, and nearly 500 days have passed since this emissions system fraud was first uncovered by West Virginia University[7]. VW is continuing with their song-and-dance' stalling tactics asking for customers to be patient and give VW time to engineer a solution. VW Group of America CEO Michael Horn said in congressional testimony October 8, 2015 that an engineering solution for 'Gen 1' vehicles, such as ours, would probably not be ready until late 2016. With 340,000+ 'Gen 1' vehicles affected and recall repairs requiring approximately 5-10 hours per vehicle our automobile would surely not be repaired until sometime in 2017. This time-frame is unreasonable. VW maliciously defrauded consumers and regulators; they should immediately remedy the situation and be severely punished.

Every component interconnected to the emissions system in our vehicle has been compromised. The 'post-resolution' attributes of the vehicle are completely nebulous - horsepower, torque, fuel economy, performance, maintenance requirements, reliability and warrantability are all unknown quantities! Therefore the acceptability of any proposed remedy from VW should be at the discretion of the owner of the vehicle; not by the government, and certainly not by VW. Only the owner of the vehicle can determine the acceptable level of risk they are willing to bear. It is absolutely unreasonable for vehicle owners to be expected to wait another 500+ days for VW to implement a fix AND then bear the full burden of risk on a hastily designed, unproven, minimally tested 'Frankenstein' solution. Why should we trust VW? We demand that VW:

- offer owners the opportunity for an immediate 'buy back' of the affected cars for the entire purchase price of the vehicle
- repair all environmental damages; pay all government-issued penalties
- repair all vehicles ensuring full compliance with all US emissions standards
- fairly compensate owners for all inconveniences incurred due to the misdirected & deceitful December 2014 voluntary recall
- fairly compensate owners for all reasonable damages

For years we have been deceived by VW and their 'Clean Diesel'. Please help us ensure that those found to be responsible are held accountable and that victims' rights are fully protected.

Sincerely,

Ex. 6

Ex. 6

[7] West Virginia University, *WVU study found elevated levels of emissions from Volkswagen vehicles.* <https://shar.es/1uCXbc>

Addendum

To add further insult to our problems with this car, this past weekend our VW reported a Check Engine Light (CEL) warning. Diagnosis from the Stohlman VW service department identified a CEL P046C[8] code - a faulty Exhaust Gas Recirculation (EGR) valve - an approximate $900 repair. The EGR valve is a critical component in the 'Gen 1' diesel emissions aftertreatment system. We spoke to VW Customer Care (VW Customer Care Case # Ex. 6 suggesting that it is absurd that we pay one penny to repair a system is faulty due to defects in material design & workmanship. VW's response was that the emissions system is out-of-warranty and that there was nothing that they could do. We are being unfairly penalized for VW's criminal engineering and belated solutions.

Coincidentally, we have also recently been notified of NHTSA recall 15V483 (Steering Wheel Clock Spring) which may prevent the airbag on our 2012 VW Golf TDI from deploying in the event of a vehicle crash, *for which there is no repair solution available*. Can you see the long lines of dealers and people wanting to buy or trade for our vehicle?

GOP advances water rule block, earning prompt veto threat

By Kevin Rogers

Senate Republicans used a Congressional Review Act resolution to get around Democratic objections Tuesday and took a step toward blocking the Obama administration's Clean Water Rule — a maneuver that drew an immediate veto threat.

The resolution of disapproval, introduced by Sen. Joni Ernst, R-Iowa, was one of two Senate attempts to roll back the Environmental Protection Agency's rule clarifying what bodies are

protected under the Clean Water Act.

First, Democrats blocked cloture on a bill sponsored by Sen. John Barrasso, R-Wyo. But, unlike a bill, which requires 60 votes to advance to amendments and debate, a CRA resolution can move to debate with a simple majority. Ernst's resolution advanced by a vote of 55-43. The Senate will have up to 10 hours to debate the measure before proceeding with a final up-or-down vote.

The Office of Management and Budget quickly issued a Statement of Administration Policy condemning the resolution.

"If enacted, S.J.Res. 22 would nullify years of work and deny businesses and communities the regulatory certainty needed to invest in projects that rely on clean water," OMB said. "Simply put, S.J.Res. 22 is not an act of good governance. It would sow confusion and invite conflict at a time when our communities and businesses need clarity and certainty around clean water regulation."

And while the CRA resolution only requires a simple majority to win final approval in the Senate, Republicans would face an uphill climb to win the 67 votes required to override the veto.

The White House had already threatened to veto Barrasso's bill, which would have required EPA and the Army Corps of Engineers to restart the rulemaking process with a set of specific guidelines. But Democrats managed to stop its advance by defeating cloture 57-41.

Interest groups on both sides of the debate had said they would hold senators accountable for their vote on Barrasso's bill. The League of Conservation Voters warned that a vote for the bill would count against lawmakers on its National Environmental Scorecard. The Chamber of Commerce, meanwhile, urged lawmakers to support the measure as a key vote on its How They Voted scorecard.

Prior to the pair of votes, Senate Minority Leader Sen. Harry Reid, D-Nev., painted the Republican efforts as a futile waste of lawmakers' time, and warned that Republicans would suffer the same fate as they look to overturn EPA's Clean Power Plan in the coming weeks.

"This is just the first of a series of environmental attacks we expect this month from Republicans. They are also preparing to nullify the President's rules to address climate change," he said. "Republicans have no solutions. They have no plan to keep our water clean or address climate change. They're just wasting valuable Senate time on these show votes."

Senate Republicans, with some Democratic support, have introduced a pair of CRA resolutions aimed at overturning the rules for new and existing power plants, published in the Federal Register last month. While the resolutions will likely have the support to advance in the Senate, they would face the same battle to win enough support to override a veto.

Ahead of Tuesday's votes, Senate Majority Leader Mitch McConnell, R-Ky., called the water

rule "a cynical and overbearing power grab dressed awkwardly as some clean-water measure" and said senators should be "standing up for the middle class instead of defending cynical, job-crushing regulations."

Barrasso said that the Clean Water Rule, which was placed under a nationwide legal stay last month, was a "poster child of EPA overreach," that needed to be scrapped immediately.

"The courts have already started weighing in on their concerns and have stayed the rule nationally," he said. "There's a great legal uncertainty about whether this Waters of the United States rule will survive these legal challenges."

Supporters of the rule, however, said that the rule will pass muster with the courts.

"This is a step backward," Sen. Barbara Boxer, D-Calif., said. "I hope we'll reject this and we can move on and let this Clean Water Rule work its way through the courts and become the law of the land."

Some members of the Democratic caucus who voted against Barrasso's bill and the resolution are mounting their own efforts to revise the final rule.

Sen. Angus King, I-Maine, said the rule needed EPA revisions to make it less confusing for landowners, but said Barrasso's bill went too far.

"While Maine's farmers shouldn't have to hire a lawyer and a soil scientist just to build an irrigation ditch, my concern is that this bill goes too far – it's the legislative equivalent of using a sledgehammer to crack a walnut," he said in a statement.

King, joined by Sens. Tim Kaine, D-Va., and Bill Nelson, D-Fla., sent a letter to EPA Administrator Gina McCarthy calling for the agency to update its guidance to make the rule easier to implement.

Obama will still make Keystone decision: Earnest

By Rob Gillies

TORONTO (AP) — The head of the company behind the Keystone XL pipeline denied Tuesday that political motivation was behind its decision to ask the U.S. government to delay consideration of the project.

The request by TransCanada to suspend its review of the Keystone XL pipeline could delay any decision until the next president takes office — potentially leaving the fate of the controversial project in the hands of a more supportive Republican administration.

TransCanada said Monday it had asked the State Department to suspend its review of the Alberta-to-Texas pipeline, citing uncertainties about the route it would take through Nebraska.

The request comes as many anticipate President Barack Obama will reject the project. If the

U.S. agrees to the suspension — which is not assured — that would leave the decision in the hands of the next president. While Democratic candidates, including front-runner Hillary Rodham Clinton, oppose the project, Republican candidates support it.

Q&A: Nebraska lands again at center of Keystone XL debate

By Grant Schulte

LINCOLN, Neb. (AP) — Nebraska is again at the center of the political debate over the Keystone XL pipeline as the company behind the project asks the State Department to pause its review of the proposal while TransCanada works with state officials to secure its preferred route.

The request marks the latest turn in the long-running battle between well-organized Nebraska landowners who oppose the pipeline and its developer.

Germany's VW: New C02 problems with 800,000 vehicles

By David Rising

BERLIN (AP) — Germany's Volkswagen, already reeling from news that it had cheated on U.S. tests for nitrogen oxide emissions, said Tuesday that an internal investigation had revealed "unexplained inconsistencies" in the carbon dioxide emissions from 800,000 vehicles that could cost the company another 2 billion euros ($2.2 billion).

The investigation was undertaken by the company after the revelations that many of its vehicles had software that allowed them to deceive U.S. nitrogen oxide tests. CEO Matthias Mueller promised Tuesday that Volkswagen "will relentlessly and completely clarify what has happened."

"It is a painful process, but for us there is no alternative," said Mueller, who took over after CEO Martin Winterkorn resigned in September because of the emissions-rigging scandal. "For us, only one thing counts, and that is the truth."

The news is the latest in a string of problems identified with Volkswagen emissions, which have caused share prices to plummet.

As scientists worry about warming world, US public doesn't

By Seth Borenstein

WASHINGTON (AP) — Americans are hot but not too bothered by global warming.

Most Americans know the climate is changing, but they say they are just not that worried about it, according to a new poll by The Associated Press-NORC Center for Public Affairs Research. And that is keeping the American public from demanding and getting the changes that are necessary to prevent global warming from reaching a crisis, according to climate and social scientists.

As top-level international negotiations to try to limit greenhouse gas emissions start later this month in Paris, the AP-NORC poll taken in mid-October shows about two out of three Americans accept global warming and the vast majority of those say human activities are at least part of the cause.

However, fewer than one in four Americans are extremely or very worried about it, according the poll of 1,058 people. About one out of three Americans are moderately worried and the highest percentage of those polled — 38 percent — were not too worried or not at all worried.

UN food security expert warns about impact of climate change

By The Associated Press

GENEVA (AP) — A U.N. expert is warning that more extreme weather, higher temperatures, floods, droughts and rising sea levels linked to climate change are threatening people's access to food over the long term.

Hilal Elver, the U.N. special rapporteur on "the right to food," predicts the negative impact from climate change on agriculture could subject another 600 million people to malnutrition by 2080.

In a statement on Tuesday before a U.N. climate conference in Paris starting Nov. 30, she recommended a shift from large-scale, industrial agriculture to "agro-ecology" that supports the local food movement, small-scale farmers and the environment.

Most climate scientists say the climate is changing largely because of the buildup of heat-trapping gases from the burning of coal, oil and gas. Some public officials and a few climate scientists disagree.

Shell defends BG deal in time of low oil prices

By Danica Kirka

LONDON (AP) — Royal Dutch Shell outlined Tuesday its strategy for making its merger with BG profitable in a world with falling oil prices, revealing another $1 billion in cost savings from the deal.

Chief Executive Officer Ben van Beurden said cost savings for the deal are now expected to be $2 billion, bringing total synergies to $3.5 billion in 2018. Examples include savings on corporate costs such as real estate.

"The $1 billion increase is in operating cost synergies and has arisen from both de-risking our original assumptions but also from identifying further opportunities," he told reporters on a conference call. "Plans also call for $1.5 billion of synergies for the combined exploration portfolio in 2018."

Shell agreed to buy British rival BG Group for 47 billion pounds ($69.7 billion) in April, in a deal widely seen as an effort by the energy company to adapt to lower prices. The deal will boost Shell's oil and gas reserves by 25 percent and give it a bigger presence in the fast-growing liquefied natural gas market.

More

Amnesty: Shell has not cleaned up oil spills in Nigeria

By Michelle Faul

LAGOS, Nigeria (AP) — Oil giant Shell is "blatantly false" when it claims it is cleaning up spills that continue to destroy the livelihoods of hundreds of thousands of Nigerians, Amnesty International said Tuesday.

A new report quotes one contractor as saying his clean-up was "a cover-up" that involved simply turning over earth to let spilled oil dry for a few days, then returning the still-contaminated soil to the ground.

Shell Nigeria rejected Amnesty's charges and said it remains "committed to cleaning up all spills" including in Ogoniland, where community protests forced Shell out in 1993. Shell still has pipelines carrying oil in that part of Nigeria's southern Niger Delta.

Oil pollution that poisons fishing creeks, mangrove swamps and farmlands along with people's livelihoods and health is a decades-old scandal in Nigeria, where endemic corruption has allowed only an elite few to benefit from oil.

GOP advances water rule block, earning prompt veto threat

By Kevin Rogers

Senate Republicans used a Congressional Review Act resolution to get around Democratic objections Tuesday and took a step toward blocking the Obama administration's Clean Water Rule — a maneuver that drew an immediate veto threat.

The resolution of disapproval, introduced by Sen. Joni Ernst, R-Iowa, was one of two Senate attempts to roll back the Environmental Protection Agency's rule clarifying what bodies are

protected under the Clean Water Act.

First, Democrats blocked cloture on a bill sponsored by Sen. John Barrasso, R-Wyo. But, unlike a bill, which requires 60 votes to advance to amendments and debate, a CRA resolution can move to debate with a simple majority. Ernst's resolution advanced by a vote of 55-43. The Senate will have up to 10 hours to debate the measure before proceeding with a final up-or-down vote.

The Office of Management and Budget quickly issued a Statement of Administration Policy condemning the resolution.

"If enacted, S.J.Res. 22 would nullify years of work and deny businesses and communities the regulatory certainty needed to invest in projects that rely on clean water," OMB said. "Simply put, S.J.Res. 22 is not an act of good governance. It would sow confusion and invite conflict at a time when our communities and businesses need clarity and certainty around clean water regulation."

And while the CRA resolution only requires a simple majority to win final approval in the Senate, Republicans would face an uphill climb to win the 67 votes required to override the veto.

The White House had already threatened to veto Barrasso's bill, which would have required EPA and the Army Corps of Engineers to restart the rulemaking process with a set of specific guidelines. But Democrats managed to stop its advance by defeating cloture 57-41.

Interest groups on both sides of the debate had said they would hold senators accountable for their vote on Barrasso's bill. The League of Conservation Voters warned that a vote for the bill would count against lawmakers on its National Environmental Scorecard. The Chamber of Commerce, meanwhile, urged lawmakers to support the measure as a key vote on its How They Voted scorecard.

Prior to the pair of votes, Senate Minority Leader Sen. Harry Reid, D-Nev., painted the Republican efforts as a futile waste of lawmakers' time, and warned that Republicans would suffer the same fate as they look to overturn EPA's Clean Power Plan in the coming weeks.

"This is just the first of a series of environmental attacks we expect this month from Republicans. They are also preparing to nullify the President's rules to address climate change," he said. "Republicans have no solutions. They have no plan to keep our water clean or address climate change. They're just wasting valuable Senate time on these show votes."

Senate Republicans, with some Democratic support, have introduced a pair of CRA resolutions aimed at overturning the rules for new and existing power plants, published in the Federal Register last month. While the resolutions will likely have the support to advance in the Senate, they would face the same hurdle to win enough support to override a veto.

Ahead of Tuesday's votes, Senate Majority Leader Mitch McConnell, R-Ky., called the water

rule "a cynical and overbearing power grab dressed awkwardly as some clean-water measure" and said senators should be "standing up for the middle class instead of defending cynical, job-crushing regulations."

Barrasso said that the Clean Water Rule, which was placed under a nationwide legal stay last month, was a "poster child of EPA overreach," that needed to be scrapped immediately.

"The courts have already started weighing in on their concerns and have stayed the rule nationally," he said. "There's a great legal uncertainty about whether this Waters of the United States rule will survive these legal challenges."

Supporters of the rule, however, said that the rule will pass muster with the courts.

"This is a step backward," Sen. Barbara Boxer, D-Calif., said. "I hope we'll reject this and we can move on and let this Clean Water Rule work its way through the courts and become the law of the land."

Some members of the Democratic caucus who voted against Barrasso's bill and the resolution are mounting their own efforts to revise the final rule.

Sen. Angus King, I-Maine, said the rule needed EPA revisions to make it less confusing for landowners, but said Barrasso's bill went too far.

"While Maine's farmers shouldn't have to hire a lawyer and a soil scientist just to build an irrigation ditch, my concern is that this bill goes too far. It's the legislative equivalent of using a sledgehammer to crack a walnut," he said in a statement.

King, joined by Sens. Tim Kaine, D-Va., and Bill Nelson, D-Fla., sent a letter to EPA Administrator Gina McCarthy calling for the agency to update its guidance to make the rule easier to implement.

Obama will still make Keystone decision: Earnest

By Rob Gillies

TORONTO (AP) — The head of the company behind the Keystone XL pipeline denied Tuesday that political motivation was behind its decision to ask the U.S. government to delay consideration of the project.

The request by TransCanada to suspend its review of the Keystone XL pipeline could delay any decision until the next president takes office — potentially leaving the fate of the controversial project in the hands of a more supportive Republican administration.

TransCanada said Monday it had asked the State Department to suspend its review of the Alberta-to-Texas pipeline, citing uncertainties about the route it would take through Nebraska.

The request comes as many anticipate President Barack Obama will reject the project. If the

U.S. agrees to the suspension — which is not assured — that would leave the decision in the hands of the next president. While Democratic candidates, including front-runner Hillary Rodham Clinton, oppose the project, Republican candidates support it.

Germany's VW: New C02 problems with 800,000 vehicles

By David Rising

BERLIN (AP) — Germany's Volkswagen, already reeling from news that it had cheated on U.S. tests for nitrogen oxide emissions, said Tuesday that an internal investigation had revealed "unexplained inconsistencies" in the carbon dioxide emissions from 800,000 vehicles that could cost the company another 2 billion euros ($2.2 billion).

The investigation was undertaken by the company after the revelations that many of its vehicles had software that allowed them to deceive U.S. nitrogen oxide tests. CEO Matthias Mueller promised Tuesday that Volkswagen "will relentlessly and completely clarify what has happened."

"It is a painful process, but for us there is no alternative," said Mueller, who took over after CEO Martin Winterkorn resigned in September because of the emissions-rigging scandal. "For us, only one thing counts, and that is the truth."

The news is the latest in a string of problems identified with Volkswagen emissions, which have caused share prices to plummet.

As scientists worry about warming world, US public doesn't

By Seth Borenstein

WASHINGTON (AP) — Americans are hot but not too bothered by global warming.

Most Americans know the climate is changing, but they say they are just not that worried about it, according to a new poll by The Associated Press-NORC Center for Public Affairs Research. And that is keeping the American public from demanding and getting the changes that are necessary to prevent global warming from reaching a crisis, according to climate and social scientists.

As top-level international negotiations to try to limit greenhouse gas emissions start later this month in Paris, the AP-NORC poll taken in mid-October shows about two out of three Americans accept global warming and the vast majority of those say human activities are at least part of the cause.

However, fewer than one in four Americans are extremely or very worried about it, according the poll of 1,058 people. About one out of three Americans are moderately worried and the highest percentage of those polled — 38 percent — were not too worried or not at all worried.

UN food security expert warns about impact of climate change

By The Associated Press

GENEVA (AP) — A U.N. expert is warning that more extreme weather, higher temperatures, floods, droughts and rising sea levels linked to climate change are threatening people's access to food over the long term.

Hilal Elver, the U.N. special rapporteur on "the right to food," predicts the negative impact from climate change on agriculture could subject another 600 million people to malnutrition by 2080.

In a statement on Tuesday before a U.N. climate conference in Paris starting Nov. 30, she recommended a shift from large-scale, industrial agriculture to "agro-ecology" that supports the local food movement, small-scale farmers and the environment.

Most climate scientists say the climate is changing largely because of the buildup of heat-trapping gases from the burning of coal, oil and gas. Some public officials and a few climate scientists disagree.

Shell defends BG deal in time of low oil prices

By Danica Kirka

LONDON (AP) — Royal Dutch Shell outlined Tuesday its strategy for making its merger with BG profitable in a world with falling oil prices, revealing another $1 billion in cost savings from the deal.

Chief Executive Officer Ben van Beurden said cost savings for the deal are now expected to be $2 billion, bringing total synergies to $3.5 billion in 2018. Examples include savings on corporate costs such as real estate.

"The $1 billion increase is in operating cost synergies and has arisen from both de-risking our original assumptions but also from identifying further opportunities," he told reporters on a conference call. "Plans also call for $1.5 billion of synergies for the combined exploration portfolio in 2018."

Shell agreed to buy British rival BG Group for 47 billion pounds ($69.7 billion) in April, in a deal widely seen as an effort by the energy company to adapt to lower prices. The deal will boost Shell's oil and gas reserves by 25 percent and give it a bigger presence in the fast-growing liquefied natural gas market.

Amnesty: Shell has not cleaned up oil spills in Nigeria

By Michelle Faul

LAGOS, Nigeria (AP) — Oil giant Shell is "blatantly false" when it claims it is cleaning up spills that continue to destroy the livelihoods of hundreds of thousands of Nigerians, Amnesty International said Tuesday.

A new report quotes one contractor as saying his clean-up was "a cover-up" that involved simply turning over earth to let spilled oil dry for a few days, then returning the still-contaminated soil to the ground.

Shell Nigeria rejected Amnesty's charges and said it remains "committed to cleaning up all spills" including in Ogoniland, where community protests forced Shell out in 1993. Shell still has pipelines carrying oil in that part of Nigeria's southern Niger Delta.

Oil pollution that poisons fishing creeks, mangrove swamps and farmlands along with people's livelihoods and health is a decades-old scandal in Nigeria, where endemic corruption has allowed only an elite few to benefit from oil.

GOP advances water rule block, earning prompt veto threat

By Kevin Rogers

Senate Republicans used a Congressional Review Act resolution to get around Democratic objections Tuesday and took a step toward blocking the Obama administration's Clean Water Rule — a maneuver that drew an immediate veto threat.

The resolution of disapproval, introduced by Sen. Joni Ernst, R-Iowa, was one of two Senate attempts to roll back the Environmental Protection Agency's rule clarifying what bodies are

protected under the Clean Water Act.

First, Democrats blocked cloture on a bill sponsored by Sen. John Barrasso, R-Wyo. But, unlike a bill, which requires 60 votes to advance to amendments and debate, a CRA resolution can move to debate with a simple majority. Ernst's resolution advanced by a vote of 55-43. The Senate will have up to 10 hours to debate the measure before proceeding with a final up-or-down vote.

The Office of Management and Budget quickly issued a Statement of Administration Policy condemning the resolution.

"If enacted, S.J.Res. 22 would nullify years of work and deny businesses and communities the regulatory certainty needed to invest in projects that rely on clean water," OMB said. "Simply put, S.J.Res. 22 is not an act of good governance. It would sow confusion and invite conflict at a time when our communities and businesses need clarity and certainty around clean water regulation."

And while the CRA resolution only requires a simple majority to win final approval in the Senate, Republicans would face an uphill climb to win the 67 votes required to override the veto.

The White House had already threatened to veto Barrasso's bill, which would have required EPA and the Army Corps of Engineers to restart the rulemaking process with a set of specific guidelines. But Democrats managed to stop its advance by defeating cloture 57-41.

Interest groups on both sides of the debate had said they would hold senators accountable for their vote on Barrasso's bill. The League of Conservation Voters warned that a vote for the bill would count against lawmakers on its National Environmental Scorecard. The Chamber of Commerce, meanwhile, urged lawmakers to support the measure as a key vote on its How They Voted scorecard.

Prior to the pair of votes, Senate Minority Leader Sen. Harry Reid, D-Nev., painted the Republican efforts as a futile waste of lawmakers' time, and warned that Republicans would suffer the same fate as they look to overturn EPA's Clean Power Plan in the coming weeks.

"This is just the first of a series of environmental attacks we expect this month from Republicans. They are also preparing to nullify the President's rules to address climate change," he said. "Republicans have no solutions. They have no plan to keep our water clean or address climate change. They're just wasting valuable Senate time on these show votes."

Senate Republicans, with some Democratic support, have introduced a pair of CRA resolutions aimed at overturning the rules for new and existing power plants, published in the Federal Register last month. While the resolutions will likely have the support to advance in the Senate, they would face the same battle to win enough support to override a veto.

Ahead of Tuesday's votes, Senate Majority Leader Mitch McConnell, R-Ky., called the water

rule "a cynical and overbearing power grab dressed awkwardly as some clean-water measure" and said senators should be "standing up for the middle class instead of defending cynical, job-crushing regulations."

Barrasso said that the Clean Water Rule, which was placed under a nationwide legal stay last month, was a "poster child of EPA overreach," that needed to be scrapped immediately.

"The courts have already started weighing in on their concerns and have stayed the rule nationally," he said. "There's a great legal uncertainty about whether this Waters of the United States rule will survive these legal challenges."

Supporters of the rule, however, said that the rule will pass muster with the courts.

"This is a step backward," Sen. Barbara Boxer, D-Calif., said. "I hope we'll reject this and we can move on and let this Clean Water Rule work its way through the courts and become the law of the land."

Some members of the Democratic caucus who voted against Barrasso's bill and the resolution are mounting their own efforts to revise the final rule.

Sen. Angus King, I-Maine, said the rule needed EPA revisions to make it less confusing for landowners, but said Barrasso's bill went too far.

"While Maine's farmers shouldn't have to hire a lawyer and a soil scientist just to build an irrigation ditch, my concern is that this bill goes too far. It's the legislative equivalent of using a sledgehammer to crack a walnut," he said in a statement.

King, joined by Sens. Tim Kaine, D-Va., and Bill Nelson, D-Fla., sent a letter to EPA Administrator Gina McCarthy calling for the agency to update its guidance to make the rule easier to implement.

As scientists worry about warming world, US public doesn't

By Seth Borenstein

WASHINGTON (AP) — Americans are hot but not too bothered by global warming.

Most Americans know the climate is changing, but they say they are just not that worried about it, according to a new poll by The Associated Press-NORC Center for Public Affairs Research. And that is keeping the American public from demanding and getting the changes that are necessary to prevent global warming from reaching a crisis, according to climate and social scientists.

As top-level international negotiations to try to limit greenhouse gas emissions start later this month in Paris, the AP-NORC poll taken in mid-October shows about two out of three Americans accept global warming and the vast majority of those say human activities are at least part of the cause.

However, fewer than one in four Americans are extremely or very worried about it, according the poll of 1,058 people. About one out of three Americans are moderately worried and the highest percentage of those polled — 38 percent — were not too worried or not at all worried.

UN food security expert warns about impact of climate change

By The Associated Press

GENEVA (AP) — A U.N. expert is warning that more extreme weather, higher temperatures, floods, droughts and rising sea levels linked to climate change are threatening people's access to food over the long term.

Hilal Elver, the U.N. special rapporteur on "the right to food," predicts the negative impact from climate change on agriculture could subject another 600 million people to malnutrition by 2080.

In a statement on Tuesday before a U.N. climate conference in Paris starting Nov. 30, she recommended a shift from large-scale, industrial agriculture to "agro-ecology" that supports the local food movement, small-scale farmers and the environment.

Most climate scientists say the climate is changing largely because of the buildup of heat-trapping gases from the burning of coal, oil and gas. Some public officials and a few climate scientists disagree.

Shell defends BG deal in time of low oil prices

By Danica Kirka

LONDON (AP) — Royal Dutch Shell outlined Tuesday its strategy for making its merger with BG profitable in a world with falling oil prices, revealing another $1 billion in cost savings from the deal.

Chief Executive Officer Ben van Beurden said cost savings for the deal are now expected to be $2 billion, bringing total synergies to $3.5 billion in 2018. Examples include savings on corporate costs such as real estate.

"The $1 billion increase is in operating cost synergies and has arisen from both de-risking our original assumptions but also from identifying further opportunities," he told reporters on a conference call. "Plans also call for $1.5 billion of synergies for the combined exploration portfolio in 2018."

Shell agreed to buy British rival BG Group for 47 billion pounds ($69.7 billion) in April, in a deal widely seen as an effort by the energy company to adapt to lower prices. The deal will boost Shell's oil and gas reserves by 25 percent and give it a bigger presence in the fast-growing liquefied natural gas market.

Amnesty: Shell has not cleaned up oil spills in Nigeria

By Michelle Faul

LAGOS, Nigeria (AP) — Oil giant Shell is "blatantly false" when it claims it is cleaning up spills that continue to destroy the livelihoods of hundreds of thousands of Nigerians, Amnesty International said Tuesday.

A new report quotes one contractor as saying his clean-up was "a cover-up" that involved simply turning over earth to let spilled oil dry for a few days, then returning the still-contaminated soil to the ground.

Shell Nigeria rejected Amnesty's charges and said it remains "committed to cleaning up all spills" including in Ogoniland, where community protests forced Shell out in 1993. Shell still has pipelines carrying oil in that part of Nigeria's southern Niger Delta.

Oil pollution that poisons fishing creeks, mangrove swamps and farmlands along with people's livelihoods and health is a decades-old scandal in Nigeria, where endemic corruption has allowed only an elite few to benefit from oil.

Sent: Wed 11/4/2015 4:13:31 AM
Subject: Re: VW issue

Dear Mr Zinke:

Thank you very much for your kind note. You will find more information about the second notice of violation issued by EPA here:

http://www3.epa.gov/otaq/cert/violations.htm

We include on this website a copy of the notice, which has a general description of what our testing revealed with the 6 cylinder engines. I note that testing done by our partners in California and Environment Canada showed consistent results with these engines.

Unfortunately, we are unable to share these test results with KBA, or further details about our ongoing work with you at this time, as they are evidence in an ongoing enforcement matter.

Sincerely,

Christopher Grundler, Director
Office of Transportation and Air Quality
U.S. Environmental Protection Agency
202.564.1682 (Washington)
734.214.4207 (Ann Arbor)
www.epa.gov/otaq

On Nov 3, 2015, at 2:50 PM, "Ekhard.Zinke@kba.de" <Ekhard.Zinke@kba.de> wrote:

> Dear Mr. Grundler,
>
> first of all I´d like to express my personal appreciation for the friendly reception we had received during the visit of the federal German delegation under the lead of the German Minister of Transportation at the EPA just last week. I regard the experienced open – minded atmosphere of dialogue as a very constructive step towards a closer cooperation between our institutions mainly in the course of handling the "VW Issue" on either side of the Atlantic.
>
> Our investigations concerning VW and as mentioned on other diesel market participants in Germany are ongoing on a very intense level, mainly including a variety of dynometer and also on-road test procedures, both as varieties on the European NEFC and future RDE requirements. So far roughly 2/3rd of the designated test "participants" have been tested with

and without PEMs. So far I do regard the test results only as raw data which still have to be analyzed and scienetifically evaluated in a rather sophisticated process. Thus it is far to soon right now to speak of actually validated results.

Just of this morning the media over here has reported on new allegations towards VW on grounds of additional violations against the Clean Air Act. Referring to your most recent news release VW, AUDI and PORSCHE have unlawfully deployed software in their 3,0 l diesel engines by means of installing a non-described defeat device.

As you can imagine, we are highly interested in further details concerning the data basis, test environments and so forth. Even more so, since according to our test "results" with an AUDI A6, 3,0 l diesel, this engine seems to comply fully with the European emission standards.

If it would be convenient with you, I´d like to start a more thorough technical-oriented dialogue on this new aspect of the VW issue with you and your institution. Since I´m personally just being a lawyer and an engineer-illiterate so to speak, I´d like to propose that maybe one of my very experienced staff engineers, Mr. Frank Wrobel (Frank.Wrobel@kba.de), head of my Conformity Testing Department, will get in touch with you or one of your staff members. Therefore I´d be very pleased to receive a name of a contact person/ address and already thank you for your kind support.

Let´s keep in touch!

With kind regards

Ekhard Zinke

Bryon/Bill,

Stern Magazine wants to publish a story about the VW scandal in their year-end edition (see emails below). As part of this, they will be coming to Ann Arbor to interview me.

One of their requests was,

"Can you show me the equipment which is necessary to measure the emissions?"

I explained that ICCT doesn't have such equipment (contracted with WVU) and we rented the Jetta in CA, so no access to the vehicle, either. Instead, I suggested that they might want to visit the EPA lab. They thought this was a good idea.

I have no idea if you want to - or even can - talk to Stern magazine about the VW stuff. But even if you can't, I suspect Stern would be interested in the basic process that EPA/CARB follow when investigating any allegation of high emissions and/or defeat devices, completely independent of what EPA did or is doing for this specific case. And from their question, they would certainly be interested in seeing a PEMS unit and maybe having a demonstration of how it works.

Let me know if EPA might be interested and, if so, how this might be arranged. Date isn't set yet, but is supposed to be sometime in Nov.

Oh, and if this can be worked out, Swiss Radio Television is planning a one-hour documentary on the VW scandal. They want me to go to WVU to do the interview at their lab, but I don't have time for this. So, they will likely be coming to Ann Arbor sometime between Dec. 3 and Dec. 6 and might be interested in seeing the EPA lab.

John

734-355-1055

P.S. I want you to know that every time I talk to a reporter I tell them that ICCT just found the high emissions and our testing wasn't structured to identify the cause of the high emissions, so we turned the data and report over to EPA and CARB to let the experts figure out what was going on. I'm actually embarrassed to be getting so much publicity and credit for what was just a routine test program.

Begin forwarded message:

The problem with meeting in Ann Arbor is that I work from home most of the time. So, the only thing in Ann Arbor is my office (in my 3rd story attic) and my garage full of car parts. You are welcome to come if you want (although my wife might have a heart attack).

It might be possible to arrange to meet at the EPA lab in Ann Arbor.

My official office is in DC and I am required to go there one week a month. We could meet there

right after Thanksgiving, or possibly the week before. Although it is just an office complex.

ICCT is an organization driven by data and analyses. But we are a small organization (about 40 people in offices in San Francisco, DC, and Berlin) and we don't have any testing equipment of our own. PEMS (portable emission control system) units are about a half million dollars each and we don't own one. Thus, we contracted with West Virginia University to do the testing for us. And we rented vehicles - in California - for the testing, so we don't have access to them either. We do have pictures of the PEMS unit in the truck of the different vehicles.

Dear John,

I talked to my editor in chief and we want to publish your story in our year-end edition. It is a special edition of stern-Magazine in which we look back into the year 2015 and recall the most important stories.

One of the stories is for sure the VW-diesel scandal.

For me as a reporter it is important to meet you in person.

Maybe it is possible that we can sit down for an interview in your office or at your workplace at home.

Maybe it is possible that you can show me a little bit around at the ICCT.

Is the VW-Passat which was the first test-car still there? Can you show me the equipment which is necessary to measure the emissions?

The focus of the story is: How you at icct discovered the truth.

So it would be really a great opportunity if I can meet you in Ann Arbor. **Any date in November will work for me**. Just let me know, I'll be there.

Looking forward to meet you

Sincerely

Norbert

18 states formally seek to join legal defense of Clean Power Plan

By Kevin Rogers

A coalition of state and local governments told a federal appeals court Wednesday that they have "a compelling interest" in the success of the Obama administration's rule limiting carbon emissions from existing power plants, and sought permission join the legal battle against states who want the rule thrown out.

The motion to intervene if approved by the U.S. Court of Appeals for the District of

Columbia Circuit, would put the group of 18 states, six cities and one county – led by New York State – on a collision course with the group of 26 states – led by West Virginia – that is trying to kill the Clean Power Plan.

On a call with reporters, New York Attorney General Eric Schneiderman said that EPA's rule is "firmly grounded in science and the law" and is necessary to press other states to get moving on efforts to limit climate-warming emissions.

"What it does is set standards for all states to ensure that some states aren't working hard to reduce carbon emissions only to have it come in from across the borders," he said. "The EPA plan takes all existing, successful technologies – this is not based on technologies that do not already exist – and makes sure every state steps up to the plate and does its fair share."

The motion says the states and municipalities "have unique sovereign interests in limiting climate change pollution in order to prevent and mitigate loss and damage to publicly-owned coastal property, to protect public infrastructure, and to limit emergency response costs borne by the public."

In addition to New York, the states filing the motion include California, Connecticut, Delaware, Hawaii, Illinois, Iowa, Maine, Maryland, Massachusetts, Minnesota, New Hampshire, New Mexico, Oregon, Rhode Island, Vermont, Virginia and Washington. They were also joined by the District of Columbia and the cities of New York, Chicago, Philadelphia and Boulder, Colorado, as well as South Miami and Broward County in Florida.

They are seeking to join the Environmental Protection Agency and a coalition of environmental groups who are defending the Clean Power Plan against 26 states, in addition to dozens of companies and industry groups.

West Virginia Attorney General Patrick Morrisey in a statement said that the rules deserved a robust challenge and he touted the wide coalition opposed to the regulations.

"A growing national coalition of mineworkers, boilermakers, operators, utilities, businesses, Democrats, Republicans, Independents and consumer groups agree: the EPA lacks the authority to transform itself from an environmental regulator into a central energy planning authority," he said. "If the EPA succeeds in this unprecedented and illegal power grab, many jobs will be lost, electricity prices will rise, the reliability of the power grid will be put at risk and the rule of law will not be upheld."

Opponents have asked the court to block implementation of the rule until legal challenges can be settled. The rules have been described as a federal "power grab" intended to force states to transform their energy systems, since it encourages states to reduce coal use in favor of cleaner-burning natural gas and zero-emission sources.

"This court should issue a stay, and expedite consideration of the Petition For Review, because the states are being immediately and irreparably harmed by EPA's illegal effort to force states to reorder their electrical generation systems," states wrote in their petition.

The states defending the rule, on the other hand, said that the national approach was the only way to take meaningful climate action.

"This is the total absence of a power grab. It's a vacuum," Iowa Attorney General Tom Miller said. "We can never have anything like this on a state-by-state basis. It has to be done comprehensively as part of a national plan."

If the court grants the proponent states the right to intervene, they will have almost two months to file their comments. The court will take legal requests from EPA, its supporters and opponents until Dec. 23.

That means there will be no ruling before or during the United Nations climate negotiations in Paris next month. Schneiderman told reporters that allowing the plan to proceed would give the U.S. a stronger hand in Paris.

"This also will provide the United States with a position of national leadership, so that we can be more effective in negotiating with other countries on reducing greenhouse gas emissions," Schneiderman said.

The rule for existing plants set state-specific goals to reduce carbon, asking states to draw up reduction plans to be implemented starting in 2022. States can meet targets through making coal plants more efficient, replacing coal with natural gas, and building new renewable capacity.

The regulation, together with its companion rule for new power plants, seeks to cut sector carbon emissions by 32 percent from 2005 levels, and to hit that goal in 2030.

The same type of state vs. state legal fight is shaping up for the rule for new plants.

On Tuesday, West Virginia led a coalition of 23 states to sue EPA over that rule, which imposes hard emissions limits on fossil fuel-fired plants. The states alleged that the reductions would require the use of technology not readily available.

With that suit filed, Schneiderman and his allies said they plan to move to intervene in defense of the new plant rule as well.

State Department won't suspend Keystone XL review

By Kevin Rogers

The State Department has rejected TransCanada's request to suspend its review of the Keystone XL pipeline, choosing to “keep that process in place” and complete its full analysis on the oil sands project.

At a State Department briefing, spokesman John Kirby said that the department formally notified the Canadian pipeline firm Wednesday.

“We're not required to pause it based on an applicant's request. There's no legal basis to do that,” Kirby said. “To include interagency review and coordination and to allow significant coordination here, the secretary believes that it's most appropriate to keep that process in place.”

TransCanada had requested the suspension on Monday, to allow more time for Nebraska's Public Service Commission to approve its preferred path through the state. Spokesman Mark Cooper said that the company respects the decision, and said it would continue its push for approval.

“Our efforts will continue to demonstrate that Keystone XL is in the national interest of the United States—just as five reports and 17,000 pages of State Department review have demonstrated over the past seven-plus years,” he said.

The pipeline would carry oil sands crude from Alberta to Gulf Coast refineries. It awaits a final approval for a presidential permit from President Barack Obama. Press Secretary Josh Earnest said this week that a final decision will come before the end of Obama's term.

Environmental groups said the suspension request was a ploy to pass the final decision on the project to the next administration—and a potential Republican president.

Earlier Wednesday Democratic presidential contender Sen. Bernie Sanders of Vermont urged Obama to reject the pipeline before United Nations climate talks in Paris, saying it would be a show of "bold leadership."

Senate votes to scrub EPA water rule over White House objections

By Mary Clare Jalonick

WASHINGTON (AP) — Despite White House objections, the Senate voted for a resolution Wednesday to scrap new federal rules to protect smaller streams, tributaries and wetlands from development and pollution.

Senators voted 53-44 in favor of a "resolution of disapproval," a measure that would void the regulations if also passed by the House and signed by the president. The White House has already said it would veto the resolution.

On Tuesday, Senate Democrats blocked a separate bill that would have required the agencies to withdraw and rewrite the rules. The House had passed similar legislation.

The Obama administration says the rules issued by the Environmental Protection Agency and the U.S. Army Corps of Engineers in May would safeguard drinking water for 117 million Americans. In its veto threat, the White House said that more than 1 in 3 Americans get their drinking water from rivers, lakes, and reservoirs that are at risk of pollution from upstream sources.

Pressure grows on Volkswagen as bad news piles up

By David McHugh and Geir Moulson

FRANKFURT, Germany (AP) — The fallout from Volkswagen's emissions-cheating scandal intensified Wednesday, as investors dumped the company's stock and a credit ratings agency downgraded its debt. European regulators demanded VW speed up its investigation into the cheating, while the company halted sales of seven models in the U.S. that allegedly were part of the plot.

The latest developments followed Volkswagen's admission Tuesday that it had understated the carbon dioxide emissions for 800,000 cars, widening the scope of the scandal.

The company has been unable halt the flow of bad news since mid-September, when the U.S. Environmental Protection Agency said Volkswagen had installed software on 482,000 cars with small diesel engines that enabled them to cheat on emissions tests for one pollutant, nitrogen oxide. The software reduced emissions when the car was on a test stand. Volkswagen acknowledged that 11 million vehicles worldwide have the software.

On Monday, the EPA charged that Volkswagen also used cheating software in some cars with larger diesel engines, including Volkswagen's elite Porsche brand. Volkswagen denied the claim, but over the past two days halted sales in the U.S. and Canada of the models involved: the Volkswagen Touareg, Porsche Cayenne, and the Audi A6, A7, A8, Q5 and Q7.

US trade deficit narrowed to $40.8 billion in September

By Martin Crutsinger

WASHINGTON (AP) — The U.S. trade deficit declined in September to the lowest level in seven months as exports rebounded while imports shrank, reflecting the smallest monthly foreign oil bill in more than a decade.

The trade deficit narrowed to $40.8 billion in September, down 15 percent from a $48 billion deficit in August, the Commerce Department reported Wednesday.

Exports rose 1.6 percent to $187.9 billion, helped by stronger sales of commercial airplanes and jet engines.

Imports contracted 1.8 percent to $228.7 billion. The big drop in oil prices sent petroleum imports down 8.3 percent to $13.8 billion, the lowest level since May 2004.

Michigan phosphorus reduction plan focuses on sewage plants

By The Associated Press

LANSING, Mich. (AP) — Michigan officials have released plans to reduce phosphorus runoff into Lake Erie to ease the worsening problem of harmful algae blooms.

Michigan and Ohio signed a deal in June with the Canadian province of Ontario to cut phosphorus flows into the suffering lake by 40 percent over the next decade.

The Department of Environmental Quality says Michigan will maintain phosphorus reductions required under a permit issued to the Detroit Water and Sewerage Department in 2011 and order the Wayne County Downriver Wastewater Treatment Plant to achieve similar cutbacks.

Additionally, the plan promises cooperation with Ohio and Indiana on phosphorus reduction in the Maumee River basin and continuing study of harmful algae blooms in Michigan waters, including the role that invasive mussels might play.

No oil leak found in sunken barge at bottom of Lake Erie

By John Seewer

TOLEDO, Ohio (AP) — Divers looking for the source of seeping oil near a sunken barge on the bottom of Lake Erie haven't located any active leaks, but they did find four open hatches on the wreckage, the U.S. Coast Guard said Wednesday.

It's not clear yet whether the open hatches could be the source of a petroleum-based solvent spotted on the surface near the U.S.-Canadian border within the past two weeks.

The substance is believed to be coming from the Argo, a tanker barge that went down during a storm in 1937 and is one of 87 shipwrecks on a federal registry that identifies the most serious pollution threats to U.S. waters.

Water samples revealed that the colorless solvent that evaporates quickly is a light to medium oil that has been exposed to the environment for quite some time, said Marvin Kimmel, a Coast Guard spokesman.

Witness cries during safety testimony in ex-coal CEO's trial

By John Raby

CHARLESTON, W.Va. (AP) — A former Massey Energy official wept on the witness stand while describing efforts to address safety problems nine months before an explosion killed 29 miners.

William Ross is one of the government's top witnesses in the trial of former Massey Energy CEO Don Blankenship. Ross continued testifying Wednesday about a once-confidential safety assessment he gave of Massey.

Ross cried after reading excerpts of a July 2009 memo in which he wrote he was "so thrilled about a NEW Massey Energy." Ross testified that he believed Massey Energy was going to take "serious" steps to make improvements.

The Upper Big Branch mine in southern West Virginia exploded in April 2010. Blankenship is charged with conspiring to break safety laws at the mine and lying to financial regulators about safety.

Duke Energy ditches 45-mile power line over Carolina mountains

By The Associated Press

CHARLOTTE, N.C. (AP) — Duke Energy is dropping plans to build a 45-mile power line across the mountains of North Carolina and South Carolina as part of a plan to replace an old coal-fired power plant near Asheville.

Residents and environmental groups opposed the transmission line, which would have connected a power plant that would run off of natural gas in Asheville to a substation in Campobello, South Carolina, north of Spartanburg.

Instead, Duke Energy will build two smaller natural gas plants to replace the coal plant that the utility plans to shut down by 2020. Officials said a third plant might be needed if conservation doesn't help lower electricity demand.

"The new plan balances the concerns raised by the community and the very real need for more electricity to serve this growing region. We're eager to ramp up our efforts in working with the community to reduce power demand across the region," said Lloyd Yates, president of the utility's Carolinas region.

UN head: Climate summit success now rests with world leaders

By Cara Anna

UNITED NATIONS (AP) — Key issues remaining ahead of a major climate summit in Paris this month "have proven too challenging for negotiators to resolve on their own," and responsibility for its success now rests with world leaders, the U.N. secretary-general said Wednesday.

Organizers hope that the summit that begins Nov. 30 will result in the biggest, strongest global agreement ever to fight global warming.

Ban Ki-moon told U.N. member states that 155 countries had submitted their climate plans by the end of October, covering almost 90 percent of global carbon dioxide emissions.

But he said key remaining issues include financial and other support to help developing countries reduce emissions. He called on developed countries to make public pledges of financing before the Paris summit, which runs through Dec. 11.

Paris and other cities want voices heard at climate talks

By The Associated Press

PARIS (AP) — Michael Bloomberg and mayors of large world cities want to weigh in on upcoming U.N. climate negotiations with their local experiences in fighting global warming.

Paris Mayor Anne Hidalgo and Bloomberg, former New York mayor and now a U.N. climate change envoy, are convening mayors of Rio de Janeiro, Mexico City, Johannesburg and other cities Dec. 4 in Paris. Hidalgo's office said the mayors will produce proposals to negotiators at the U.N. conference near Paris Nov. 30-Dec. 11.

Local leaders have been at the forefront of some of the more ambitious measures to reduce emissions. Bloomberg said the mayors' meeting will help ensure their "voice is heard in the treaty negotiations."

His efforts in New York included planting 800,000 trees, improving bus and bike transport and requiring more energy-efficient buildings.

Forces holding Libya oil fields threaten to cut off exports

By The Associated Press

CAIRO (AP) — The forces that control most of Libya's oil fields on Wednesday threatened to cut off exports if foreign companies do not start wiring payments to the internationally recognized government in the country's east.

Until now foreign companies have paid the Central Bank in the capital Tripoli, which is controlled by Islamist-allied militias who back a rival government.

The internationally recognized government, which is based in the country's far eastern city of Tobruk, recently set up its own Central Bank and National Oil Company.

Ali al-Hassi, spokesman for the Oil Fields Guard, told The Associated Press that foreign companies must transfer funds to the new authorities.

18 states formally seek to join legal defense of Clean Power Plan

By Kevin Rogers

A coalition of state and local governments told a federal appeals court Wednesday that they have "a compelling interest" in the success of the Obama administration's rule limiting carbon emissions from existing power plants, and sought permission join the legal battle against states who want the rule thrown out.

The motion to intervene if approved by the U.S. Court of Appeals for the District of

Columbia Circuit, would put the group of 18 states, six cities and one county – led by New York State– on a collision course with the group of 26 states – led by West Virginia – that is trying to kill the Clean Power Plan.

On a call with reporters, New York Attorney General Eric Schneiderman said that EPA's rule is "firmly grounded in science and the law" and is necessary to press other states to get moving on efforts to limit climate-warming emissions.

"What it does is set standards for all states to ensure that some states aren't working hard to reduce carbon emissions only to have it come in from across the borders," he said. "The EPA plan takes all existing, successful technologies – this is not based on technologies that do not already exist – and makes sure every state steps up to the plate and does its fair share."

The motion says the states and municipalities "have unique sovereign interests in limiting climate change pollution in order to prevent and mitigate loss and damage to publicly-owned coastal property, to protect public infrastructure, and to limit emergency response costs borne by the public."

In addition to New York, the states filing the motion include California, Connecticut, Delaware, Hawaii, Illinois, Iowa, Maine, Maryland, Massachusetts, Minnesota, New Hampshire, New Mexico, Oregon, Rhode Island, Vermont, Virginia and Washington. They were also joined by the District of Columbia and the cities of New York, Chicago, Philadelphia and Boulder, Colorado, as well as South Miami and Broward County in Florida.

They are seeking to join the Environmental Protection Agency and a coalition of environmental groups who are defending the Clean Power Plan against 26 states, in addition to dozens of companies and industry groups.

West Virginia Attorney General Patrick Morrisey in a statement said that the rules deserved a robust challenge and he touted the wide coalition opposed to the regulations.

"A growing national coalition of mineworkers, boilermakers, operators, utilities, businesses, Democrats, Republicans, Independents and consumer groups agree: the EPA lacks the authority to transform itself from an environmental regulator into a central energy planning authority," he said. "If the EPA succeeds in this unprecedented and illegal power grab, many jobs will be lost, electricity prices will rise, the reliability of the power grid will be put at risk and the rule of law will not be upheld."

Opponents have asked the court to block implementation of the rule until legal challenges can be settled. The rules have been described as a federal "power grab" intended to force states to transform their energy systems, since it encourages states to reduce coal use in favor of cleaner-burning natural gas and zero-emission sources.

"This court should issue a stay, and expedite consideration of the Petition For Review, because the states are being immediately and irreparably harmed by EPA's illegal effort to force states to reorder their electrical generation systems," states wrote in their petition.

The states defending the rule, on the other hand, said that the national approach was the only way to take meaningful climate action.

"This is the total absence of a power grab. It's a vacuum," Iowa Attorney General Tom Miller said. "We can never have anything like this on a state-by-state basis. It has to be done comprehensively as part of a national plan."

If the court grants the proponent states the right to intervene, they will have almost two months to file their comments. The court will take legal requests from EPA, its supporters and opponents until Dec. 23.

That means there will be no ruling before or during the United Nations climate negotiations in Paris next month. Schneiderman told reporters that allowing the plan to proceed would give the U.S. a stronger hand in Paris.

"This also will provide the United States with a position of national leadership, so that we can be more effective in negotiating with other countries on reducing greenhouse gas emissions," Schneiderman said.

The rule for existing plants set state-specific goals to reduce carbon, asking states to draw up reduction plans to be implemented starting in 2022. States can meet targets through making coal plants more efficient, replacing coal with natural gas, and building new renewable capacity.

The regulation, together with its companion rule for new power plants, seeks to cut sector carbon emissions by 32 percent from 2005 levels, and to hit that goal in 2030.

The same type of state vs. state legal fight is shaping up for the rule for new plants.

On Tuesday, West Virginia led a coalition of 23 states to sue EPA over that rule, which imposes hard emissions limits on fossil fuel-fired plants. The states alleged that the reductions would require the use of technology not readily available.

With that suit filed, Schneiderman and his allies said they plan to move to intervene in defense of the new plant rule as well.

18 states formally seek to join legal defense of Clean Power Plan

By Kevin Rogers

A coalition of state and local governments told a federal appeals court Wednesday that they have "a compelling interest" in the success of the Obama administration's rule limiting carbon emissions from existing power plants, and sought permission join the legal battle against states who want the rule thrown out.

The motion to intervene if approved by the U.S. Court of Appeals for the District of

Columbia Circuit, would put the group of 18 states, six cities and one county – led by New York State– on a collision course with the group of 26 states – led by West Virginia – that is trying to kill the Clean Power Plan.

On a call with reporters, New York Attorney General Eric Schneiderman said that EPA's rule is "firmly grounded in science and the law" and is necessary to press other states to get moving on efforts to limit climate-warming emissions.

"What it does is set standards for all states to ensure that some states aren't working hard to reduce carbon emissions only to have it come in from across the borders," he said. "The EPA plan takes all existing, successful technologies – this is not based on technologies that do not already exist – and makes sure every state steps up to the plate and does its fair share."

The motion says the states and municipalities "have unique sovereign interests in limiting climate change pollution in order to prevent and mitigate loss and damage to publicly-owned coastal property, to protect public infrastructure, and to limit emergency response costs borne by the public."

In addition to New York, the states filing the motion include California, Connecticut, Delaware, Hawaii, Illinois, Iowa, Maine, Maryland, Massachusetts, Minnesota, New Hampshire, New Mexico, Oregon, Rhode Island, Vermont, Virginia and Washington. They were also joined by the District of Columbia and the cities of New York, Chicago, Philadelphia and Boulder, Colorado, as well as South Miami and Broward County in Florida.

They are seeking to join the Environmental Protection Agency and a coalition of environmental groups who are defending the Clean Power Plan against 26 states, in addition to dozens of companies and industry groups.

West Virginia Attorney General Patrick Morrisey in a statement said that the rules deserved a robust challenge and he touted the wide coalition opposed to the regulations.

"A growing national coalition of mineworkers, boilermakers, operators, utilities, businesses, Democrats, Republicans, Independents and consumer groups agree: the EPA lacks the authority to transform itself from an environmental regulator into a central energy planning authority," he said. "If the EPA succeeds in this unprecedented and illegal power grab, many jobs will be lost, electricity prices will rise, the reliability of the power grid will be put at risk and the rule of law will not be upheld."

Opponents have asked the court to block implementation of the rule until legal challenges can be settled. The rules have been described as a federal "power grab" intended to force states to transform their energy systems, since it encourages states to reduce coal use in favor of cleaner-burning natural gas and zero-emission sources.

"This court should issue a stay, and expedite consideration of the Petition For Review, because the states are being immediately and irreparably harmed by EPA's illegal effort to force states to reorder their electrical generation systems," states wrote in their petition.

The states defending the rule, on the other hand, said that the national approach was the only way to take meaningful climate action.

"This is the total absence of a power grab. It's a vacuum," Iowa Attorney General Tom Miller said. "We can never have anything like this on a state-by-state basis. It has to be done comprehensively as part of a national plan."

If the court grants the proponent states the right to intervene, they will have almost two months to file their comments. The court will take legal requests from EPA, its supporters and opponents until Dec. 23.

That means there will be no ruling before or during the United Nations climate negotiations in Paris next month. Schneiderman told reporters that allowing the plan to proceed would give the U.S. a stronger hand in Paris.

"This also will provide the United States with a position of national leadership, so that we can be more effective in negotiating with other countries on reducing greenhouse gas emissions," Schneiderman said.

The rule for existing plants set state-specific goals to reduce carbon, asking states to draw up reduction plans to be implemented starting in 2022. States can meet targets through making coal plants more efficient, replacing coal with natural gas, and building new renewable capacity.

The regulation, together with its companion rule for new power plants, seeks to cut sector carbon emissions by 32 percent from 2005 levels, and to hit that goal in 2030.

The same type of state vs. state legal fight is shaping up for the rule for new plants.

On Tuesday, West Virginia led a coalition of 23 states to sue EPA over that rule, which imposes hard emissions limits on fossil fuel-fired plants. The states alleged that the reductions would require the use of technology not readily available.

With that suit filed, Schneiderman and his allies said they plan to move to intervene in defense of the new plant rule as well.

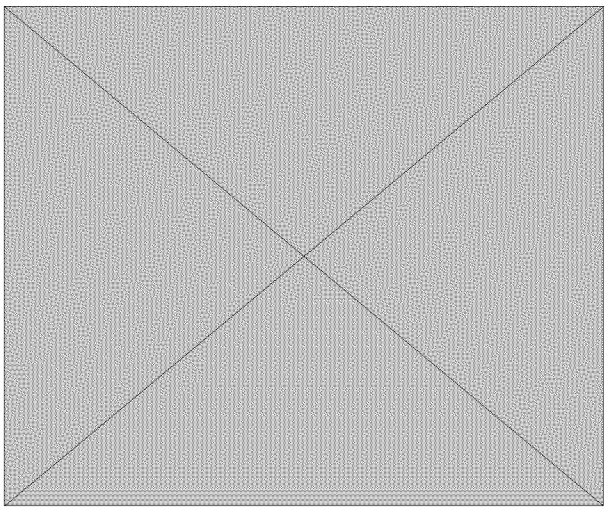
Upcoming Events

State Department won't suspend Keystone XL review



By Kevin Rogers

The State Department has rejected TransCanada's request to suspend its review of the Keystone XL pipeline, choosing to “keep that process in place” and complete its full analysis on the oil sands project.

At a State Department briefing, spokesman John Kirby said that the department formally notified the Canadian pipeline firm Wednesday.

“We're not required to pause it based on an applicant's request. There's no legal basis to do that,” Kirby said. “To include interagency review and coordination and to allow significant coordination here, the secretary believes that it's most appropriate to keep that process in place.”

TransCanada had requested the suspension on Monday, to allow more time for Nebraska's Public Service Commission to approve its preferred path through the state. Spokesman Mark Cooper said that the company respects the decision, and said it would continue its push for approval.

“Our efforts will continue to demonstrate that Keystone XL is in the national interest of the United States—just as five reports and 17,000 pages of State Department review have demonstrated over the past seven-plus years,” he said.

The pipeline would carry oil sands crude from Alberta to Gulf Coast refineries. It awaits a final approval for a presidential permit from President Barack Obama. Press Secretary Josh Earnest said this week that a final decision will come before the end of Obama's term.

Environmental groups said the suspension request was a ploy to pass the final decision on the project to the next administration—and a potential Republican president.

Earlier Wednesday Democratic presidential contender Sen. Bernie Sanders of Vermont urged Obama to reject the pipeline before United Nations climate talks in Paris, saying it would be a show of "bold leadership."

Senate votes to scrub EPA water rule over White House objections

By Mary Clare Jalonick

WASHINGTON (AP) — Despite White House objections, the Senate voted for a resolution Wednesday to scrap new federal rules to protect smaller streams, tributaries and wetlands from development and pollution.

Senators voted 53-44 in favor of a "resolution of disapproval," a measure that would void the regulations if also passed by the House and signed by the president. The White House has already said it would veto the resolution.

On Tuesday, Senate Democrats blocked a separate bill that would have required the agencies to withdraw and rewrite the rules. The House had passed similar legislation.

The Obama administration says the rules issued by the Environmental Protection Agency and the U.S. Army Corps of Engineers in May would safeguard drinking water for 117 million Americans. In its veto threat, the White House said that more than 1 in 3 Americans get their drinking water from rivers, lakes, and reservoirs that are at risk of pollution from upstream sources.

Pressure grows on Volkswagen as bad news piles up

By David McHugh and Geir Moulson

FRANKFURT, Germany (AP) — The fallout from Volkswagen's emissions-cheating scandal intensified Wednesday, as investors dumped the company's stock and a credit ratings agency downgraded its debt. European regulators demanded VW speed up its investigation into the cheating, while the company halted sales of seven models in the U.S. that allegedly were part of the plot.

The latest developments followed Volkswagen's admission Tuesday that it had understated the carbon dioxide emissions for 800,000 cars, widening the scope of the scandal.

The company has been unable halt the flow of bad news since mid-September, when the U.S. Environmental Protection Agency said Volkswagen had installed software on 482,000 cars with small diesel engines that enabled them to cheat on emissions tests for one pollutant, nitrogen oxide. The software reduced emissions when the car was on a test stand. Volkswagen acknowledged that 11 million vehicles worldwide have the software.

On Monday, the EPA charged that Volkswagen also used cheating software in some cars with larger diesel engines, including Volkswagen's elite Porsche brand. Volkswagen denied the claim, but over the past two days halted sales in the U.S. and Canada of the models involved: the Volkswagen Touareg, Porsche Cayenne, and the Audi A6, A7, A8, Q5 and Q7.

US trade deficit narrowed to $40.8 billion in September

By Martin Crutsinger

WASHINGTON (AP) — The U.S. trade deficit declined in September to the lowest level in seven months as exports rebounded while imports shrank, reflecting the smallest monthly foreign oil bill in more than a decade.

The trade deficit narrowed to $40.8 billion in September, down 15 percent from a $48 billion deficit in August, the Commerce Department reported Wednesday.

Exports rose 1.6 percent to $187.9 billion, helped by stronger sales of commercial airplanes and jet engines.

Imports contracted 1.8 percent to $228.7 billion. The big drop in oil prices sent petroleum imports down 8.3 percent to $13.8 billion, the lowest level since May 2004.

Michigan phosphorus reduction plan focuses on sewage plants

By The Associated Press

LANSING, Mich. (AP) — Michigan officials have released plans to reduce phosphorus runoff into Lake Erie to ease the worsening problem of harmful algae blooms.

Michigan and Ohio signed a deal in June with the Canadian province of Ontario to cut phosphorus flows into the suffering lake by 40 percent over the next decade.

The Department of Environmental Quality says Michigan will maintain phosphorus reductions required under a permit issued to the Detroit Water and Sewerage Department in 2011 and order the Wayne County Downriver Wastewater Treatment Plant to achieve similar cutbacks.

Additionally, the plan promises cooperation with Ohio and Indiana on phosphorus reduction in the Maumee River basin and continuing study of harmful algae blooms in Michigan waters, including the role that invasive mussels might play.

No oil leak found in sunken barge at bottom of Lake Erie

By John Seewer

TOLEDO, Ohio (AP) — Divers looking for the source of seeping oil near a sunken barge on the bottom of Lake Erie haven't located any active leaks, but they did find four open hatches on the wreckage, the U.S. Coast Guard said Wednesday.

It's not clear yet whether the open hatches could be the source of a petroleum-based solvent spotted on the surface near the U.S.-Canadian border within the past two weeks.

The substance is believed to be coming from the Argo, a tanker barge that went down during a storm in 1937 and is one of 87 shipwrecks on a federal registry that identifies the most serious pollution threats to U.S. waters.

Water samples revealed that the colorless solvent that evaporates quickly is a light to medium oil that has been exposed to the environment for quite some time, said Marvin Kimmel, a Coast Guard spokesman.

Witness cries during safety testimony in ex-coal CEO's trial

By John Raby

CHARLESTON, W.Va. (AP) — A former Massey Energy official wept on the witness stand while describing efforts to address safety problems nine months before an explosion killed 29 miners.

William Ross is one of the government's top witnesses in the trial of former Massey Energy CEO Don Blankenship. Ross continued testifying Wednesday about a once-confidential safety assessment he gave of Massey.

Ross cried after reading excerpts of a July 2009 memo in which he wrote he was "so thrilled about a NEW Massey Energy." Ross testified that he believed Massey Energy was going to take "serious" steps to make improvements.

The Upper Big Branch mine in southern West Virginia exploded in April 2010. Blankenship is charged with conspiring to break safety laws at the mine and lying to financial regulators about safety.

Duke Energy ditches 45-mile power line over Carolina mountains

By The Associated Press

CHARLOTTE, N.C. (AP) — Duke Energy is dropping plans to build a 45-mile power line across the mountains of North Carolina and South Carolina as part of a plan to replace an old coal-fired power plant near Asheville.

Residents and environmental groups opposed the transmission line, which would have connected a power plant that would run off of natural gas in Asheville to a substation in Campobello, South Carolina, north of Spartanburg.

Instead, Duke Energy will build two smaller natural gas plants to replace the coal plant that the utility plans to shut down by 2020. Officials said a third plant might be needed if conservation doesn't help lower electricity demand.

"The new plan balances the concerns raised by the community and the very real need for more electricity to serve this growing region. We're eager to ramp up our efforts in working with the community to reduce power demand across the region," said Lloyd Yates, president of the utility's Carolinas region.

UN head: Climate summit success now rests with world leaders

By Cara Anna

UNITED NATIONS (AP) — Key issues remaining ahead of a major climate summit in Paris this month "have proven too challenging for negotiators to resolve on their own," and responsibility for its success now rests with world leaders, the U.N. secretary-general said Wednesday.

Organizers hope that the summit that begins Nov. 30 will result in the biggest, strongest global agreement ever to fight global warming.

Ban Ki-moon told U.N. member states that 155 countries had submitted their climate plans by the end of October, covering almost 90 percent of global carbon dioxide emissions.

But he said key remaining issues include financial and other support to help developing countries reduce emissions. He called on developed countries to make public pledges of financing before the Paris summit, which runs through Dec. 11.

Paris and other cities want voices heard at climate talks

By The Associated Press

PARIS (AP) — Michael Bloomberg and mayors of large world cities want to weigh in on upcoming U.N. climate negotiations with their local experiences in fighting global warming.

Paris Mayor Anne Hidalgo and Bloomberg, former New York mayor and now a U.N. climate change envoy, are convening mayors of Rio de Janeiro, Mexico City, Johannesburg and other cities Dec. 4 in Paris. Hidalgo's office said the mayors will produce proposals to negotiators at the U.N. conference near Paris Nov. 30-Dec. 11.

Local leaders have been at the forefront of some of the more ambitious measures to reduce emissions. Bloomberg said the mayors' meeting will help ensure their "voice is heard in the treaty negotiations."

His efforts in New York included planting 800,000 trees, improving bus and bike transport and requiring more energy-efficient buildings.

Forces holding Libya oil fields threaten to cut off exports

By The Associated Press

CAIRO (AP) — The forces that control most of Libya's oil fields on Wednesday threatened to cut off exports if foreign companies do not start wiring payments to the internationally recognized government in the country's east.

Until now foreign companies have paid the Central Bank in the capital Tripoli, which is controlled by Islamist-allied militias who back a rival government.

The internationally recognized government, which is based in the country's far eastern city of Tobruk, recently set up its own Central Bank and National Oil Company.

Ali al-Hassi, spokesman for the Oil Fields Guard, told The Associated Press that foreign companies must transfer funds to the new authorities.

More

Petrobras strike hits oil firm's output

By The Associated Press

SAO PAULO (AP) — Oil production at Brazil's state-run Petrobras has fallen 13 percent in each of the first two days of a strike, the company says, though it expects losses to lessen.

The strike began on Sunday.

An 8.5 percent production loss was registered on Tuesday, the third day of the strike.

Oil workers are seeking an 18-percent rise in their salaries. They've already rejected a Petrobras offer of an 8.1-percent raise.

Subject: WSJ VW story

Nick/Laura,

I wanted to give you a heads up on facts below that may or may not appear in an upcoming WSJ story. Please let me know if you'd like to comment on or dispute any of the below. The timing on this story remains in flux, though it's possible it publishes later in the day today. You may also receive additional emails from me with other items but wanted to get the ball rolling now. Please let me know if you'd like to make anyone from EPA named below available to comment. Some of this isn't totally related to EPA but much of it is. Thanks.

1) Volkswagen didn't support the Obama administration's fuel-economy targets unveiled in 2011 in part because the regulations didn't give diesel models special credit that electric vehicles received.

2) Volkswagen was among the only car makers that didn't send a representative to join President Obama when he unveiled the new fuel-economy targets in July 2011.

3) In October 2014, **Ex. 7** in Auburn Hills, Mich.,

held a conference call with California regulators to respond to the results of tests conducted by West Virginia University that showed VW diesel models emitting more on the road than during laboratory tests. The call was for Ex. 7 and others at VW to share the results of VW's own tests. At this time, VW told regulators the discrepancies stemmed from technical issues.

4) In November 2014, Ex. 7 invited four California regulators to an hour-long presentation on fuel-cell vehicles that use hydrogen for fuel during the Los Angeles Auto Show at the Los Angeles convention center. This was in part an attempt to share VW's environmental efforts with regulators, or, put another way, show the company's environmental bona fides.

5) In December 2014, VW recalled nearly a half million diesel models to address emissions discrepancies but regulatory tests the following year showed the recall repairs didn't address the problem.

6) In early August, VW's Ex. 7 previously a senior regulatory affairs official in the Auburn Hills, Mich., office, flew from Germany to Traverse City, Mich., to meet with Ex. 7 Ex. 7 and Ex. 7 again told Ex. 7 that emissions discrepancies were the result of technical glitches. They also conveyed that later-year model diesel vehicles could be fixed.

7) Around this time, VW officials were insisting to EPA and CARB that the agencies certify 2016 diesel models. VW told them dealers were running out of older models and newer ones were piling up at ports.

8) Regulators later learned that VW had lots of unsold older diesel models.

9) In late August, Ex. 7 told Ex. 7 that VW was using defeat devices on diesel models. Ex. 7 separately made the same admission to the EPA's Christopher Grundler. This was at a transportation conference in Pacific Grove, Calif.

10) VW officials, even after acknowledging the use of defeat devices, still insisted to EPA and CARB that they should certify 2016 diesel models.

11) VW has hired three public relations firms: Hering Schuppener in Germany; Finsbury in the U.K. and Kekst and Co. in the U.S.

12) On Oct. 7, VW revealed in Ex. 7 prepared testimony posted by the House Energy and Commerce Committee Subcommittee on Oversights and Investigations that the company had withdrawn a request for certification of 2016 diesel models because they contained an auxiliary emissions control device that wasn't disclosed to regulators. There isn't evidence that the AECD can game emissions tests. VW has said that the AECD's function is to warm up the engine.

13) The week of Ex. 7 testimony, the EPA expected to receive an explanation from VW of the 2016 2.0L diesel engine AECD's capabilities. It didn't. Calls between EPA and VW were cancelled because VW couldn't make the right people available to EPA.

14) In late October, senior EPA officials, including Ex. 7 expressed frustration to the German Transport Minister about what they viewed as VW's lackluster communications with the agency.

15) A VW spokesman rejects suggestions that communications with EPA are lackluster, saying the company has senior engineers interacting with agency daily.

16) As of late October, VW still hadn't fully explained the AECD on the 2016 2.0L diesel-engine models to EPA.

17) Communications between VW and EPA begun to slightly improve in late October, with knowledgeable VW executives starting to talk to EPA officials.

18) In November, VW stopped previous contrition and disputed new allegations from EPA that additional models with 3.0L diesel engines contained defeat devices.

19) A VW spokesman said the company had no intention of halting sale of the implicated 3.0L diesel models.

20) VW overnight Tuesday and into Wednesday reversed course and halted sales of the implicated 3.0L diesel models and additional diesel models.

21) VW's "Diesel Information" website doesn't yet tell consumers there is a stop-sale order on those other models. It only has information about the 2.0L models.

22) Charles Taylor, a 74-year-old retired athletic director in Brevard, N.C., leased a 2015 Audi TDI Q7 from Harmony Motors of Asheville, N.C. last week. He now wants the dealership to take back the vehicle and make him whole. He is concerned the residual value will suffer as a result of the stop-sale order and feels Audi should have taken the vehicle off the market months ago. He expects to take a loss on the lease and doesn't feel he should.

23) Many experts and other observers fault VW for the way it has responded to the crisis thus far, including for mixed and incomplete messages and tussling with government officials. The response has left regulators, lawmakers, investors and customers around the world exasperated.

24) The U.S. Justice Department cited GM for cooperating in its investigation of a defective ignition switch linked to more than 100 deaths and noted it conducted a swift and robust internal probe, fired wrongdoers and furnished prosecutors with unvarnished facts, including volunteering documents ordinarily protected by attorney client privilege. Prosecutors also noted a compensation fund that doled out hundreds of millions of dollars to victims.

25) Investors are questioning VW's longstanding corporate governance, which features a board dominated by VW workers and the Porsche and Piech families. The newly appointed board chairman is also VW's finance chief. The extended family of the grandson of VW's founder still controls most decisions.

I know that's a long list but want to ensure you aren't surprised. More as things develop.

Best,

Mike

Hi Dave;

I received your voice mail and have attached the August presentation used in the phone discussion with EPA. I'm not sure if you were there, but I know Jim was on the line. We tested the PHEV in the EV mode (default mode) both in Wolfsburg and at EPA. Perhaps you can discuss this with Jim for further notes.

If you can call, when you have a minute, we can discuss.

Thanks,

Richard

Subject: FW: Confirmation of Certification Fees Payment

Hi Ex. 6

I opened up this mail this morning to my surprise. Payment of $80,223 was electronically transferred on Friday, November 6th for three Audi test groups: HVGAJ02.0AAC, HVGAT03.0AUT and HVGAV05.2NLE. I did not file any fee filing form for this HVGAJ02.0AAC test group.

My understanding was that the fee filing form must now be created/filed on the pay.gov website as outlined in CD-15-08 of April 20, 2015 with an effective date of October 1, 2015. Is that correct?

Have the other two test groups been in receipt of payment now too, or should I file a fee filing form on pay.gov for the other two test groups or all three?

Thanks for your help.

Best regards,
Richard

Subject: IUVP Waver CY 2015

Hi Bill, hi Jim,

Overall we got pretty good responses for our CY 2015 IUVP program, but it is always difficult to find cars over 90 K miles.

So here are 6 wavers in one document where we request to test cars with lower mileage.

We got responses for all test groups and have cars lined up for testing but they are under the 75% of full Useful life.

Maybe you can give me a heads up so we can proceed with our testing.

Thanks for your help and have a good weekend.

IUVP Waver request

Volkswagen Group of America

Waver for testing a vehicle with lower mileage

Test group: AVWXV02.5257

Emission Standard: Bin 3 / PZEV

Vehicles in test group: New Beetle / New Beetle Convertible

Sales US: **Ex. 4 - CBI**

Sales Procurement state: CO

Vehicles tested: 2 HM cars tested

Number of mailing campaigns: 2

Letters per campaign: 1st: 15 / 2nd: 15

Incentive: $500

Response: We received 2 return cards but none with 50 K mi.

Comment: We will test the car with the highest mileage available.

Subject: RE: IUVP Waver CY 2015

Hi Bill,

thanks for the response and sorry for the confusion. Here is more information:

to 1. No, this is what we'd like to do if we get the approval on the wavers. That's why I left a message on Jim's voicemail today to figure out if the wavers are approved.

There will be no testing until I get an approval in any from EPA.

to 2. Yes, I am aware of the incentives used by Porsche and Mercedes which are higher, we do the same thing for newer luxury class too. Our number of cars we don't find is very low because we try very hard to find cars and even managed to get the requested Bentley last year.

However on all these test groups we got response cards (between 2 and 20) so customer participation is not the problem, but we don't have responses over 75% FUL.

to 3. Yes, I read the document and provided the information how many mailings we did and what the incentive was. If you need more information, please let me know.

To 4. I am aware of the regulation and we **are not trying to lower the requested test group size**. We will test the required test group size but have problems finding cars over %75 FUL and would like to test the car with the highest mileage we can find instead, so the number of tested cars will not be affected.

We have a very good track record of finding the cars needed and very rarely miss to find the required cars but High Mileage cars with 75 % are very hard to come by.

Please let me know if you need any more information.

Subject: RE: IUVP Waver CY 2015

Hi Tobias,

I'm concerned with the attachment you sent with waiver requests for six test groups,

each of which the following comment:

"We will test the car with the highest mileage available."

Hopefully I'm misunderstanding your comment and it leads to two questions.

1. Does this mean that VW assigned itself IUVP waivers, and tested or will test six vehicles that do not meet the regulatory requirements?

2. Do you have knowledge of the incentives used by competing manufacturers, so that a level playing field can be maintained, to avoid providing a competitive advantage to select manufacturers?

3. Did you read the document I sent you in my email of Tue 4/28/2015 2:44 PM, on the type of information I need determine whether a waiver should be granted?

4. Are you familiar with the following regulatory requirement?

86.1845-04 (c) (3):

The approval of any such request, and the substitution of an alternative sample size requirement for the test group, will be based on a review of the procurement efforts made by the manufacturer to determine if all reasonable steps have been taken to procure the required test group size."

I know the IUVP program is extensive and requires a lot of work, and it can be frustrating when owners won't participate. But as the document I sent you in April explains, there a many variables that have to be considered to do it right.

I hope to get back to you on Thursday with IUVP waiver decisions, but you haven't given me much evidence "to determine if all reasonable steps have been taken to procure the required test group size."

Best wishes,

Bill

Subject: IUVP Waver CY 2015

Hi Bill, hi Jim,

Overall we got pretty good responses for our CY 2015 IUVP program, but it is always difficult to find cars over 90 K miles.

So here are 6 wavers in one document where we request to test cars with lower mileage.

We got responses for all test groups and have cars lined up for testing but they are under the 75% of full Useful life.

Maybe you can give me a heads up so we can proceed with our testing.

Thanks for your help and have a good weekend.

Subject: RE: IUVP Waver CY 2015

Hi Bill,

thanks for the response and sorry for the confusion. Here is more information:

to 1. No, this is what we'd like to do if we get the approval on the wavers. That's why I left a message on Jim's voicemail today to figure out if the wavers are approved.

There will be no testing until I get an approval in any from EPA.

to 2. Yes, I am aware of the incentives used by Porsche and Mercedes which are higher, we do the same thing for newer luxury class too. Our number of cars we don't find is very low because we try very hard to find cars and even managed to get the requested Bentley last year.

However on all these test groups we got response cards (between 2 and 20) so customer

participation is not the problem, but we don't have responses over 75% FUL.

to 3. Yes, I read the document and provided the information how many mailings we did and what the incentive was. If you need more information, please let me know.

To 4. I am aware of the regulation and we **are not trying to lower the requested test group size**. We will test the required test group size but have problems finding cars over %75 FUL and would like to test the car with the highest mileage we can find instead, so the number of tested cars will not be affected.

We have a very good track record of finding the cars needed and very rarely miss to find the required cars but High Mileage cars with 75 % are very hard to come by.

Please let me know if you need any more information.

Best regards

Hi Tobias,

I'm concerned with the attachment you sent with waiver requests for six test groups, each of which the following comment:

"We will test the car with the highest mileage available."

Hopefully I'm misunderstanding your comment and it leads to two questions.

1. Does this mean that VW assigned itself IUVP waivers, and tested or will test six vehicles that do not meet the regulatory requirements?

2. Do you have knowledge of the incentives used by competing manufacturers, so that a level playing field can be maintained, to avoid providing a competitive advantage to select manufacturers?

3. Did you read the document I sent you in my email of Tue 4/28/2015 2:44 PM, on the type of information I need determine whether a waiver should be granted?

4. Are you familiar with the following regulatory requirement?

86.1845-04 (c) (3):

The approval of any such request, and the substitution of an alternative sample size requirement for the test group, will be based on a review of the procurement efforts made by the manufacturer to determine if all reasonable steps have been taken to procure the required test group size."

I know the IUVP program is extensive and requires a lot of work, and it can be frustrating when owners won't participate. But as the document I sent you in April explains, there a many variables that have to be considered to do it right.

I hope to get back to you on Thursday with IUVP waiver decisions, but you haven't given me much evidence "to determine if all reasonable steps have been taken to procure the required test group size."

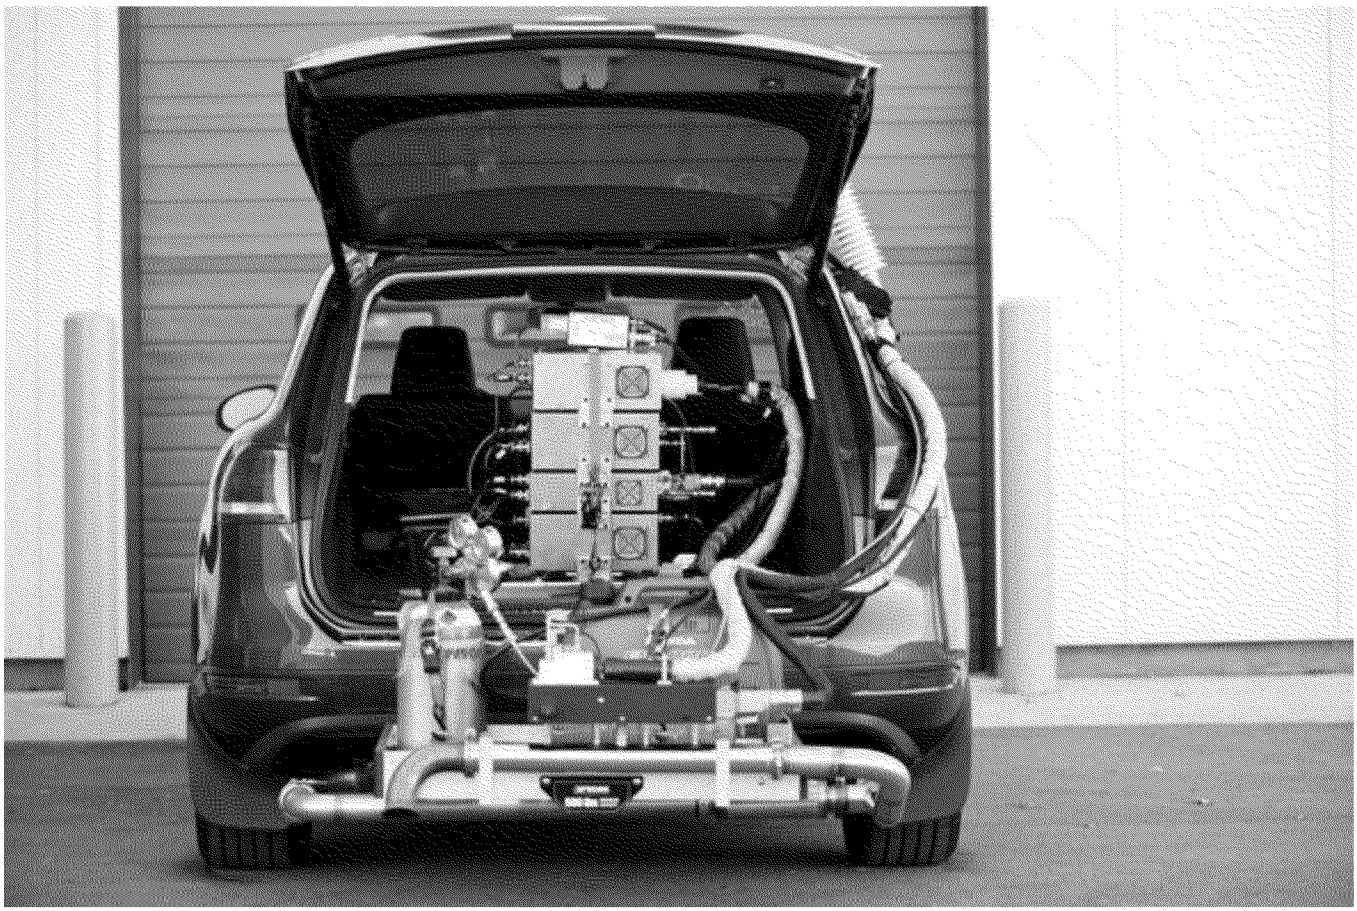
Galvanized by VW Scandal, E.P.A. Expands On-Road Emissions Testing

Danny Hakim and Jad Mouawad



A Rube Goldberg-type machine is being used as the United States and Canada try to catch emissions cheaters. Laura McDermott for The New York Times

Concerned that cheating on vehicle emissions could be prevalent across the automobile industry, regulators in the United States and Canada are significantly expanding their on-the-road emissions tests to cover all makes and models of diesel cars.

The tests, which come in the wake of Volkswagen's admission that it installed software on more than 11 million cars to evade emissions standards, are being conducted randomly and

in real-world conditions, rather than in traditional laboratory settings, to increase the odds of catching cheaters.

"We are very anxious to find out if there are any other programs out there," said Christopher Grundler, director of the office of transportation and air quality at the Environmental Protection Agency.

The first tests on brands manufactured by Volkswagen, completed last week, found the cheating software on about 10,000 VW, Audi and Porsche models not previously disclosed by the German manufacturer. Volkswagen disputes the E.P.A.'s claim, saying the software recently uncovered was not intended to thwart emissions testing.

A 2014 Volkswagen Touareg TDI with emissions testing equipment. VW disputes the E.P.A.'s latest findings of illegal software. Laura McDermott for The New York Times

Since then, no other automobile company has been found to have installed so-called defeat software, although it will take several weeks for all makes and models to be tested.

Mr. Grundler declined to describe the tests, except to say they will focus on 2015 and 2016 model year diesel cars. They will also be performed on all new cars that manufacturers seek to certify, he said.

The move by the E.P.A. is a significant expansion of its testing regimen, which previously

did road testing for pollutants mainly on large trucks. It also makes road-test spot checks of older cars to ensure that their pollution-control mechanisms are still effective. Tests are also being performed in cooperation with regulators in Canada and California.

But Volkswagen's scandal has highlighted deficiencies in the existing lab tests in both North America and Europe.

"Regulators must think more like the cheaters," said Luke Tonachel, a specialist in auto emissions for the Natural Resources Defense Council. "E.P.A. is starting to use new tests that can't be readily gamed by manufacturers."

An official with the trade group the Alliance of Automobile Manufacturers said it supported the E.P.A. expansion of road testing.

Europe has been planning its own real-world testing for several years, though those tests will not start until 2017. Other countries, including South Korea, China, India and Mexico, have announced or are considering road tests.

The new and more unpredictable testing represents a sea change from the traditional, highly controlled lab setting where vehicles are put on a treadmill, wired with sensors and run through a standardized and familiar routine.

"Manufacturers have asked us what the test conditions would be, and we've told them that they don't have a need to know," Mr. Grundler said. "It will be random."

The road testing could dim the future for diesels, which have higher pollution emissions, making electric and hybrid vehicles more attractive in terms of their effect on the environment.

American regulators believe that road testing is relatively crude and cannot match the precision of lab results at detecting nitrogen oxide and other fine particles and pollutants. Rather, the aim of their road tests is to help validate lab findings by catching cars whose road performance reveals higher emissions readings.

Road testing involves capturing exhaust gases with a Rube Goldberg-type machine the size of a pair of large suitcases that fits in the trunk of most cars, with a few pieces hanging off the back. The technology, which was developed by an E.P.A. engineer, is decades old but until now has been used mostly to test diesel trucks.

To obtain test vehicles, the E.P.A. gets cars directly from manufacturers or sometimes requests loaners from dealers. It also uses rental cars and even reaches out to ordinary drivers to obtain the specific make and model needed for testing. In those cases, the car owner is offered $20 a day and a loaner car in exchange for the use of the vehicle for a couple of weeks. Once the tests are done, the cars are returned cleaned, with a full tank of fuel and an oil change.

Lab testing in Europe is done exclusively by automakers and their contractors, and they are permitted to use preproduction vehicles that will never be sold. The rules also allow them to modify the cars in various ways, for instance, by stripping out back seats to make them lighter, taping up the doors and grilles to make them more aerodynamic and fully charging the battery to put less stress on the engine.

The United States has a more robust lab-testing system. Regulators perform their own lab emissions tests to check manufacturers' claims. American regulators test preproduction vehicles and those that are already on the road.

As the United States and Europe incorporate road tests, their regulatory regimens are diverging further. Thus far, American regulators are using road tests to catch illegal cheating strategies, known as defeat devices, but they will continue to rely on tests in laboratories.

Europe plans to test in a different way. In addition to lab tests, cars sold in Europe will have to pass separate emissions tests on the road with a new set of maximum emissions of nitrogen oxides.

Europe's road tests as currently proposed will still not be performed by regulators. They will also continue to involve preproduction vehicles, according to John German, a former E.P.A. official and a senior fellow at the International Council on Clean Transportation, an environmental group that played a pivotal role in uncovering Volkswagen's cheating.

Mr. German also said the proposed European road test "does not include cold starts" of the engine, which is when most emissions occur.

The European plan, under development since 2011, still faces what could be a contentious fight in the European Parliament, amid criticism that policy makers have watered down earlier proposals.

Automakers say they need to be allowed to exceed Europe's existing nitrogen oxide standards significantly in the new road tests, which are performed under less predictable conditions than lab tests.

Environmental groups disagree and were angered last week after a review panel appeared to side with automakers.

Under the latest European plan, the road tests, which begin to take effect in 2017, would initially allow automakers to emit more than twice the current European limits on nitrogen oxides. The requirements would become tougher by 2021, when all new cars would be required to emit a level of nitrogen oxides in road tests that is no more than 50 percent above current limits.

European regulators previously sought to allow automakers to exceed the current regulatory limit by less than 20 percent. Environmental groups want automakers to eventually meet the

same number on the road that they do in the lab.

Lucia Caudet, a spokeswoman for the European Commission, the European Union's executive branch, said that since diesel cars, in practice, were already emitting far more nitrogen oxides than permitted by European standards, the new tests would still be a substantial improvement. "We consider this agreement progress," she said, "although of course ideally we would like to see real driving emission reduced further."

American regulators have chosen a different approach because the E.P.A. doesn't think emissions tests conducted on the road are accurate enough to measure to a specific emissions standard. "We think they are much better suited for these screening purposes and looking for defeat devices," Mr. Grundler said.

The auto industry has publicly embraced the coming European tests, while lobbying to make them less demanding.

At a hearing last month, a member of the British Parliament asked Mike Hawes, the chief executive of the leading auto-industry trade group in Britain, how the industry could restore consumer confidence.

"The fix for this will be the introduction of so-called real-world driving emissions," Mr. Hawes said.

COAL:

EPA begs appeals court to block McCarthy deposition

Manuel Quiñones, E&E reporter

Published: Wednesday, November 11, 2015

U.S. EPA is turning to a federal appeals court for a second time in recent months to shield the agency in litigation by Murray Energy Corp.

Murray sued EPA last year in U.S. District Court for the Northern District of West Virginia, accusing the agency of not taking enough account of the economic impacts of regulatory actions affecting coal-fired power plants.

Yesterday, the agency asked the 4th U.S. Circuit Court of Appeals for an order preventing Murray attorneys from deposing Administrator Gina McCarthy.

Justice Department attorneys representing EPA wrote in a filing, "It is well settled that 'top executive department officials should not, absent extraordinary circumstances, be called to testify regarding their reasons for taking official actions.'"

The administration asked U.S. District Court Judge John Preston Bailey for relief in October (*E&ENews PM*, Oct. 19). But he has yet to rule on the motion to block McCarthy's planned deposition later this month.

Murray attorneys have expressed willingness to scrap the deposition if the agency turns over certain information. At the same time, they have defended their request to require her to testify.

Murray attorneys say "she has unique and superior personal knowledge of the key facts involved," not only as administrator but as former head of EPA's air office.

But administration attorneys told the appeals court that Murray "did not come close to identifying extraordinary circumstances that could justify compelling the deposition of Administrator McCarthy, a Cabinet-rank officer. It is utterly inconceivable that her testimony could be relevant (much less necessary) to Murray's straightforward nondiscretionary-duty claim."

Earlier this year, a three-judge panel of the same appeals court rejected EPA's request to limit the scope of discovery (*Greenwire*, July 14). The administration said EPA has turned over more than 130,000 documents and made midlevel officials available for deposition.

CAMPAIGN 2016:

Republicans slam Obama climate rule in 5th debate

Jennifer Yachnin, E&E reporter

Published: Wednesday, November 11, 2015

If a Republican presidential debate takes place and South Carolina Sen. Lindsey Graham isn't invited, do moderators still ask any questions about climate change policy?

The answer last night in Milwaukee was yes.

A dozen Republican presidential contenders faced off as the GOP held its fourth primary debate -- with eight candidates in the prime-time debate and four contenders in the undercard session -- primarily focusing on issues including tax plans and foreign policy.

But the main debate also briefly veered into a discussion over carbon emissions regulations, when Kentucky Sen. Rand Paul fielded a moderator's question about whether domestic energy production could be balanced with climate change policy.

Paul, whose flagging campaign makes him a long-shot bid for the White House, criticized the Obama

administration's efforts to reduce power-sector carbon emissions and vowed to repeal the Clean Power Plan if elected.

"The first thing I would do as president is repeal the regulations that are hampering our energy that the president has put in place, including the Clean Power Act," Paul said.

That promise puts Paul in line with other would-be GOP presidential nominees who have promised to undo the regulations if elected, including Florida Sen. Marco Rubio, former Florida Gov. Jeb Bush and former Hewlett-Packard CEO Carly Fiorina. Retired neurosurgeon Ben Carson has also told *E&E Daily* that he opposes the regulations, while Louisiana Gov. Bobby Jindal said last night that he would "rein in the EPA" (*E&E Daily*, Nov. 3).

During his response, Paul also sought to walk back his support for a Senate amendment earlier this year acknowledging that human activity contributes to global warming.

"While I do think man may have a role in our climate, I think nature also has a role. The planet is 4.5 billion years old; we've been through geologic age after geologic age. We've had times when the temperature's been warmer; we've had times when the temperature's been colder. We've had times when the carbon in the atmosphere has been higher," Paul said. "I think we need to look before we leap."

He went on to criticize the Obama administration, asserting that the president "has devastated my state."

"I say the president is not only destroying Kentucky, he's destroying the Democratic Party down there, because no one wants to associate with him," Paul said, an apparent allusion to Republican businessman Matt Bevin's unexpected win in the state's gubernatorial contest last week (*E&E Daily*, Nov. 4).

Bush, who disparaged Democratic front-runner Hillary Clinton for her opposition to the recently rejected Keystone XL pipeline, also criticized the Obama administration over its focus on carbon emissions.

"We've had a 10 percent reduction in climate emissions, and it isn't because of Solyndra," Bush said, in reference to the bankrupt California solar firm that received Energy Department loan guarantees and later became a Republican symbol of government failure in the 2012 election cycle. "It isn't because of the central planners in Washington, D.C. It's because we've had a great American success story: the explosion of natural gas."

He added: "We've got to get to a conservation and environmental policy that goes beyond just carbon."

Texas Sen. Ted Cruz also sought to inject himself into the discussion about climate change policy but was cut off by Bush and did not complete his remarks.

In previous debates, moderator questions on climate change policy have proved rare, with Graham -- who is often cited as a Republican outlier for his allegiance to climate change science -- typically fielding the inquiries.

But neither Graham nor former New York Gov. George Pataki met the required polling cutoff to participate in the most recent Republican debate.

League of Conservation Voters Senior Vice President for Campaigns Daniel Weiss last night expressed disappointment over candidates' focus on ending the Clean Power Plan.

"These national carbon pollution limits have been embraced by a broad and diverse set of stakeholders -- including utilities, public health experts, clean energy advocates and others. Meeting the global threat of climate change requires U.S. leadership -- but we didn't see it from any of the candidates on stage

tonight," he said.

Democratic presidential primary contenders will face off Saturday in Iowa in a debate hosted by CBS News. Republican candidates will not debate again until Dec. 15, when CNN is set to host an event in Nevada.

CLEAN POWER PLAN:

Green group presses Dem lawmakers on carbon rule

Daniel Bush, E&E reporter

Published: Wednesday, November 11, 2015

Environment America launched an ad campaign today pressuring a trio of Democratic senators to vote against a resolution aimed at overturning U.S. EPA's Clean Power Plan.

The green group's online ad blitz urges Democratic Sens. Bob Casey of Pennsylvania, Mark Warner of Virginia and Michael Bennet of Colorado -- who is up for re-election next year -- to oppose a Congressional Review Act resolution that would block the Obama administration's rules for power-sector carbon emissions.

"Senator Warner, will you let big polluters and their allies take away public health benefits, or will you support cleaner air, protect our climate [and] ensure a healthy future for our families?" the ad targeting the Virginia Democrat asks.

The ads aimed at Bennet and Casey -- who, like Warner, have both publicly supported the Clean Power Plan -- thank the lawmakers for "protecting our climate." The ads are running online in Colorado, Pennsylvania and Richmond, Va., through Friday, an Environment America official said.

The push comes as Senate Majority Leader Mitch McConnell (R-Ky.) plans to hold a vote next week on the CRA resolution blocking the Clean Power Plan. The EPA rule is a favorite target of congressional Republicans and moderate Democrats from energy-producing states.

Environment America isn't the only green group ramping up its messaging effort ahead of the CRA vote.

Sierra Club Executive Director Michael Brune urged members of a new Senate Republican working group on energy and environmental policy -- made up of Sens. Mark Kirk of Illinois, Kelly Ayotte of New Hampshire, Lamar Alexander of Tennessee and Lindsey Graham of South Carolina -- to reject the resolution (*E&ENews PM*, Nov. 10).

TRANSPORTATION:

Stakeholders seek more money over shorter time in highway bill

Ariel Wittenberg, E&E reporter

Published: Wednesday, November 11, 2015

Transportation groups wrote to Congress yesterday urging that the highway bill under debate increase federal investments in transportation projects, even if it means reauthorizing surface transportation

programs for less time.

The letter, sent by 40 stakeholder groups, was written as legislators prepare to go into conference to hammer out the differences between House and Senate versions of the highway bill.

"The goal of the conference committee should be to produce final legislation that confronts the nation's surface transportation challenges with policy reforms AND increased federal investment levels," the letter says. "To that end, a reauthorization bill of less than six years duration with significant highway and public transportation investment increases is far superior to a six-year bill with status quo funding levels."

Determining how to finance the $325 billion road and public transit package has been a major point of contention as the bills moved through Congress (*E&E Daily*, Nov. 5).

Currently, the Senate bill authorizes funding for six years but provides enough money only to pay for the first three. The House was able to cover five years of the bill's cost at the last minute last week thanks to an amendment by Rep. Randy Neugebauer (R-Texas) that would help finance the bill by reducing dividends that the Federal Reserve pays to some large member banks (*Greenwire*, Nov. 5).

That last-minute fix has some members of the conference committee considering authorizing a fully funded five-year authorization package.

But the transportation groups say the House solution is not enough because it would "fail to keep pace with the projected annual inflation increases."

"While the reliability of future federal highway and public transportation funds is a critical benefit of a multi-year reauthorization bill, such predictability alone is not sufficient to drive needed surface transportation improvements," the letter says. "We urge you to ensure any surface transportation conference report seeks to maximize the benefits it would provide as opposed to the number of years it would last."

ENERGY EFFICIENCY:

E.U. rejects Dyson's claims of VW-style vacuum deception

Published: Wednesday, November 11, 2015

A bid by appliance maker Dyson Ltd. to change E.U. energy efficiency labeling laws to eliminate perceived unfairness was rejected by an E.U. court.

Claiming deception "akin to the Volkswagen scandal," company founder James Dyson argued last month that E.U. regulators tested vacuums only on clean surfaces, which could "mislead consumers on the real environmental impact of the machine they are buying." He filed legal action against appliance rivals Bosch and Siemens AG, which primarily make bagged vacuum cleaners, as opposed to Dyson's bagless ones (*Greenwire*, Oct. 21).

"The court acknowledges that the suction performance and energy efficiency of a vacuum cleaner with a dust-loaded receptacle will be reduced due to dust accumulation," the E.U. general court said in its ruling. "It observes, however, that the [European] commission could not use tests conducted on the basis of a dust-loaded receptacle, as they are not reliable, accurate and reproducible, as required by the regulation."

BSH Home Appliances Corp., which manufactures vacuums sold under the Bosch and Siemens brands, said it will take legal action against Dyson regarding the "unfounded and untrue" statements (*London Guardian*, Nov. 11). **-- BTP**

STATES:

Carbon tax could be coming to a handful of regions

Published: Wednesday, November 11, 2015

Several states are moving close to charging fees on carbon emissions and passing the proceeds to residents in the form of dividend checks.

In Washington state, advocates are working to gather signatures for a ballot initiative to cut the state's carbon footprint and reform its tax system. If it qualifies, it would be the first carbon tax to reach the ballot in the United States.

Citizens and state lawmakers in Massachusetts, Vermont, Rhode Island and Oregon have also considered similar proposals. British Columbia already has a carbon tax that it returned to residents.

The plan, if enacted, will show consumers that action on climate change can offer benefits to them, not only personal sacrifices.

"I think it's a relatively new idea for a lot of people," said Yoram Bauman, who founded a group, Carbon Washington, that supports the plan. "When you talk about climate change, they think they're going to have to spend money on solar panels or stuff like that" (Chelsea Harvey, *Washington Post*, Nov. 10). **-- SP**

OIL AND GAS:

Shell president supports cap and trade over current approach

Published: Wednesday, November 11, 2015

Shell Oil Co.'s president said yesterday that a national -- or global -- carbon tax or cap-and-trade system would be better for the energy industry than the patchwork of state and federal regulations it currently must deal with.

"I don't know that I really care which it is. It just has to be a very well-designed system," Shell President Marvin Odum said in a speech at the University of Houston. "I think it's important to have a level playing field."

Shell parent company Royal Dutch Shell PLC was one of six major European fossil fuel companies that asked the United Nations earlier this year to work on creating national and eventually global carbon pricing systems to help fight climate change (*ClimateWire*, June 2).

Odum said Shell is not backing away from fossil fuels and plans to expand its natural gas operations even further with the acquisition of BG Group PLC (*EnergyWire*, Nov. 2).

"You're actually going to require a tremendous amount of fossil fuels and hydrocarbons over the next 40 to 50 years," Odum said (Jordan Blum, *Fuel Fix*, Nov. 10). **-- BTP**

WIND:

Bill Clinton touts renewables at Panama turbine farm

Published: Wednesday, November 11, 2015

Former President Bill Clinton came to Central America's largest wind farm in western Panama yesterday to tout the potential of renewable energy.

The wind farm near Penonome, Panama, is set to open next year and will be able to produce 6 to 8 percent of Panama's electricity.

The project received support from the Clinton Global Initiative, as well as a private equity firm that invests in Latin American energy projects.

Other stops on Clinton's trip are Peru and El Salvador (AP/*New York Times*, Nov. 10). **-- SP**

PEOPLE:

Technology key to solving climate woes -- Bill Nye in new book

Published: Wednesday, November 11, 2015

Bill Nye's new book tackles how humanity could solve climate change through new technology, and he's optimistic it can still happen.

"My grandfather went into World War I on a horse," Nye said. "He was on a horse, for crying out loud. But 20 years later, when people went to extend that conflict, to reignite the world war, nobody who was serious about fighting a battle went into a battle on a horse. Everything changed in 20 years. Everything."

In "Unstoppable: Harnessing Science to Change the World," Nye, an inventor and former engineer, proposes energy-saving ideas such as better batteries, robocab fleets for cities, rockets using hydrogen fuel and biofuels.

"There are a great many engineering options and, I hope, policy ideas that people will embrace to help humankind save the Earth for humankind," Nye said. "As I like to say, the Earth is going to be here no matter what we do. We want to save the Earth for us" (Chris Mooney, *Washington Post*, Nov. 10). **-- BTP**

BIOFUELS:

Producers push back against anti-ethanol ads in Ohio

Tiffany Stecker, E&E reporter

Published: Wednesday, November 11, 2015

Ohio ethanol producers are protesting recent ads in the state to discredit the corn-based renewable fuel as a low-carbon alternative to petroleum.

The Ohio Ethanol Producers Association and the Ohio Corn and Wheat Growers Association are reacting to the American Council for Capital Formation's ad buy in the Buckeye State for TV spots that assert corn

ethanol is no better than gasoline when it comes to greenhouse-gas-reducing effects.

"I don't think that the misleading ads that we're seeing can go unchecked," Mark Borer, president of the Ohio Ethanol Producers Association, said in a call with reporters.

ACCF last week announced that the ads would run in Ohio and three New England states and released analyses on how the RFS has affected the environment and economy in the states (*E&E Daily*, Nov. 3).

Borer criticized the ads as an effort to malign ethanol at a time when the corn fuel is cheaper than gasoline. Ethanol prices currently range from $1.52 to $1.65 per gallon, and the U.S. average for gasoline is $2.24 per gallon, according to the U.S. Energy Information Administration.

"Ethanol right now is at a significant price advantage compared to gasoline," said Borer. "That's what's driving this. It's important for us to realize that's what's behind this campaign."

ACCF's ad buy allowed the ads to run in the Ohio market for one week. The ads aired on Monday before ACCF received a letter from the Ohio groups to stop them, said a source affiliated with ACCF.

The Ohio groups said their letter to ACCF on the ads went unanswered. The source said ACCF received the letter less than 24 hours ago.

"I think these guys sometimes get lost in this weird, parallel universe in which they actually convince themselves that this mountain of damning, definitive science and data about corn ethanol's environmental impact doesn't exist, or that folks don't actually know about it," Dave Banks, executive vice president of ACCF, said in a statement.

FEDERAL AGENCIES:

Obama nominates acting OPM chief for job permanently

Kevin Bogardus, E&E reporter

Published: Wednesday, November 11, 2015

Beth Cobert has been nominated by President Obama to be director of the Office of Personnel Management.

Cobert has been leading the personnel office on an acting basis as it has picked up the pieces from the federal government's massive data breach that leaked sensitive information for 21.5 million people compiled from the agency's background investigations.

That breach, first disclosed in June, eventually led to the resignation of Katherine Archuleta as OPM chief. Cobert, then deputy director at the Office of Management and Budget, stepped in to head the office under an interim status (*Greenwire*, July 10).

In announcing his pick of Cobert for OPM yesterday, Obama said, "Beth will bring tremendous depth and quality of experience to her role as director of the Office of Personnel Management."

He added: "As acting director, Beth has effectively pursued strategies to strengthen cybersecurity and improve the way the government serves citizens, businesses and the federal workforce both past and present. I thank Beth for her commitment to serving the American people and look forward to working with her in the months ahead."

Cobert has already had to handle some tough issues as acting OPM chief.

In September, the agency disclosed that more federal employees than originally estimated -- roughly 5.6 million -- had their fingerprints stolen in the breach (*Greenwire*, Sept. 23). Cobert has also been leading OPM's effort to notify millions of government workers that their personal data have been compromised.

Cobert first joined the Obama administration in 2013 when she came to OMB. Before that, she was with consulting giant McKinsey & Co. for almost 30 years, holding down top jobs there such as director and senior partner.

Cobert's nomination won praise yesterday from both sides of the aisle.

"She has impressed me as a talented, qualified, and competent choice for OPM Director. I am hopeful that she can lead and fix this agency," Rep. Jason Chaffetz (R-Utah), chairman of the House Oversight and Government Reform Committee, said in a statement.

Panel ranking member Elijah Cummings (D-Md.) said he was "confident that she is the right person to lead the agency."

Sen. Tom Carper (D-Del.), ranking member of the Senate Homeland Security and Governmental Affairs Committee, said Cobert was "impressive, decisive and well-respected on both sides of the aisle in Congress."

"I urge my colleagues to act quickly on her nomination," Carper added.

The acting OPM chief also won plaudits from the largest federal worker union.

J. David Cox, president of the American Federation of Government Employees, said Cobert "has done an admirable job as acting director."

He added, "She has answered questions about the data breach honestly, has taken steps to bring in-house the work associated with notifying affected employees, and seems to understand IT adequately enough to make sure that security measures are in place to minimize further breaches."

Cobert's confirmation process will lead to more questions on how the administration is dealing with the data breach -- a response that has left many underwhelmed on Capitol Hill and in federal agencies.

"I look forward to hearing the nominee's ideas for protecting Americans' private information, for contacting the millions affected by the attack that inexplicably have not yet heard from OPM, and ensuring that federal employees are not subject to the threat of another massive hack of their private information," said Senate Majority Leader Mitch McConnell (R-Ky.).

In addition, Republicans are pushing for more accountability at OPM since the breach. In his statement, Chaffetz repeated his call that the personnel office should fire Donna Seymour, its chief information officer.

"It is of huge concern however, that despite suffering a massive data breach and not working in good faith with the OPM OIG [Office of the Inspector General], CIO Donna Seymour remains in her position. I strongly urge Ms. Cobert to immediately remove Ms. Seymour and replace her with a qualified CIO who will protect the critical information housed at OPM," Chaffetz said.

OPM, however, has defended Seymour in the past in response to Chaffetz (*Greenwire*, Aug. 6).

AIR POLLUTION:

EPA proposes changes to ozone 'exceptional event' regs

Sean Reilly, E&E reporter

Published: Wednesday, November 11, 2015

U.S. EPA has unveiled proposed changes to its "exceptional events" regulations, a tool the agency has said states could use to address high levels of background ozone.

The proposed rule posted online yesterday would revise existing regulations in ways that appear geared toward making it easier for states to prove that spikes in ozone levels were due to natural events, not local human activity. The proposed rule would, for example, drop one provision from the existing regulations requiring states to show a direct connection between a particular event and a subsequent violation or exceedance.

While green groups are still reviewing the proposal, "I can tell you there are concerns that this is, in effect, a deregulatory move made in response to lobbying by Western governors," Frank O'Donnell, president of Clean Air Watch, said in an email this morning. Environmental organizations "are certain to file negative comments," he added.

Attempts to reach several industry representatives last night and today -- a federal holiday -- were unsuccessful. The draft rule, which runs more than 200 pages and must still be published in the *Federal Register*, sets a Jan. 19 deadline for public comments. A Dec. 8 public hearing will be held in Phoenix.

While Congress gave EPA the authority to excuse spikes in ground-level ozone readings in a 2005 amendment to the Clear Air Act, the agency has since rarely used that power. Implementation of the follow-up 2007 rule has been a headache for both state air agencies applying for exemptions and the EPA regional offices charged with reviewing those filings.

"Because exceptional events are fact-specific and thus unique and varied, providing templates or general guidance was, and still is, challenging," the proposed rule says. Under the current definition, the exceptional events are one-time occurrences, caused by either natural forces or human activity, that affect air quality.

But the issue of background ozone -- defined as readings of the pollutant that are not attributable to local, human-related sources -- has drawn increasing attention in light of EPA's decision's last month to lower the ambient air quality standard for ground-level ozone from 75 parts per billion to 70 ppb. High-elevation sites in the West sometimes approach that threshold because of background ozone; in a recently released, NASA-led study, researchers found that about 48 ppb -- or 77 percent -- of total ozone in Northern California and Nevada stemmed from background sources.

At the 70 ppb level, "we have reached the point where some parts of the country would fail to meet the standard even if they were to eliminate all industrial activity within their borders," Jeff Holmstead, who served as EPA's air chief during President George W. Bush's administration, said in prepared testimony at a House Science, Space and Technology Committee hearing last month.

In unveiling the new ozone standard last month, EPA officials noted that they were updating the exceptional events rule "to simplify and expedite the process for air agency development and EPA review" of individual exemption applications.

To date, however, the agency has granted only one waiver for an exceedance traced to background ozone. In response to a claim from Wyoming, the agency last year agreed not to count as a violation a June 2012 day when two air monitors in the state's western reaches registered ozone readings of 76 and 77 ppb, respectively (*Greenwire*, Nov. 17, 2014).

But EPA has said it has been working to improve communications with states; under the proposed rule, the agency would also reduce the number of criteria states must address in seeking to prove an exceptional event.

Those criteria include demonstrating that the event was not reasonably preventable and stemmed from natural forces or "a human activity unlikely to recur at a particular location." Although the proposed rule would drop the current requirement that states show "there would have been no exceedance or violation but for the event," it would retain another requirement that states demonstrate "a clear causal relationship between the specific event and the monitored exceedance." If the practical distinction between the two mandates seems slight, states have voiced concern that EPA "has, in many cases, historically interpreted the 'but for' criterion as implying the need for a strict quantitative analysis … of the estimated air quality impact" from a particular event, according to the draft rule.

EPA is also proposing to revise its existing regulations to make clear that "a mix of natural emissions and reasonably controlled human-affected emissions sources may be considered a natural event," according to the proposal. It adds, however, that an exceedance triggered solely by "reasonably controlled" human emissions would not be considered a natural event.

FERC:

White House may wait months to fill GOP vacancy -- sources

Hannah Northey, E&E reporter

Published: Tuesday, November 10, 2015

This story was updated at 2:25 p.m. EST.

The White House may wait months to fill a vacant Republican seat on the powerful Federal Energy Regulatory Commission -- and then use that nomination as a bargaining chip when the time comes, according to sources.

The Obama administration has yet to tap a replacement for Philip Moeller, a member of the agency who stepped down at the end of last month to pursue opportunities in the private sector.

Moeller, whose term expired June 30, was with the agency nine years. The outspoken commissioner warned about effects of new environmental rules on the electric grid and the closure of coal plants. More recently, Moeller said FERC will have to tackle the issue of distributed generation in coming years (*EnergyWire*, Oct. 30).

Moeller's vacancy has left the agency with three Democrats -- Chairman Norman Bay and Commissioners Cheryl LaFleur and Colette Honorable -- and Commissioner Tony Clark as the lone Republican.

Although speculation was high in recent weeks that Moeller would be replaced by Patrick McCormick, senior counsel for the Senate Energy and Natural Resources Committee, his fate is now unclear.

Sen. Lisa Murkowski (R-Alaska), the chairwoman of the committee, which has jurisdiction over FERC, said McCormick is comfortable working for the panel. But Murkowski wouldn't comment on whether McCormick was still a contender for the FERC position.

"I'm certainty comfortable because he's an incredible asset on the Energy Committee," the senator said.

Murkowski hired McCormick, an energy market lawyer, as the panel's special counsel in 2011. He came to the committee from the regulated markets and energy infrastructure practice at Hunton & Williams LLP and worked as an attorney for FERC. McCormick is now chief counsel.

McCormick's role was of high interest when Murkowski expressed opposition to Ron Binz, a past President Obama nominee to the commission who later stepped back after facing furious backlash from the fossil industry and free-market groups. Hunton & Williams represented coal giant Peabody Energy Corp. when the company was involved in a controversial case before the Colorado Public Utilities Commission and Binz was its chairman (*E&E Daily*, May 13).

For now, Murkowski said the commission is moving ahead.

"Moeller was just a good, strong commissioner. FERC is proceeding ahead, they can still do their business, which I think is important," Murkowski said. "Obviously, do we want to see a full complement? Yes. Do we want to see a functioning FERC? Yes. But I haven't lost a lot of sleep thinking about what the White House is doing on that."

While one source speculated that the White House wouldn't nominate a new commissioner until after the 2016 presidential election, others said the administration would be more likely to make a move before a lame-duck session sets in and makes any confirmation more difficult.

GOP strategist Mike McKenna said there's no "burning need" for the White House to fill the vacancy given that the agency is running smoothly and isn't seeing any split votes among the commissioners. But the administration, he added, may be keen on using the FERC nomination to secure passage for a Democratic appointee to another post whose confirmation has been stalled -- possibly a judicial nominee or an acting agency official.

"If it's going to happen, I think it'll happen during the first six months of [2016]. And I've got to believe it's going to happen because it's a nice trade."

McKenna also rejected the notion that McCormick is out of the running.

"I think that Pat is still very much a possibility," he said. "He's the best-qualified guy sitting out there."

OIL AND GAS:

Federal leases next big target for activists who fought KXL

Amanda Reilly, E&E reporter

Published: Tuesday, November 10, 2015

Article updated at 3:18 p.m.

With President Obama's rejection of the Keystone XL pipeline, climate activists who fought the project are turning their sights on a new movement to restrict fossil fuel extraction on federal lands.

The movement -- branded "Keep It in the Ground" -- took its first big steps last week as Sens. Jeff Merkley (D-Ore.) and Bernie Sanders (I-Vt.) introduced legislation to ban drilling on public lands. Now, activists are turning their attention to upcoming oil and gas lease sales in the West, threatening protests.

Former Secretary of State and Democratic presidential front-runner Hillary Clinton yesterday also assumed the nascent movement's language in a speech about climate change to the League of Conservation Voters.

"I would put the Arctic off-limits to drilling because I believe there are some places where we need to keep fossil fuels in the ground or under the ocean," Clinton said at the speech in New Hampshire as she accepted LCV's endorsement.

350.org co-founder Bill McKibben and other activists last week announced that they hoped to harness the energy from the movements against the Keystone pipeline and drilling in the Arctic to the "Keep It in the Ground" push.

The movement is calling for an end to new leases and the renewal of nonproducing leases for fossil fuels on public lands, as well as an end to leasing activities for offshore drilling. Supporters say the action is necessary to reduce the oil, gas and coal sectors' carbon dioxide emissions (*E&E Daily*, Nov. 4).

"We are taking on the Koch brothers and some of the most powerful political forces in the world who are more concerned with short-term profits than the future of the planet," Sanders said last week at an event on the U.S. Capitol grounds, surrounded by activists with signs linking climate change to fossil fuels.

While the movement is getting new life after Friday's Keystone decision, environmental organizations have previously raised questions about whether leasing public lands for coal mining runs contrary to climate change goals.

Democratic lawmakers and environmental groups have pressured the Department of the Interior's Bureau of Land Management to update its leasing program to add more accounting of climate impacts and ensure coal companies are paying a fair share for coal leases.

Environmental groups yesterday said they plan to protest upcoming BLM oil and gas leasing sales, including one scheduled for Thursday in Lakewood, Colo.

Yesterday, 11 environmental organizations, including Keystone opposition leader 350.org, pressed President Obama to cancel the Nov. 12 lease sale altogether, citing climate impacts.

"This lease sale, as do all new federal fossil fuel leases, continues a dangerous disconnect between your administration's climate goals and its 'all of the above' energy policy," the groups wrote. "Federal leasing of publicly owned fossil fuels contributes significantly to U.S. and global greenhouse gas emissions."

The environmental organizations said they were concerned that Interior has not quantified the cumulative greenhouse gas emissions stemming from past and new leasing, describing the agency as "flying in the dark amidst a dangerous and worsening climate."

Fossil fuels from public lands should be "deemed unburnable," the groups said.

"The disconnect between President Obama's climate policy and his energy policy couldn't be more stark," said Tim Ream, climate and energy campaign director at WildEarth Guardians. "Back in D.C., he talks a

good game on clean energy, but in Colorado, it's still drill, baby, drill."

BLM is required to hold quarterly oil and gas lease sales in each state with eligible public lands under the Mineral Leasing Act, though green groups argue that the secretary of Interior has discretion to stop new leases.

Industry organizations have called the new campaign a stunt, warning that ending drilling on public lands would cost the federal government a revenue stream worth billions of dollars.

The push to end drilling is "a political stunt by those who are spouting populist rhetoric for political points," American Petroleum Institute Executive Vice President Louis Finkel said. "They are not being honest with American voters."

CAMPAIGN 2016:

Steyer group airing more climate ads tied to GOP debate

Amanda Reilly, E&E reporter

Published: Tuesday, November 10, 2015

NextGen Climate Action today launched a new six-figure ad campaign that calls on presidential candidates to lay out plans to achieve at least 50 percent clean energy by 2030.

A television ad is timed to air on the Fox Business Network ahead of tonight's Republican presidential debate in Milwaukee on economic issues, while full-page print ads will run in the *Milwaukee Journal Sentinel* and the *Wisconsin State Journal*.

"It's not who we are. We don't ignore threats like climate change," the ad says. "We face our problems head on. With American-made clean energy we can end our dependence on foreign oil."

NextGen, the political action committee of billionaire climate activist Tom Steyer, has long called on candidates to show how they would boost renewable energy use in the country.

Steyer yesterday cast renewable energy as an economic opportunity for the United States, releasing a report that found achieving an 80 percent reduction in greenhouse gas emission levels through renewable energy could add 2 million jobs and nearly $300 billion to the nation's economy by 2050 (*E&ENews PM*, Nov. 9).

"If Republican candidates are serious about creating jobs, they must make clean energy central to their plans to grow our economy," Steyer today said in a statement. "We know we have the solutions to tackle climate change while creating millions of jobs and raising household incomes. So what are the Republican candidates waiting for?"

The main debate tonight will feature Republican candidates Donald Trump, Ben Carson, Marco Rubio, Ted Cruz, Jeb Bush, Carly Fiorina, John Kasich and Rand Paul. An earlier debate will feature Chris Christie, Mike Huckabee, Bobby Jindal and Rick Santorum.

Most Republican candidates have, up to now, avoided discussing climate change and renewable energy (*ClimateWire*, Oct. 29).

"We feel as if we have to have this conversation right now about what solutions we have for energy and

climate," Steyer said yesterday on a call with reporters.

Democrats, on the other hand, have attempted to outdo each other on the issue of climate change, and each say they would be best suited to pick up where President Obama leaves off with his climate agenda.

Democratic presidential candidate Hillary Clinton yesterday gave a 20-minute speech about climate change as she accepted an endorsement from the League of Conservation Voters Action Fund.

She called on Republicans to "join with" Democrats on climate change and specifically called out Cruz for his position.

Cruz has argued that scientists have not concluded that the climate is changing and has used the "global warming pause" as evidence that climate change is not occurring.

"In 2008 -- hardly ancient history -- the Republican Party platform had a long section about combating climate change. It supported wind and renewable energy," Clinton said. "And now we have candidates like Ted Cruz, who says climate change is not science."

BIOFUELS:

RFS promoters issue report card for presidential hopefuls

Tiffany Stecker, E&E reporter

Published: Tuesday, November 10, 2015

Democratic presidential candidates and a handful of Republicans received favorable marks on a midterm assessment of the White House contenders' views on the renewable fuel standard.

The top Democratic candidates -- former Secretary of State Hillary Clinton, former Maryland Gov. Martin O'Malley and Sen. Bernie Sanders (I-Vt.) -- were all graded as "good" on the midterm report from America's Renewable Future.

Six Republican candidates -- New Jersey Gov. Chris Christie, South Carolina Sen. Lindsey Graham, former Arkansas Gov. Mike Huckabee, former New York Gov. George Pataki, former Pennsylvania Sen. Rick Santorum and real estate mogul Donald Trump -- met the pro-RFS group's mark for approval.

Former Florida Gov. Jeb Bush, former Hewlett-Packard CEO Carly Fiorina and Ohio Gov. John Kasich received a "needs work" grade for "inconsistent answers" on their views on the biofuels policy, which mandates annual increases in biofuel production and blending in the country's fuel supply, ARF state director Eric Branstad said.

Receiving a "bad" grade in the GOP field were Texas Sen. Ted Cruz, neurosurgeon Ben Carson, Kentucky Sen. Rand Paul and Louisiana Gov. Bobby Jindal.

The report card is an interim assessment leading up to a final grade ahead of the Iowa caucus in February, Branstad said.

"At that point, it will be very clear who is supportive of the RFS and who is not," Branstad said on a call with reporters.

Branstad singled out Cruz for introducing legislation to repeal the RFS, and Carson for comments in the Republican debate last month in which he backed away from past support of using "oil subsidies" to expand the number of ethanol fueling pumps (*E&E Daily*, Oct. 29).

ARF has been trying to boost pressure on candidates to support the RFS by attending more than 900 events and signing up 45,000 backers.

"It has not been easy," ARF senior adviser Derek Eadon said. "We've been at every political event you can imagine."

Huckabee and Santorum were praised for visiting ethanol production facilities, and Trump was recognized for his plans to visit a facility this week.

Clinton and O'Malley have written op-eds in support of the mandate, Branstad said.

Activity on both sides of the RFS debate is increasing as U.S. EPA prepares to finalize the requirements for the program for 2014 through 2016, plus the biodiesel requirement for 2017.

ARF hopes to move the candidates in the "needs work" category up a grade before the Iowa caucus.

COAL:

Ky. group may pursue case against TVA

Manuel Quiñones, E&E reporter

Published: Tuesday, November 10, 2015

A federal appeals court is upholding the Tennessee Valley Authority's decision to burn less coal and more natural gas at its Paradise plant in coal-rich western Kentucky.

The Kentucky Coal Association sued TVA, accusing the federally backed utility of not properly following the National Environmental Policy Act in its decisionmaking.

Earlier this year, U.S. District Judge Joseph McKinley in Owensboro upheld TVA's decision, and late last month, a three-judge panel of the 6th U.S. Circuit Court of Appeals affirmed McKinley's ruling.

The judges wrote, "When the Tennessee Valley Authority decided to switch from coal to natural-gas generation at one of its power plants in Kentucky, many local landowners were not happy. They thought that the conversion would damage the local economy and harm the environment to boot."

But they added, "Any judicial power to halt such a project arises only if the TVA acted arbitrarily (and capriciously) in making its decision. Because that was not the case, any problems from the conversion are not ours to fix."

Bill Bissett, president of the coal association, said the group is considering its next steps. One option is to ask for a full court rehearing of the litigation.

In filing its litigation, the state's top pro-coal group was taking a page from environmentalists' playbook. They, too, have sued TVA over its fuel decisions, complaining about the utility's continued reliance on coal.

In recent weeks, Republican lawmakers from Kentucky urged TVA to back away from its natural gas conversion plan and told the utility to ignore U.S. EPA's new Mercury and Air Toxics Standards rule, which has led to the closure of dozens of coal generators (*E&ENews PM*, Oct. 7).

Even though the Supreme Court said EPA had not property analyzed the potential impacts of MATS, justices did not scrap the rule altogether. And TVA has said it must follow binding standards.

EMISSIONS:

Most G-20 members post CO2 declines -- study

Published: Tuesday, November 10, 2015

Greenhouse gas emissions are on the decline among the world's 20 major economies for the first time, a study found yesterday.

The report by a group of scientists and climate experts called Climate Transparency also found 15 of the Group of 20 members are showing strong growth in the renewable energy industry.

The nations together account for about 75 percent of the world's greenhouse gas emissions. The group is scheduled to meet in Turkey beginning Monday to discuss the issue.

"Climate action by the G20 has reached a turning point, with per capita emissions falling in 11 members, and renewable energy growing strongly," the group said.

Per-capita emissions declined from 2007 to 2012 in Australia, the United States, Canada, Japan, Germany, Britain, the European Union, South Africa, Italy, France and Mexico. Per-capita emissions are still rising in China and India, as well as Saudi Arabia, South Korea, Russia, Argentina, Turkey, Brazil and Indonesia, the study found.

The group said these nations needed to "urgently decarbonize their economies" for the world to limit average temperature increases to 2 degrees Celsius (3.6 degrees Fahrenheit) from preindustrial levels (Alister Doyle, Reuters, Nov. 10). **-- SP**

TRIBES:

Quinault Nation braces against climate change

Published: Tuesday, November 10, 2015

The rising Pacific Ocean is inundating the Quinault Indian Nation, and the salmon that still sustain many tribal members are fading, putting the reservation on Washington's Olympic Peninsula at the vanguard of climate change.

In 2014, waves breached the 2,000-foot sea wall protecting the seaside village of Taholah, destroying homes. The U.S. Army Corps of Engineers repaired the wall, but with seas continuing to rise, the tribe is trying to raise $60 million to move 700 homes, a courthouse and police station uphill.

The Anderson Glacier, which supplies cold water to the Quinault River, is disappearing. The situation makes things worse for salmon, which died in droves this summer in unusually warm rivers before they could spawn.

"When it comes to extreme measures taken to adapt to climate change, it does take an entire collaborative approach among agencies; it can't be done alone," said Quinault Tribal Council President Fawn Sharp, who is headed to the Paris climate negotiations to lend her voice to a rising number of leaders from indigenous groups, some of the people hardest hit by the effects of climate change.

The Quinault and Sharp have participated in international climate talks before, and considered signing the 1997 Kyoto Protocol as a sovereign nation and altering the tribe's timber harvest as a way to sell carbon credits to Europe.

While Sharp said she doesn't plan on signing any agreements this time, she will press the international community to protect indigenous peoples worldwide.

"If there are areas where a jurisdiction or an entire nation of people don't have the capacity or financial wherewithal to contend with the issue," she said, "then there is a responsibility in other parts of the world to provide that aid and assistance" (Ashley Ahearn, Oregon Public Broadcasting, Nov. 9). **-- DTB**

EFFICIENCY:

DOE partnering with cities and states on building data

Christa Marshall, E&E reporter

Published: Tuesday, November 10, 2015

The Department of Energy is launching a program with the National League of Cities, the National Association of State Energy Officials and other partners to help local jurisdictions boost energy efficiency in buildings and slash costs.

The SEED Collaborative utilizes open-source DOE software called the Standard Energy Efficiency Data (SEED) Platform, which aims to help cities and states over a three-year period manage a growing flood of energy data on buildings from sources including tax assessor records and audits. Some cities and states are using "a half- or a full-time employee" and spending thousands of dollars managing the data, which can contain errors, explained Elena Alschuler, building technologies project manager at DOE. That in turn can make it more difficult to implement and develop energy efficiency programs.

"Many jurisdictions don't even know how many buildings are in their city, much less how big they are or how old they are or how much energy they consume," Alschuler said. Additionally, cities and businesses often use different tracking tools, which can make it difficult to coordinate and implement policies, she said. The Natural Resources Defense Council and the Institute for Market Transformation are also collaborating on the program.

David Terry, a spokesman for the National Association of State Energy Officials, noted that more data is being applied to improve compliance with building codes, and bench-marking of building energy use in cities is being implemented across the country. "The effort to promote energy efficiency financing programs and state renewable energy programs is based on assessing costs and benefits," Terry said. "You can't assess the benefits unless you have data."

The software application -- which was developed with Lawrence Berkeley National Laboratory -- allows users to track and sort a wide range of building metrics, as well as create reports and graphs on energy consumption. Alschuler said it is designed to help officials look at multiple buildings at once to get a sense of trends, so they can determine things such as a link between building age and energy consumption or a need for, say, boiler upgrades in a given location.

"We want to move towards having a living record of every building so that changes in energy use are tracked over time in a standard format," Alschuler said. The department has allocated approximately $100,000 per partner annually for the program, although the participating cities and states won't be announced until next year. Participating jurisdictions pledge to hold monthly meetings, use the SEED platform and "share success stories and lessons learned," while DOE is offering ongoing technical assistance. Washington, D.C., and Philadelphia were among early adopters of the platform last year.

"The SEED Collaborative is an important step for cities and local governments so they can make smarter decisions," National League of Cities CEO and Executive Director Clarence Anthony said in a statement.

NATURAL GAS:

Space mining would be cheaper than LNG plant -- study

Published: Tuesday, November 10, 2015

Mining on the moon or an asteroid would be cheaper than building Earth's largest natural gas terminals, according to new research.

A mission to the dwarf planet Ceres, which lies 257 million miles from the sun and is the size of Texas, could cost around $27 billion. By comparison, Chevron Corp.'s Gorgon liquefied natural gas plant in Australia is expected to cost about $54 billion. Mining on the moon would cost about $9 billion, while taking parts of near-Earth asteroids could take just $492 million, according to estimates from graduate business students at the University of New South Wales in collaboration with NASA.

While investments could be economically feasible, they would need leaps of faith by investors.

"We shouldn't drink the Kool-Aid too hard," said Rene Fradet, deputy director of the engineering and science directorate at NASA's Jet Propulsion Laboratory in Pasadena, Calif. "Investors are out there, but they need to know what the risk and return will be," he said.

"It's not a profit-making venture yet," said Jeff Coulton, a senior lecturer at UNSW's School of Accounting. "It may well be a profit-making venture 20 to 30 to 50 years into the future" (David Stringer, Bloomberg/*Salt Lake Tribune*, Nov. 10). **-- BTP**

DOE:

Watchdog finds cybersecurity efforts lacking

Christa Marshall, E&E reporter

Published: Tuesday, November 10, 2015

The Department of Energy is falling short in protecting its data systems from cybersecurity threats, despite making progress in the last year, according to reports released this month by the DOE inspector general.

Citing a $3.7 million cybersecurity breach in 2013, the IG said a failure to implement security procedures in a more timely manner could expose the department to "increased risk of compromise." That earlier data breach compromised the names, Social Security numbers and personal data of more than 100,000

current and former department employees.

In an evaluation of the department's unclassified cybersecurity program, the IG said that more than 720 incidents were reported in fiscal 2015 related to security on DOE information systems, including the loss of equipment and "compromises to information systems."

Deficiencies include a department failure to report the full status of its cybersecurity program to the Department of Homeland Security by leaving out contractors, even though they constituted the majority of security incidents. In other cases, more than 1,300 computers didn't have antivirus updates, dozens of computer servers contained decade-old configurations, and individuals were granted access to information systems unnecessarily.

"The weaknesses occurred, in part, because the department had not ensured that policies and procedures were fully developed and/or implemented to meet all cybersecurity requirements," says the report, which is an annual IG review required by several laws, including 2014's Federal Information Security Modernization Act, which requires agencies to report on information security breaches. Investigators reviewed 22 locations, including the National Nuclear Security Administration.

Scott White, an associate clinical professor at Drexel University and a cybersecurity expert, said he was concerned that government agencies like DOE and the private sector generally are not spending enough time "creating a culture of security." Considering the sensitivity of data on government computers, there needs to be a focus on changing personal habits -- so employees, for example, are not inadvertently opening up computers to attack -- especially as more and more government data go online, he said.

In recent years, DOE has transitioned to a "cybersecurity risk management framework" to reduce threats on a more continuous basis through tools such as software to analyze systemwide risks. In the second audit, the IG found that officials had not always implemented security controls or monitored their effectiveness, however.

"Further, programs and sites had not ensured that authorizing officials responsible for accepting system risk were fully aware of the risks, weaknesses and vulnerabilities to the information systems under their purview," the audit states.

An information system at the NNSA, for example, was not categorized properly in terms of risk, "despite the severe impact to organizational operations that could occur." Other incidents included a four-year delay in assessing risks at the National Renewable Energy Laboratory.

The reports also praises DOE for addressing many issues in earlier audits.

The department concurred with most recommendations in both reports, which generally called for the department to develop and implement required cybersecurity procedures, as well as report metrics to the Department of Homeland Security.

However, the NNSA said it was not required to take further action on a recommendation to develop, implement and maintain a department program consistent with federal requirements, as it said the cited concerns already fell under existing policies.

The reports follow a string of earlier analyses, including one from the Government Accountability Office earlier this year stating that it was "crucial" that the federal government implement measures to reduce cyber-based threats.

AIR POLLUTION:

EPA dings NASA rocket launch site for violations

Sam Pearson, E&E reporter

Published: Tuesday, November 10, 2015

NASA's Wallops Flight Facility on Virginia's Eastern Shore will pay more than $50,000 to U.S. EPA after it was accused of violating air and hazardous waste laws at the coastal launch site.

The space agency launches rockets carrying small payloads and support systems for sub-orbital, low- and mid-Earth orbiting spacecraft from the facility adjacent to the Wallops Island National Wildlife Refuge.

EPA found NASA failed to verify the sulfur content of fuels used at the center in violation of its Clean Air Act permit.

EPA also cited NASA for violating the Resources Conservation and Recovery Act by failing to label and date hazardous waste containers, where it kept lead solder and alcohol rags. NASA also failed to adequately package and label discarded lamps that could contain mercury or other hazardous substances, EPA said.

The agencies agreed to a $50,660 settlement, EPA said today.

The settlement "reflects NASA's compliance efforts, and its cooperation with EPA in the resolution of this matter," EPA said.

In a statement, Wallops Flight Facility spokesman Jeremy Eggers said the violations "largely involved labeling issues on small containers identified during a July 2013 inspection."

The issues were corrected quickly, he said.

"It is a high priority to conduct our missions in a safe and environmentally friendly manner," Eggers said.

NASA did not admit or deny liability under the agreement, EPA said, but certified that it is now in compliance with the laws.

RAIL:

Northeast Corridor upgrades could boost environment -- report

Published: Tuesday, November 10, 2015

Modernizing the Northeast Corridor rail line would lead to lower energy usage and greenhouse gas production and more economic activity and mobility, a draft environmental report found.

The report released yesterday by the Federal Railroad Administration examined three choices for upgrading the rail line between now and 2040. The three choices were compared with an alternative of maintaining current service.

Simply leaving the rail line as is would cost about $20 billion over the next 25 years, while the most ambitious plan -- involving an underground rail tunnel from the Long Island coast to Connecticut -- would come in around $290 billion, FRA officials said.

Upgrading the line could increase ridership between 92 and 102 percent by 2040, the report found. Though construction would cause environmental disruption, that would be outweighed by the environmental benefits of increased train travel, the report said.

Federal officials expect to hold public hearings on the proposals beginning next month (David Porter, AP/*San Francisco Chronicle*, Nov. 10). **-- SP**

RAIL:

Canadian Pacific in talks to buy Norfolk Southern

Published: Tuesday, November 10, 2015

Canadian Pacific Railway Ltd. is mulling a takeover of U.S. railroad Norfolk Southern Corp., which could further consolidate the rail industry.

Canadian Pacific, the second-largest railway in Canada, is raising financing and has held early talks with Norfolk Southern, two officials said. The company attempted to acquire CSX Corp. last year, but negotiations did not progress.

"We would view a potential transaction positively," Desjardins Capital Markets analyst Benoit Poirier said, but the deal would face regulatory challenges, making it "unlikely that a transaction can be completed in the short term."

Norfolk Southern is valued at about $24 billion. The companies declined to comment (Hammond/McCracken, Bloomberg, Nov. 9). **-- SP**

Hi Bill, hi Jim,

Overall we got pretty good responses for our CY 2015 IUVP program, but it is always difficult to find cars over 90 K miles.

So here are 6 wavers in one document where we request to test cars with lower mileage.

We got responses for all test groups and have cars lined up for testing but they are under the 75% of full Useful life.

Maybe you can give me a heads up so we can proceed with our testing.

Thanks for your help and have a good weekend.

Subject: CD-15-27

Hi Dave;

I was looking over the guidance letter dated November 16, and noticed that the "Estimated Fuel Economy Range" for Minicompact Cars is now 15-34 MPG. This class of vehicle last year was 15-116 MPG. This looked a little suspicious to me, so I thought I would mention it and perhaps there was an error in this chart. All the other Carline Class values seem to be within a mile or two of last year's values.

Best regards,

Richard

Re: Notice of Clean Air Act Violations Pursuant to 42 U.S.C. § 7604(b)(1)(A)

Ladies and Gentlemen,

We represent Rich Hill, Elvis Foster, Robert Nesbitt, Joe Howbert, Callum Dorey, Don Cunningham, Angelyen Wood, Marcia Andru Moshe, Edmund Steppan, Mireya Perez, Kristen Van de Biezenbos, Ann Marie Stief, William Stief, Thomas C. Jorgensen, Kartik Pillutla, Kathryn Sue Vordenberg, Michael Brown, Carol Spindel, Jason Welch, Thomas Bassett, Joshua R. Geller, Michelle Geller, Fred M. Flores, Gary Butterwei, Terri Butterwei, Thomas Michael Carran, Michael Fuerstein, Grant Garcia, Howard Katz, Timothy P. Yerkes, Beth Glassman, Stephanie Waddoups, Mary Jones, Diego Alberto Diaz, Michael Santos, Mark Pomerantz, and Tiffany Ford, individually and on behalf of all others similarly situated (collectively, "Plaintiffs"), and write to provide notice of violations of the Clean Air Act ("CAA") by Volkswagen AG, Audi AG, Porsche AG, Volkswagen Group of America, Inc., and Porsche Cars North America, Inc., (collectively, "VW") to the Administrator of the EPA, to the States in which the violation occurs (in this case, all fifty States and the District of Columbia), and to the alleged violators of the CAA. This is notice is pursuant to 42 U.S.C. § 7604(b)(1)(A), and is made 60 days before Plaintiffs commence a civil action against VW to enforce the applicable emission standards or limitations and to recover civil penalties, costs of litigation (including reasonable attorney and expert witness fees), and all other relief that is proper in citizen suits under the CAA.

The allegations in this notice are based on the Notices of Violation issued by the United States Environmental Protection Agency ("EPA") on September 18, 2015 and November 2, 2015. As stated therein, the EPA has investigated and continues to investigate Volkswagen AG, Audi AG, Porsche AG, Volkswagen Group of America, Inc., and Porsche Cars North America, Inc., (collectively, "VW") for compliance with the CAA, 42 U.S.C. §§ 7401-7671q, and its implementing regulations. The EPA has determined that VW manufactured and installed defeat devices in certain model year 2009 through 2015 diesel light-duty vehicles equipped with 2.0 liter engines, and certain model year 2014 through 2016 diesel light-duty vehicles equipped with 3.0 liter engines. These defeat devices bypass, defeat, or render inoperative elements of the vehicles' emission control system that exist to comply with CAA emission standards. Therefore, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B). Additionally, the EPA has determined that, due to the existence of the defeat devices in these vehicles, these vehicles do not conform in all material respects to the vehicle specifications described in the applications for the certificates of conformity that

VW FOIA, EPA 06/20/2017 2017-FFP_036004

purportedly cover them. Therefore, VW also violated section 203(a)(l) of the CAA, 42 U.S.C. § 7522(a)(l), by selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing these vehicles, or for causing any of the foregoing acts.

Law Governing Alleged Violations

This notice arises under Part A of Title II of the CAA, 42 U.S.C. §§ 7521-7554, and the regulations promulgated thereunder. In creating the CAA, Congress found, in part, that "the increasing use of motor vehicles . . . has resulted in mounting dangers to the public health and welfare." CAA § 101(a)(2), 42 U.S.C. § 7401(a)(2). Congress' purpose in creating the CAA, in part, was "to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and the productive capacity of its population," and "to initiate and accelerate a national research and development program to achieve the prevention and control of air pollution." CAA § 101(b)(l)-(2), 42 U.S.C. § 740 l (b)(l)-(2). The CAA and the regulations promulgated thereunder aim to protect human health and the environment by reducing emissions of nitrogen oxides (NOx) and other pollutants from mobile sources of air pollution. Nitrogen oxides are a family of highly reactive gases that play a major role in the atmospheric reactions with volatile organic compounds (VOCs) that produce ozone (smog) on hot summer days. Breathing ozone can trigger a variety of health problems including chest pain, coughing, throat irritation, and congestion. Breathing ozone can also worsen bronchitis, emphysema, and asthma. Children are at greatest risk of experiencing negative health impacts from exposure to ozone.

The allegations here concern light-duty motor vehicles for which 40 C.F.R. Part 86 sets emission standards and test procedures and section 203 of the CAA, 42 U.S.C. § 7522, sets compliance provisions. Light-duty vehicles must satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. § 86.1811-04. The EPA administers a certification program to ensure that every vehicle introduced into United States commerce satisfies applicable emission standards. Under this program, the EPA issues certificates of conformity (COCs), and thereby approves the introduction of vehicles into United States commerce.

To obtain a COC, a light-duty vehicle manufacturer must submit a COC application to the EPA for each test group of vehicles that it intends to enter into United States commerce. 40 C.F.R. § 86.1843-01. The COC application must include, among other things, a list of all auxiliary emission control devices (AECDs) installed on the vehicles. 40 C.F.R. § 86.1844-0l(d)(11). An AECD is "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of

VW FOIA, EPA 06/20/2017 2017-FFP_036005

activating, modulating, delaying, or deactivating the operation of any part of the emission control system." 40 C.F.R. § 86.1803-01. The COC application must also include "a justification for each AECD, the parameters they sense and control, a detailed justification of each AECD that results in a reduction in effectiveness of the emission control system, and [a] rationale for why it is not a defeat device." 40 C.F.R. § 86.1844-01(d)(11).

A defeat device is an AECD that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered in normal vehicle operation and use, unless: (1) such conditions are substantially included in the Federal emission test procedure; (2) the need for the AECD is justified in terms of protecting the vehicle against damage or accident; (3) the AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only for emergency vehicles . . . ." 40 C.F.R. § 86.1803-01.

Motor vehicles equipped with defeat devices, such as those at issue here, cannot be certified. EPA, *Advisory Circular Number 24: Prohibition on use of Emission Control Defeat Device* (Dec. 11, 1972); *see also* 40 C.F.R. §§ 86-1809-01, 86-1809-10, 86-1809-12. Electronic control systems which may receive inputs from multiple sensors and control multiple actuators that affect the emission control systems performance are AECDs. EPA, *Advisory Circular Number 24-2: Prohibition of Emission Control Defeat Devices - Optional Objective Criteria* (Dec. 6, 1978). "Such elements of design could be control system logic (i.e., computer software), and/or calibrations, and/or hardware items." *Id.*

"Vehicles are covered by a certificate of conformity only if they are in all material respects as described in the manufacturer's application for certification . . . ." 40 C.F.R. § 86.1848-10(c)(6). Similarly, a COC issued by EPA, including those issued to VW, state expressly, "[t]his certificate covers only those new motor vehicles or vehicle engines which conform, in all material respects, to the design specifications" described in the application for that COC. *See also* 40 C.F.R. §§ 86.1844-01 (listing required content for COC applications), 86.1848-01(b) (authorizing the EPA to issue COCs on any terms that are necessary or appropriate to assure that new motor vehicles satisfy the requirements of the CAA and its regulations).

The CAA makes it a violation "for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should

VW FOIA, EPA 06/20/2017 2017-FFP_036006

know that such part or component is being offered for sale or installed for such use or put to such use."' CAA § 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B); 40 C.F.R. § 86. 1854-12(a)(3)(ii). Additionally, manufacturers are prohibited from selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing, any new motor vehicle unless that vehicle is covered by an EPA-issued COC. CAA § 203(a)(l), 42 U.S.C. § 7522(a)(l); 40 C.F.R. § 86.1854-1 2(a)(l). It is also a violation to cause any of the foregoing acts. CAA § 203(a), 42 U.S.C. § 7522(a); 40 C.F.R. § 86-1854-12(a).

2.0 Liter Diesel Engines

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. The EPA calls this the "switch." The "switch" senses whether the vehicle is being tested or not based on various inputs including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. These inputs precisely track the parameters of the federal test procedure used for emission testing for EPA certification purposes. During EPA emission testing, the vehicles' ECM ran software which produced compliant emission results under an ECM calibration that VW referred to as the "dyno calibration" (referring to the equipment used in emissions testing, called a dynamometer). At all other times during normal vehicle operation, the "switch", was activated and the vehicle ECM software ran a separate "road calibration" which reduced the effectiveness of the emission control system (specifically the selective catalytic reduction or the lean Ox trap). As a result, emissions of Ox increased by a factor of 10 to 40 times above the EPA compliant levels, depending on the type of drive cycle (e.g., city, highway).

The California Air Resources Board (CARB) and the EPA were alerted to emissions problems with these vehicles in May 2014 when the West Virginia University's (WVU) Center for Alternative Fuels, Engines & Emissions published results of a study commissioned by the International Council on Clean Transportation that found significantly higher in-use emissions from two light duty diesel vehicles (a 2012 Jetta and a 2013 Passat). Over the course of the year following the publication of the WVU study, VW continued to assert to CARB and the EPA that the increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions. VW issued a voluntary recall in December 2014 to address the issue. CARB, in coordination with the EPA, conducted follow up testing of these vehicles both in the laboratory and during normal road operation to confirm the efficacy of the recall. When the

VW FOIA, EPA 06/20/2017 2017-FFP_036007

testing showed only a limited benefit to the recall, CARB broadened the testing to pinpoint the exact technical nature of the vehicles' poor performance, and to investigate why the vehicles' on board diagnostic system was not detecting the increased emissions. None of the potential technical issues suggested by VW explained the higher test results consistently confirmed during CARB's testing. It became clear that CARB and the EPA would not approve certificates of conformity for VW's 2016 model year diesel vehicles until VW could adequately explain the anomalous emissions and ensure the agencies that the 20 16 model year vehicles would not have similar issues. Only then did VW admit it had designed and installed a defeat device in these vehicles in the form of a sophisticated software algorithm that detected when a vehicle was undergoing emissions testing.

VW knew or should have known that its "road calibration" and "switch" together bypass, defeat, or render inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track the parameters of the federal test procedure and cause emission control systems to underperform when the software determined that the vehicle was not undergoing the federal test procedure.

VW's "road calibration" and "switch" are AECDs that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(l) of the CAA, 42 U.S.C. § 7522(a)(l), each time it sold, offered for sale, introduced into commerce, de livered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the hundreds of thousands of new motor vehicles within these test groups. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the "switch" and " road calibration."

The vehicles are identified by the table below. All vehicles are equipped with 2.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen,

VW FOIA, EPA 06/20/2017 2017-FFP_036008

		Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGA V02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

3.0 Liter Diesel Engines

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of each vehicle that causes the vehicle to perform differently when the vehicle is being tested for compliance with EPA emission standards than in normal operation and use.

When this software determines the vehicle has begun the FTP 75 Federal emission test procedure, it directs the vehicle to employ a low NOx temperature conditioning mode. A status bit in the software indicates that a "temperature conditioning" mode is active. In this low NOx temperature conditioning mode, the vehicle operates under a number of emission control parameters, including injection timing, exhaust gas recirculation rate, and common rail fuel pressure in such a way that the parameters yield low engine-out NOx emissions and high exhaust temperatures. The high exhaust temperatures heat the selective catalytic reduction system ("catalyst") and improve the catalyst's ability to reduce tailpipe NOx emissions. In this low NOx temperature conditioning mode, the combination of low engine-out NOx and improved catalyst performance results in tailpipe NOx emissions that are below the applicable emissions standard.

VW FOIA, EPA 06/20/2017 2017-FFP_036009

However, the software employs a "timer" that coincides with the low NOx temperature conditioning mode. At exactly one second after the completion of the initial phases of the FTP 75 Federal emissions test procedure (1,370 seconds, which is when the vehicle would normally be turned off), this software directs the vehicle to cease low NOx temperature conditioning mode. The "temperature conditioning" status bit switches to zero, and a second status bit indicates the activation of "transition to normal mode." In this "normal mode," the emission control system is immediately less effective. Compared to the low NOx temperature conditioning mode, the vehicle employs a different injection timing, exhaust gas recirculation rate, and common rail fuel pressure. This yields higher levels of NOx from the engine and reduced exhaust temperatures.

In addition, when the vehicle starts under conditions that the software determines *are not* the beginning of the FTP 75 Federal emission test procedure, the vehicle does not use the low NOx temperature conditioning mode at all. Instead, the emission control parameters are set consistent with the "normal mode." In sum, as soon as the vehicle senses that it is not being tested, it uses "normal mode." In "normal mode," tailpipe emissions of NOx are up to 9 times the applicable NOx standard levels, depending on model type and type of drive cycle (e.g., city, highway).

This notice is based on vehicle emission testing performed by the EPA's National Vehicle and Fuel Emissions Laboratory, California Air Resources Board's Hagen-Smit Laboratory, and Environment Canada's River Road Laboratory. This testing was performed since EPA's announcement on September 25, 2015, that it would perform additional testing "using driving cycles and conditions that may reasonably be expected to be encountered in normal operation and use, for the purposes of investigating a potential defeat device." EPA, *EPA Conducted Confirmatory Testing* (Sept. 25, 2015).

VW knew or should have known that the software described above bypasses, defeats, or renders inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track federal test procedures and cause emission control systems to underperform when the software determined that the vehicle was not being tested.

VW's software described above includes one or more AECDs that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(1) of the CAA, 42 U.S.C. § 7522(a)(1), each

VW FOIA, EPA 06/20/2017 2017-FFP_036010

time it sold, offered for sale, introduced into commerce, delivered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the new motor vehicles within these test groups. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the software described above. The vehicles are identified by the table below. All vehicles are equipped with 3.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2014	EADXT03.02UG	VW Touareg
2015	FPRXT03.0CDD	Porsche Cayenne
2016	GVGAJ03.0NU4	Audi A6 Quattro, A 7 Quattro, A8, A8L, and Q5

Citizen Enforcement

The investigation into this matter is continuing. The above tables represent specific violations that the EPA and Plaintiffs believe, at this point, are sufficiently supported by evidence to warrant the allegations in this notice. The EPA and Plaintiffs may find additional violations as the investigation continues, including violations related to carbon dioxide emissions from diesel and gasoline-power VW vehicles, as indicated by VW's public announcement on November 3, 2015.

Not less than 60 days following this notice, Plaintiffs may commence a civil action pursuant to 42 U.S.C. §7604, which provides that the district courts of the United States have jurisdiction to enforce emission standards or limitations, to apply any appropriate civil penalties, and to award costs of litigation (including reasonable attorney and expert witness fees) to any party.

Sincerely,

Robert S. Safi

Re: Notice of Clean Air Act Violations Pursuant to 42 U.S.C. § 7604(b)(1)(A)

Ladies and Gentlemen,

We represent Rich Hill, Elvis Foster, Robert Nesbitt, Joe Howbert, Callum Dorey, Don Cunningham, Angelyen Wood, Marcia Andru Moshe, Edmund Steppan, Mireya Perez, Kristen Van de Biezenbos, Ann Marie Stief, William Stief, Thomas C. Jorgensen, Kartik Pillutla, Kathryn Sue Vordenberg, Michael Brown, Carol Spindel, Jason Welch, Thomas Bassett, Joshua R. Geller, Michelle Geller, Fred M. Flores, Gary Butterwei, Terri Butterwei, Thomas Michael Carran, Michael Fuerstein, Grant Garcia, Howard Katz, Timothy P. Yerkes, Beth Glassman, Stephanie Waddoups, Mary Jones, Diego Alberto Diaz, Michael Santos, Mark Pomerantz, and Tiffany Ford, individually and on behalf of all others similarly situated (collectively, "Plaintiffs"), and write to provide notice of violations of the Clean Air Act ("CAA") by Volkswagen AG, Audi AG, Porsche AG, Volkswagen Group of America, Inc., and Porsche Cars North America, Inc., (collectively, "VW") to the Administrator of the EPA, to the States in which the violation occurs (in this case, all fifty States and the District of Columbia), and to the alleged violators of the CAA. This is notice is pursuant to 42 U.S.C. § 7604(b)(1)(A), and is made 60 days before Plaintiffs commence a civil action against VW to enforce the applicable emission standards or limitations and to recover civil penalties, costs of litigation (including reasonable attorney and expert witness fees), and all other relief that is proper in citizen suits under the CAA.

The allegations in this notice are based on the Notices of Violation issued by the United States Environmental Protection Agency ("EPA") on September 18, 2015 and November 2, 2015. As stated therein, the EPA has investigated and continues to investigate Volkswagen AG, Audi AG, Porsche AG, Volkswagen Group of America, Inc., and Porsche Cars North America, Inc., (collectively, "VW") for compliance with the CAA, 42 U.S.C. §§ 7401-7671q, and its implementing regulations. The EPA has determined that VW manufactured and installed defeat devices in certain model year 2009 through 2015 diesel light-duty vehicles equipped with 2.0 liter engines, and certain model year 2014 through 2016 diesel light-duty vehicles equipped with 3.0 liter engines. These defeat devices bypass, defeat, or render inoperative elements of the vehicles' emission control system that exist to comply with CAA emission standards. Therefore, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B). Additionally, the EPA has determined that, due to the existence of the defeat devices in these vehicles, these vehicles do not conform in all material respects to the vehicle specifications described in the applications for the certificates of conformity that

VW FOIA, EPA 06/20/2017 2017-FFP_036021

purportedly cover them. Therefore, VW also violated section 203(a)(l) of the CAA, 42 U.S.C. § 7522(a)(l), by selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing these vehicles, or for causing any of the foregoing acts.

Law Governing Alleged Violations

This notice arises under Part A of Title II of the CAA, 42 U.S.C. §§ 7521-7554, and the regulations promulgated thereunder. In creating the CAA, Congress found, in part, that "the increasing use of motor vehicles . . . has resulted in mounting dangers to the public health and welfare." CAA § 101(a)(2), 42 U.S.C. § 7401(a)(2). Congress' purpose in creating the CAA, in part, was "to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and the productive capacity of its population," and "to initiate and accelerate a national research and development program to achieve the prevention and control of air pollution." CAA § 101(b)(l)-(2), 42 U.S.C. § 740 l (b)(l)-(2). The CAA and the regulations promulgated thereunder aim to protect human health and the environment by reducing emissions of nitrogen oxides (NOx) and other pollutants from mobile sources of air pollution. Nitrogen oxides are a family of highly reactive gases that play a major role in the atmospheric reactions with volatile organic compounds (VOCs) that produce ozone (smog) on hot summer days. Breathing ozone can trigger a variety of health problems including chest pain, coughing, throat irritation, and congestion. Breathing ozone can also worsen bronchitis, emphysema, and asthma. Children are at greatest risk of experiencing negative health impacts from exposure to ozone.

The allegations here concern light-duty motor vehicles for which 40 C.F.R. Part 86 sets emission standards and test procedures and section 203 of the CAA, 42 U.S.C. § 7522, sets compliance provisions. Light-duty vehicles must satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. § 86.1811-04. The EPA administers a certification program to ensure that every vehicle introduced into United States commerce satisfies applicable emission standards. Under this program, the EPA issues certificates of conformity (COCs), and thereby approves the introduction of vehicles into United States commerce.

To obtain a COC, a light-duty vehicle manufacturer must submit a COC application to the EPA for each test group of vehicles that it intends to enter into United States commerce. 40 C.F.R. § 86.1843-01. The COC application must include, among other things, a list of all auxiliary emission control devices (AECDs) installed on the vehicles. 40 C.F.R. § 86.1844-0l(d)(11). An AECD is "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of

VW FOIA, EPA 06/20/2017 2017-FFP_036022

activating, modulating, delaying, or deactivating the operation of any part of the emission control system." 40 C.F.R. § 86.1803-01. The COC application must also include "a justification for each AECD, the parameters they sense and control, a detailed justification of each AECD that results in a reduction in effectiveness of the emission control system, and [a] rationale for why it is not a defeat device." 40 C.F.R. § 86.1844-01(d)(11).

A defeat device is an AECD that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered in normal vehicle operation and use, unless: (1) such conditions are substantially included in the Federal emission test procedure; (2) the need for the AECD is justified in terms of protecting the vehicle against damage or accident; (3) the AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only for emergency vehicles . . . ." 40 C.F.R. § 86.1803-01.

Motor vehicles equipped with defeat devices, such as those at issue here, cannot be certified. EPA, *Advisory Circular Number 24: Prohibition on use of Emission Control Defeat Device* (Dec. 11, 1972); *see also* 40 C.F.R. §§ 86-1809-01, 86-1809-10, 86-1809-12. Electronic control systems which may receive inputs from multiple sensors and control multiple actuators that affect the emission control systems performance are AECDs. EPA, *Advisory Circular Number 24-2: Prohibition of Emission Control Defeat Devices - Optional Objective Criteria* (Dec. 6, 1978). "Such elements of design could be control system logic (i.e., computer software), and/or calibrations, and/or hardware items." *Id.*

"Vehicles are covered by a certificate of conformity only if they are in all material respects as described in the manufacturer's application for certification . . . ." 40 C.F.R. § 86.1848-10(c)(6). Similarly, a COC issued by EPA, including those issued to VW, state expressly, "[t]his certificate covers only those new motor vehicles or vehicle engines which conform, in all material respects, to the design specifications" described in the application for that COC. *See also* 40 C.F.R. §§ 86.1844-01 (listing required content for COC applications), 86.1848-01(b) (authorizing the EPA to issue COCs on any terms that are necessary or appropriate to assure that new motor vehicles satisfy the requirements of the CAA and its regulations).

The CAA makes it a violation "for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should

VW FOIA, EPA 06/20/2017 2017-FFP_036023

know that such part or component is being offered for sale or installed for such use or put to such use."' CAA § 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B); 40 C.F.R. § 86. 1854-12(a)(3)(ii). Additionally, manufacturers are prohibited from selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing, any new motor vehicle unless that vehicle is covered by an EPA-issued COC. CAA § 203(a)(l), 42 U.S.C. § 7522(a)(l); 40 C.F.R. § 86.1854-1 2(a)(l). It is also a violation to cause any of the foregoing acts. CAA § 203(a), 42 U.S.C. § 7522(a); 40 C.F.R. § 86-1854-12(a).

2.0 Liter Diesel Engines

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. The EPA calls this the "switch." The "switch" senses whether the vehicle is being tested or not based on various inputs including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. These inputs precisely track the parameters of the federal test procedure used for emission testing for EPA certification purposes. During EPA emission testing, the vehicles' ECM ran software which produced compliant emission results under an ECM calibration that VW referred to as the "dyno calibration" (referring to the equipment used in emissions testing, called a dynamometer). At all other times during normal vehicle operation, the "switch", was activated and the vehicle ECM software ran a separate "road calibration" which reduced the effectiveness of the emission control system (specifically the selective catalytic reduction or the lean Ox trap). As a result, emissions of Ox increased by a factor of 10 to 40 times above the EPA compliant levels, depending on the type of drive cycle (e.g., city, highway).

The California Air Resources Board (CARB) and the EPA were alerted to emissions problems with these vehicles in May 2014 when the West Virginia University's (WVU) Center for Alternative Fuels, Engines & Emissions published results of a study commissioned by the International Council on Clean Transportation that found significantly higher in-use emissions from two light duty diesel vehicles (a 2012 Jetta and a 2013 Passat). Over the course of the year following the publication of the WVU study, VW continued to assert to CARB and the EPA that the increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions. VW issued a voluntary recall in December 2014 to address the issue. CARB, in coordination with the EPA, conducted follow up testing of these vehicles both in the laboratory and during normal road operation to confirm the efficacy of the recall. When the

VW FOIA, EPA 06/20/2017 2017-FFP_036024

testing showed only a limited benefit to the recall, CARB broadened the testing to pinpoint the exact technical nature of the vehicles' poor performance, and to investigate why the vehicles' on board diagnostic system was not detecting the increased emissions. None of the potential technical issues suggested by VW explained the higher test results consistently confirmed during CARB's testing. It became clear that CARB and the EPA would not approve certificates of conformity for VW's 2016 model year diesel vehicles until VW could adequately explain the anomalous emissions and ensure the agencies that the 20 16 model year vehicles would not have similar issues. Only then did VW admit it had designed and installed a defeat device in these vehicles in the form of a sophisticated software algorithm that detected when a vehicle was undergoing emissions testing.

VW knew or should have known that its "road calibration" and "switch" together bypass, defeat, or render inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track the parameters of the federal test procedure and cause emission control systems to underperform when the software determined that the vehicle was not undergoing the federal test procedure.

VW's "road calibration" and "switch" are AECDs that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(l) of the CAA, 42 U.S.C. § 7522(a)(l), each time it sold, offered for sale, introduced into commerce, de livered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the hundreds of thousands of new motor vehicles within these test groups. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the "switch" and " road calibration."

The vehicles are identified by the table below. All vehicles are equipped with 2.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen,

VW FOIA, EPA 06/20/2017 2017-FFP_036025

		Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3

2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGA V02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

3.0 Liter Diesel Engines

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of each vehicle that causes the vehicle to perform differently when the vehicle is being tested for compliance with EPA emission standards than in normal operation and use.

When this software determines the vehicle has begun the FTP 75 Federal emission test procedure, it directs the vehicle to employ a low NOx temperature conditioning mode. A status bit in the software indicates that a "temperature conditioning" mode is active. In this low NOx temperature conditioning mode, the vehicle operates under a number of emission control parameters, including injection timing, exhaust gas recirculation rate, and common rail fuel pressure in such a way that the parameters yield low engine-out NOx emissions and high exhaust temperatures. The high exhaust temperatures heat the selective catalytic reduction system ("catalyst") and improve the catalyst's ability to reduce tailpipe NOx emissions. In this low NOx temperature conditioning mode, the combination of low engine-out NOx and improved catalyst performance results in tailpipe NOx emissions that are below the applicable emissions standard.

VW FOIA, EPA 06/20/2017 2017-FFP_036026

However, the software employs a "timer" that coincides with the low NOx temperature conditioning mode. At exactly one second after the completion of the initial phases of the FTP 75 Federal emissions test procedure (1,370 seconds, which is when the vehicle would normally be turned off), this software directs the vehicle to cease low NOx temperature conditioning mode. The "temperature conditioning" status bit switches to zero, and a second status bit indicates the activation of "transition to normal mode." In this "normal mode," the emission control system is immediately less effective. Compared to the low NOx temperature conditioning mode, the vehicle employs a different injection timing, exhaust gas recirculation rate, and common rail fuel pressure. This yields higher levels of NOx from the engine and reduced exhaust temperatures.

In addition, when the vehicle starts under conditions that the software determines *are not* the beginning of the FTP 75 Federal emission test procedure, the vehicle does not use the low NOx temperature conditioning mode at all. Instead, the emission control parameters are set consistent with the "normal mode." In sum, as soon as the vehicle senses that it is not being tested, it uses "normal mode." In "normal mode," tailpipe emissions of NOx are up to 9 times the applicable NOx standard levels, depending on model type and type of drive cycle (e.g., city, highway).

This notice is based on vehicle emission testing performed by the EPA's National Vehicle and Fuel Emissions Laboratory, California Air Resources Board's Hagen-Smit Laboratory, and Environment Canada's River Road Laboratory. This testing was performed since EPA's announcement on September 25, 2015, that it would perform additional testing "using driving cycles and conditions that may reasonably be expected to be encountered in normal operation and use, for the purposes of investigating a potential defeat device." EPA, *EPA Conducted Confirmatory Testing* (Sept. 25, 2015).

VW knew or should have known that the software described above bypasses, defeats, or renders inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track federal test procedures and cause emission control systems to underperform when the software determined that the vehicle was not being tested.

VW's software described above includes one or more AECDs that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(1) of the CAA, 42 U.S.C. § 7522(a)(1), each

VW FOIA, EPA 06/20/2017 2017-FFP_036027

time it sold, offered for sale, introduced into commerce, delivered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the new motor vehicles within these test groups. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the software described above. The vehicles are identified by the table below. All vehicles are equipped with 3.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2014	EADXT03.02UG	VW Touareg
2015	FPRXT03.0CDD	Porsche Cayenne
2016	GVGAJ03.0NU4	Audi A6 Quattro, A 7 Quattro, A8, A8L, and Q5

Citizen Enforcement

The investigation into this matter is continuing. The above tables represent specific violations that the EPA and Plaintiffs believe, at this point, are sufficiently supported by evidence to warrant the allegations in this notice. The EPA and Plaintiffs may find additional violations as the investigation continues, including violations related to carbon dioxide emissions from diesel and gasoline-power VW vehicles, as indicated by VW's public announcement on November 3, 2015.

Not less than 60 days following this notice, Plaintiffs may commence a civil action pursuant to 42 U.S.C. §7604, which provides that the district courts of the United States have jurisdiction to enforce emission standards or limitations, to apply any appropriate civil penalties, and to award costs of litigation (including reasonable attorney and expert witness fees) to any party.

Sincerely,

Robert S. Safi

TOP NEWS

The 10 Mightiest Environmental Practice Groups

Faced with ever more complex needs from clients seeking environmental counsel, 10 firms are meeting the challenge head-on with the deepest environmental teams in the U.S. Check back Thursday to see the full list of the 100 largest environmental practice groups.

EPA Beefs Up Cross-State Air Pollution Rule

The U.S. Environmental Protection Agency on Tuesday incorporated the 2008 national ozone standards into its recently-resurrected cross-state air pollution rule, requiring several upwind U.S. states to reduce nitrogen oxide emissions from power plants that travel to downwind states that currently aren't meeting those ozone standards.

Clean Power Plan Will Devastate Pa. Coal, Lawmakers Say

Pennsylvania lawmakers and coal industry representatives vowed to fight the Obama administration's Clean Power Plan during a joint public hearing Tuesday involving members of the House and Senate coal caucuses, saying the regulations could devastate the state's coal industry and economy.

Ex-Massey Energy CEO's Criminal Trial Goes To Jury

A federal jury on Tuesday began deliberating conspiracy charges against former West Virginia coal magnate Don Blankenship, who prosecutors said in closing arguments exerted unrelenting pressure on his Massey Energy workers to look past hazards and wring profits from the Upper Big Branch mine before an explosion killed 29 people.

EPA Threatens To Yank NC Permitting Authority

The U.S. Environmental Protection Agency has threatened to revoke North Carolina's ability to issue permits under the Clean Water Act and Clean Air Act over concerns that recent state administrative law judge and state court decisions limit citizen access to judicial review of environmental permits.

Prosecutor Misconduct In Calif. Wildfire Ignored, AGs Say

Five state attorneys general Monday urged the Ninth Circuit to reverse a California federal judge's refusal to unwind a $122.5 million settlement over a devastating wildfire, arguing he ignored plausible allegations of serious misconduct by federal prosecutors in pursuing the deal.

EQT Says Frack Fine Challenge Can't Wait For Enviro Board

The Pennsylvania Supreme Court should greenlight EQT's court challenge to a regulator's $1.2 million settlement offer over a fracking water spill, the gas developer argued Tuesday, saying clarifying the law underpinning the proposed fine should not have to wait for an administrative body's ruling.

POLICY & REGULATION

Senate Votes To Block Controversial EPA Clean Power Plan

The U.S. Senate on Tuesday passed a pair of resolutions intended to repeal U.S. Environmental Protection Agency carbon emissions rules, including its contentious Clean Power Plan, despite the White House threatening a veto.

APEC Nations Commit To Promoting Green Trade Growth

Asia-Pacific Economic Cooperation leaders committed on Tuesday to continue backing the massive Free Trade Area of the Asia-Pacific and prioritizing trade-enhancing measures that address environmental challenges, encourage sustainable food supply chains and improve and develop transportation infrastructure.

LITIGATION

NJ High Court To Review Dispute Over Oil Tank Leak At Inn

New Jersey's highest court will consider whether a state appellate court erred by dividing the cost of investigating and cleaning up an oil leak between the purchasers and one-time owners of an inn property, according to a Monday court filing.

NJ Justices Will Mull Givaudan Win In Policy Assignment Row

The New Jersey Supreme Court will consider whether Givaudan Fragrances Corp. received a valid assignment of rights under an affiliate's insurance policies and can pursue more than $500 million in pollution claims coverage from an army of insurers, according to an order Monday.

Monsanto Tells 9th Circ. GMO Law Backers Lack Standing

Monsanto again urged the Ninth Circuit on Monday to dismiss a bid by a citizens coalition trying to revive a Maui County, Hawaii, law restricting genetically modified crops for lack of standing, saying they have no legal stake in defending the law.

WATER

Wash. Judge Trims Tribe's $9M Claim In River Cleanup Suit

A Washington federal judge partially denied a tribe's $9.2 million claim for responding to pollutants that a Canadian mining company dumped into the Columbia River, ruling Monday that the tribe lacked enforcement authority and must prove during an upcoming trial if the majority of the costs were related to remedial actions.

Union Pacific Slams Asarco's Filing In Basin Cleanup Row

Union Pacific Railroad Co. on Monday slammed a recent motion by Asarco LLC in a dispute over environmental cleanup costs, saying Asarco had not put forward undisputed facts in its effort to defeat arguments that Union Pacific may use in the case.

BP, Shell Move For Win In Calif. Tainted Water Suit

BP and Shell have asked a New York federal judge to dismiss a yearslong dispute with a California water district that alleges the oil companies, along with a host of others, endangered Orange County's water supply through their use of a gasoline additive, saying there is no reason for delaying judgment.

Miami-Dade Board Delays Boat Show Enviro Permit Vote

Looking to make some headway on its controversial plans to host part of the 2016 Greater Miami International Boat Show on Virginia Key, the event's operator only got more uncertainty Tuesday as the Miami-Dade County Commission deferred decision on a critical environmental permit until next month.

Water Agency Can Challenge Tribal Tax Rule, 9th Circ. Told

A California water agency renewed its fight on Monday against a federal rule that bars state and local taxation and collection of fees from improvements such as hotels, restaurants and other nontribal facilities built on tribal lands, telling the Ninth Circuit that it can challenge the regulation.

ENFORCEMENT

Chemical Producer PQ Hit With $1.7M Pa. Air Pollution Fine

Carlyle Group-backed chemical producer PQ Corp. must pay $1.74 million for violating Pennsylvania air quality standards with excessive carbon monoxide and nitrogen oxides emissions from its Chester facility, state regulators announced Tuesday.

EXPERT ANALYSIS

Recent Trends In Environmental Nuisance Law

LAW FIRM

Akern

Alstor Hunt

Nuisance has increasingly become the "tort of choice" for plaintiffs in environmental and toxic tort litigation, but two federal jurisdiction doctrines — preemption and political question — remain potential roadblocks. And while such cases continue to be viable under state law, courts generally have refused to lower the bar for plaintiffs to prove injury and causation, and to certify classes based on nuisance, say attorneys at Gibson Dunn & Crutcher LLP.

LEGAL INDUSTRY

The 10 Mightiest Product Liability Practice Groups

The 10 law firms with the largest product liability practices in the country include midsize firms for which the practice is an essential part of their identity, as well as large firms adapting to handle the increasingly international nature of lawsuits and government investigations stemming from high-profile product defects and recalls. Check back Thursday to see the full list of the 100 largest product liability practice groups.

The 10 Mightiest Insurance Practice Groups

Ten law firms have staked out spots among the biggest insurance practice groups by cultivating deep benches of partners with expertise in insurance litigation, transactional and regulatory matters. Check back Thursday to see the full list of the 100 largest insurance practice groups.

The 10 Mightiest Bankruptcy Practice Groups

Ten firms have established themselves as go-to shops for clients in need of restructuring expertise by providing the deepest bench of bankruptcy partners, placing them among the ranks of the largest bankruptcy practice groups in the U.S. Check back Thursday to see the full list of the 100 largest bankruptcy practice groups.

The 10 Mightiest Real Estate Practice Groups

Amid a globe-spanning real estate deal boom, 10 firms boasting the largest number of real estate partners are primed to grab the industry's growing cross-border deal work. Check back Thursday to see the full list of the 100 largest real estate practice groups.

5 Things Law Firms Do That Waste Time

Time is money and a way of life for law firms, but efficiency — increasingly necessary in a highly competitive legal market — is hobbled by habits and activities with few concrete results beyond wasted time, experts say. Here, experts discuss how firms let time slip away and what to do about it.

Baker Donelson Ties Health Insurance To Billing Hours

Baker Donelson Bearman Caldwell & Berkowitz PC said staff attorneys, part-time attorneys, of counsels and senior counsels will have to work 30 hours or more per week in order to maintain eligibility for health care coverage in 2017, according to a Monday memo.

Sen. Reid Blames Republicans For Judicial Vacancies

Senate Minority Leader Harry Reid, D-Nev., on Tuesday blasted Republicans for delaying judicial nominee votes, saying they are leaving Americans in the lurch by refusing to confirm qualified judges such as Luis Felipe Restrepo for the Third Circuit and Mary Barzee Flores for the Southern District of Florida.

Calif. Gov. Taps MoFo, Arnold, Katten Partners For Bench

California Gov. Jerry Brown on Tuesday announced 25 new judicial appointees, including a commercial litigation and antitrust expert from Morrison & Foerster LLP, a product liability litigation and white collar defense specialist from Arnold & Porter LLP, and a banking and real estate pro from Katten Muchin Rosenman LLP.

Davis Polk Sheds $1.4M Recruiting Fee Appeal

A New York appeals court Tuesday agreed with a lower court that a legal consultant's suit against Davis Polk & Wardwell LLP for $1.4 million in attorney recruiting commissions belonged in Hong Kong.

Exhibit A — Winky Face: Emoticon Evidence Enters Courts

With so many emojis and emoticons being transmitted online and in text messages, it was inevitable that they would end up in communications used as evidence in court cases. But what do they mean? And when their meaning is in dispute, who should resolve the conflict — the court or the jury? These questions recently have arisen in a variety of civil and criminal cases, say Karen Henry and Jason Harrow of Davis Wright Tremaine LLP.

Revised CSAPR Echoes States' Push On 'Cost-Effective' Utility Air Controls

EPA's proposed update to its Cross-State Air Pollution Rule (CSAPR) utility emissions trading program echoes ideas floated by several states on upwind states' mandates for using existing air pollution controls, with the agency using a uniform "cost-effectiveness" threshold for the controls despite an appellate ruling faulting the approach.

Despite Veto Promise, Senate Backs Resolutions Rejecting EPA GHG Rules

The Republican-led Senate has moved forward with resolutions disapproving EPA's greenhouse gas (GHG) rules for new and existing power plants, demonstrating that a majority of the chamber is opposed to the rules in an effort to bolster support for Republicans in coal states and undercut the Obama administration's negotiating position in the looming United Nations climate talks in Paris.

EPA Floats CSAPR Air Trading Update To Help States Meet Ozone NAAQS

EPA is proposing to update its Cross-State Air Pollution Rule (CSAPR) power plant emissions trading program to force reductions of ozone-forming emissions in 23 states during the summer ozone season to

help states attain the agency's 2008 ozone air limit, but the rule does not address EPA's tighter ozone standard issued in October.

Manufacturers Seek To Return EPA's GHG Permit Program To High Court

A group of major manufacturers is asking the Supreme Court to again review long-running litigation over EPA's greenhouse gas permit rules, filing a petition that asks the justices to provide EPA direction on how to trigger GHG limits in stationary source permits -- though the effort is considered a long shot that seeks to re-litigate EPA's Clean Air Act authority to regulate the gases.

News Briefs

EPA's Critics Question Authority For SSM Air Rule

Power sector and other EPA critics are urging a federal appeals court to vacate the agency's rule forcing 36 states to scrap language in their emissions control plans that exempts some industrial emissions during startup, shutdown and malfunction (SSM) periods for Clean Air Act compliance purposes, saying the agency lacks authority to do so.

Hague Named As Permanent EPA Region 7 Chief

President Obama has named former acting Region 7 Administrator Mark Hague as the region's permanent top agency official, succeeding Karl Brooks in that position after Brooks moved to the agency's personnel office earlier this year.

COAL:

OECD agrees to phase out export financing

Lisa Friedman, E&E reporter

Published: Tuesday, November 17, 2015

Wealthy nations have struck a deal to phase out coal financing through export credit agencies, a U.S. source and several environmental activists monitoring the negotiations said.

Members of the Organisation for Economic Co-operation and Development (OECD) meeting in Paris agreed to restrict subsidies for exports of the least efficient coal-fired power generation, starting in 2017. The deal still allows certain types of coal financing for the biggest markets like India, Indonesia and South Africa.

The deal -- built largely around a compromise crafted by the United States and Japan -- carves out key exceptions for slightly more efficient plants at the insistence of South Korea and Australia, sources said. Despite those changes, environmental groups declared the deal a major achievement ahead of U.N. climate negotiations later this month.

"This is a win for international climate diplomacy," said Steve Herz, a senior attorney for the Sierra Club.

"The reason is, that a number of countries have already adopted restrictions on the subsidies they would provide to their exporters," Herz added. "What this does is add restrictions to the most regressive and the biggest remaining countries that had not adopted restrictions."

Under the agreement, all but the smallest plants using subcritical technology -- below 300 megawatts -- would be ineligible for financing.

Small and medium-sized plants, between 300 to 500 megawatts, would be eligible for the world's poorest countries as well as countries with less than 90 percent electrification rates.

Under the original language designed by the United States and Japan, only the world's poorest countries -- those eligible for International Development Association (IDA) funding through the World Bank -- would have been able to access coal financing. The change was made at the behest of Australia and South Korea, sources said.

The coal deal comes just two weeks before nations meet in Paris again to complete an international climate change agreement. That accord is expected to help keep emissions from reaching dangerous levels and possibly create a system under which countries regularly boost their targets for curbing greenhouse gas emissions.

OIL AND GAS:

BLM postpones Utah auction to 'accommodate' climate activists

Phil Taylor, E&E reporter

Published: Tuesday, November 17, 2015

The Bureau of Land Management late last night announced it is postponing today's scheduled oil and gas lease sale in Salt Lake City to appease activists who are fighting to keep those minerals in the ground.

BLM had planned to lease up to 37,580 acres scattered around the center of the Beehive State for future oil and gas development, but the agency said it needed more time to "better accommodate the high level of public interest in attending the sale."

It marks the first time that the "Keep it in the Ground" climate movement -- which seeks to end the sale of federally owned oil, gas and coal -- has disrupted a BLM lease auction.

BLM said it intends to reschedule the sale in the "near future."

"As a public agency, we understand the importance of transparency," said BLM spokeswoman Megan Crandall. "Given the large interest, we chose to postpone the sale and will be working to find the best way to accommodate the public and those who wish to attend and participate in the auction when it is held."

It was the third consecutive BLM lease sale to be confronted by climate protesters who believe the burning of federally owned fossil fuels will undermine the nation's efforts to reduce greenhouse gas emissions.

Roughly 50 people gathered last week outside BLM's Colorado headquarters in Lakewood to protest the agency's sale of 90,000 acres in the Pawnee National Grassland, according to the Western Energy Alliance.

BLM moved forward with that auction, selling 106 parcels covering 83,534 acres for $5 million.

Protesters also demonstrated outside a Nov. 3 lease sale in Wyoming.

Protesters carried banners and fake bidding paddles at this morning's climate rally outside BLM's office in downtown Salt Lake City. Photo courtesy of WildEarth Guardians.

Crandall said there was not enough room in BLM's downtown Salt Lake City auction room to accommodate members of the public who wanted to attend. The room is about 28 feet wide by 60 feet long and also has to accommodate up to 30 bidders and reporters, she said.

BLM planned to live-stream the auction, but many activists insisted on attending in person, she said.

The "Keep it in the Ground" campaign is backed by some major environmental groups including the Natural Resources Defense Council and is buoyed in Congress by legislation from Sen. Jeff Merkley (D-Ore.) that would end new leasing and renewals of nonproducing federal leases for oil, coal and gas.

The movement is riding the momentum of President Obama's recent rejection of the Keystone XL pipeline and Royal Dutch Shell PLC's decision to abandon oil exploration in the Arctic Ocean. It now seeks to stop BLM from leasing fossil fuels in the West and the Bureau of Ocean Energy Management from opening the Atlantic Ocean to offshore drilling.

In Salt Lake City this morning, roughly 40 activists displayed theatrical bidding paddles, held up photos of their grandkids and sang folk songs including John Prine's "Paradise," according to Tim Ream, an organizer from WildEarth Guardians who is based in San Francisco and attended this morning's protest. Organizing groups included WildEarth, the Center for Biological Diversity, Women's Congress for Future Generations, 350.org, the Rainforest Action Network and Elders Rising for Intergenerational Justice.

Ream said BLM informed him last week that some members of the public would be turned back from the auction room regardless of whether there was space. This morning's protest was led primarily by older activists who had no intention of disrupting the sale, he said.

"They wanted to touch the hearts of those who are selling and buying our public lands," he said. "They realized two years in prison is too high a price."

Ream was referring to the two-year prison sentence handed down in 2011 to activist Tim DeChristopher for his decision to pose as a bidder at a BLM lease sale in Utah in late 2008 and snatch up $1.8 million in leases with no intention of paying for them.

Vaughn Lovejoy of the group Elders Rising was among those who attended this morning's rally.

"We'd like to see if there's a way to inspire my generation ... to spend this piece of our life doing something for the future rather than hanging out on cruise ships or golf courses," he said.

Ream said activists will also stage protests at BLM's upcoming oil and gas lease sales in Reno, Nev., on Dec. 8 and in Washington, D.C., on Dec. 10. "We're going to keep on hitting every one of these lease sales," he said.

The American Petroleum Institute has criticized the movement and Merkley's legislation as a "political stunt," warning that halting federal sales of fossil fuels would hike energy costs and hurt the federal government's coffers.

The Mineral Leasing Act requires BLM to hold regular oil and gas auctions.

Kathleen Sgamma, vice president of government and public affairs at the Western Energy Alliance, whose members depend heavily on public lands leasing, said this morning that the Salt Lake City protesters are ignoring how increased production of natural gas has helped the nation transition away from coal that is more harmful to the climate when burned.

"Apparently, BLM is seeking a larger venue to accommodate the expected crowd of protesters whose goal is to disrupt the sale," she said. "These same professional protesters bragged that they were traveling to other lease sales to try to disrupt them, but they're on a fool's errand."

Sgamma noted that Interior Secretary Sally Jewell has rebuffed the "Keep it in the Ground" movement as unrealistic.

"There are millions of jobs around the country that are dependent on these industries, and you can't just cut it off overnight," Jewell said in September during a breakfast organized by *The Christian Science Monitor* (*Greenwire*, Sept. 15).

AIR POLLUTION:

EPA proposes updates to its cross-state rule

Sean Reilly, E&E reporter

Published: Tuesday, November 17, 2015

U.S. EPA today released proposed updates to its Cross-State Air Pollution Rule, intended to cut nitrogen oxides (NOx) emissions from power plants in 23 Eastern states that contribute to downwind ozone air quality problems.

By reducing ozone pollution, "this update will help protect the health and lives of millions of Americans," EPA Administrator Gina McCarthy said in a news release.

The almost 360-page proposal identifies cuts in NOx emissions that can be achieved using proven and cost-effective control technologies, according to the release. When combined with other regulations already on the books, the proposal would lead to an approximately 30 percent reduction in NOx emissions in 2017 in comparison with last year's level, acting EPA air chief Janet McCabe told reporters in a conference call, and provide up to $1.2 billion worth in annual benefits compared to an estimated $93 million price tag.

The cross-state rule was finalized four years ago. In the release, the agency said that proposed update addresses the July ruling by the U.S. Court of Appeals for the District of Columbia Circuit that sent back part of the rule to the agency but rejected arguments by states and other petitioners that EPA lacked the authority to put in place federal implementation plans for almost two dozen states. The proposal released today provides for that option if states don't develop their own plans.

In a statement, Clean Air Watch President Frank O'Donnell called the proposal "a step in the right direction," but one that would only help states meet a 2008 ambient ozone air standard of 75 parts per billion, not the newer standard of 70 ppb unveiled last month.

Doing anything less to help downwind states meet the new standard "will fail to adequately protect public health," O'Donnell said.

CLEAN POWER PLAN:

Senate launches debate on CRA effort to kill climate rule

Amanda Reilly, E&E reporter

Published: Tuesday, November 17, 2015

The Senate today began debate on a bid to use the Congressional Review Act to kill the Obama administration's carbon rules for power plants.

Senate Majority Leader Mitch McConnell (R-Ky.) moved to open debate this morning on a CRA joint resolution to eliminate the Clean Power Plan, U.S. EPA's program for reducing carbon dioxide emissions from existing power plants. By rule, there will be up to 10 hours of debate before the Senate votes on passage of the resolution, possibly later today.

"The Obama administration is putting facts and compassion to the side in order to advance their ideological agenda," McConnell said this morning.

Sens. Shelley Moore Capito (R-W.Va.) and Heidi Heitkamp (D-N.D.) sponsored S.J. Res. 24 to kill the Clean Power Plan, while McConnell and Sen. Joe Manchin (D-W.Va.) introduced a separate resolution, S.J. Res. 23, targeting EPA's rule to reduce carbon dioxide emissions from new and modified power plants.

Taken together, the two resolutions would strike down the central piece of President Obama's climate change agenda as the administration prepares to go to Paris at the end of the month to attend international climate negotiations. The White House today threatened to veto the Clean Power Plan resolution.

Sen. Ed Markey (D-Mass.), long a proponent of U.S. action to address climate change, called the floor debate on the resolutions this week "an historic debate."

"This is a showdown on the United States Senate floor over the clean energy future of our country," he said.

McConnell today said he expected both the House and Senate to approve the resolutions. In the Senate, CRA resolutions require a simple majority, or 51 votes, for passage. The resolution targeting the Clean Power Plan has 48 co-sponsors, while the resolution aimed at the new power plants has 47 co-sponsors.

The House Energy and Commerce Committee later this afternoon will also begin a markup of CRA resolutions targeting the carbon rules and is expected to send the measures to the House floor in a vote tomorrow. The full House, however, will likely not vote on the measures until after Thanksgiving.

Sen. Brian Schatz (D-Hawaii) today said there was "zero chance" of the resolutions being enacted into law, given that they would require a signature by the president.

"There is no way that the president is going to enact into law something that would overturn his signature environmental achievement," Schatz said.

In its veto threat, the White House said that the Clean Power Plan resolution would "undermine the public health protections of the Clean Air Act" and "stop critical U.S. efforts to reduce dangerous carbon pollution from power plants."

Congress has been successful only once at using the 1996 CRA to overturn an administrative rule. In 2001, newly elected President George W. Bush signed a CRA resolution overturning an Occupational Safety and Health Administration rule on ergonomic injuries in the workplace.

Not only would the resolutions on the Senate floor kill the Clean Power Plan and EPA's rule for new and modified power plants, but they would also prohibit the agency from promulgating any similar rules in the future.

As Congress today moved forward on the CRA resolutions, supporters and opponents of EPA's rules for power plants doubled down.

In a study released this morning, the National Mining Association warned that the Clean Power Plan would lead to a $214 billion increase in wholesale electricity prices by 2030 while achieving "meaningless" reductions in global greenhouse gas emissions.

The U.S. Chamber of Commerce today issued a key vote letter urging senators to vote in favor of both resolutions.

Green groups, on the other hand, today highlighted EPA's projections that the Clean Power Plan would result in 3,600 fewer premature deaths and 90,000 fewer asthma attacks in children. They urged states to make use of the flexibility built into the program to focus actions on minority and vulnerable populations.

Yesterday, 116 environmental organizations sent letters to every senator urging them to oppose the resolutions.

A group of Senate Democrats today slammed the measures as a waste of time meant to appease the coal industry. Congress has a more pressing legislative agenda that includes addressing the terrorist attacks in Paris and moving appropriations bills, Sen. Sheldon Whitehouse (D-R.I.) said.

"I think a very unfortunate choice has been made by the majority leader to do this," Whitehouse said. "There are very few people who support it, but the ones that do -- the tea party, the fossil fuel industry and

the Koch brothers -- are the ones who matter, obviously, the most."

Citing industry cost estimates, Capito today called the rule the most expensive EPA regulation ever on the U.S. power sector and said that it would affect a broader swath of the economy than just the coal sector. EPA, she said, is "attempting to regulate the entire energy grid."

"Congress should pass this resolution and place this issue squarely on the president's desk," Capito said.

Opponents' objective, Schatz said, was to "kick up enough dust" for the international community to wonder whether the U.S. commitment to address climate change at the upcoming negotiations in Paris is firm.

But Democrats said they were confident that President Obama would still be able to show the nation's commitment to climate change regardless of House or Senate passage of the resolutions ahead of or during the Paris talks.

"It'll be clear once they pass it -- if they have the ability to do so -- that the president will announce he's vetoing it. It'll be clear from whatever vote occurs on the Senate floor that the votes are there to sustain the president's veto," Markey predicted. "And so he [Obama] will be saying quite clearly that it is the law of the land in the United States of America."

OIL:

Gardner sees room for agreement on lifting crude ban

Daniel Bush, E&E reporter

Published: Tuesday, November 17, 2015

Republican Sen. Cory Gardner of Colorado said today that Congress should consider a deal on lifting the ban on crude oil exports in exchange for measures that boost renewable energy production.

Gardner, a member of the Energy and Natural Resources Committee, echoed several Democrats who have suggested in recent months that the party could potentially support lifting the export ban if congressional Republicans agree to extend tax credits for wind and solar power.

"I think that's a great opportunity and something we should look at," Gardner said at an energy forum in Washington, D.C.

Gardner pointed to comments made in July by Democratic Sen. Martin Heinrich of New Mexico and Maine independent Sen. Angus King, who said they would be open to lifting the decades-old ban if they're offered language to extend expiring tax incentives for clean power (*E&E Daily*, July 31).

"Before we make such a monumental shift in U.S. policy, I hope we can agree to extend our existing policy incentives for carbon-free energy sources," Heinrich said at the time.

Senate Minority Leader Harry Reid (D-Nev.) also said earlier this year that he sees a potential opening to strike a crude-for-renewables deal that would bring Democrats wary of lifting the crude ban on board (*Greenwire*, Aug. 25).

"If that's the way to get votes," then lawmakers should consider the compromise, said Gardner, who famously backed wind power in a campaign commercial last year in his successful challenge to former

Democratic Sen. Mark Udall of Colorado.

But Gardner also acknowledged the political pitfalls facing any potential deal.

The House passed a stand-alone bill last month that would lift the export ban, but the 261-159 vote fell short of the two-thirds majority needed to override a promised presidential veto.

The Senate Energy and Natural Resources Committee voted 12-10 in July to pass legislation that also included a provision lifting the ban, but that bill has yet to come to the floor.

Given the White House's opposition to a clean bill lifting the ban, Gardner said the best bet will likely be attaching a crude export provision to a must-pass omnibus spending bill that Congress is slated to take up next month.

If Congress doesn't act this year, Gardner added, lifting the export ban would be that much harder during the 2016 presidential election cycle. "I'd like to see it done this year. Next year becomes much more difficult," Gardner said.

Industry groups and energy analysts agreed.

"There's been a lot of progress on the Hill" in advancing the crude exports issue, said George David Banks, executive vice president of the American Council for Capital Formation, which backs lifting the ban. Still, Banks said, "if we don't do it now, we're definitely not going to be able to do it next year."

COAL:

EPA protests Murray's 'punitive' effort to depose McCarthy

Manuel Quiñones, E&E reporter

Published: Tuesday, November 17, 2015

U.S. EPA made its latest argument before a federal appeals court yesterday to keep Murray Energy Corp. attorneys from deposing Administrator Gina McCarthy in ongoing litigation.

Justice Department attorneys representing EPA have long complained about the scope of discovery in the case. "The discovery rules were not intended to be punitive," they wrote in a filing yesterday.

Last week, U.S. District Court Judge John Preston Bailey for the Northern District of West Virginia declined to block Murray's deposition of McCarthy (*Greenwire*, Nov. 13). The company accuses EPA of not accounting for the economic impacts of rules affecting the coal industry.

EPA attorneys are now asking the U.S. Court of Appeals for the 4th Circuit for relief. The agency says it's improper for the company to depose a senior government official.

"There is no reason to believe that Administrator McCarthy's deposition could provide essential information about the EPA's alleged noncompliance with Section 321(a) of the Clean Air Act," the administration's filing said.

And contrary to Bailey's reasoning, administration attorneys wrote, "an agency's noncompliance with a statutory obligation does not constitute 'a clear showing of misconduct or wrongdoing' that could justify deposing a Cabinet-rank officer."

Last week, Bailey said McCarthy's knowledge of the facts and potential wrongdoing left "no viable alternative to the deposition of the administrator."

But the administration yesterday said Bailey "failed to adequately explain why information that Murray seeks from Administrator McCarthy could not be obtained from another source."

Murray attorneys have said they've tried to accommodate McCarthy when it comes to time and location of the deposition. They are set to file a brief to the appeals court in the coming days.

Bailey put off the deposition until next month to give the 4th Circuit time to review the dispute. The appeals court has in the past denied EPA relief on discovery in the same case.

Other litigation

The Supreme Court's recent ruling that EPA did not properly account for the economic impacts of its Mercury and Air Toxic Standards is empowering agency critics.

Arch Coal Inc. pointed to the ruling in a filing last week in its years-old litigation against EPA's retroactive veto of the Spruce mountaintop-removal mine in West Virginia.

The company told a three-judge panel of the U.S. Court of Appeals for the District of Columbia Circuit that EPA's "cavalier disregard" of issues like the company's compliance history and development spending on a years-old permit was "arbitrary and capricious in the extreme."

EPA already won the first round in the litigation over the agency's power to scrap Army Corps of Engineers dredge-and-fill permits even years after they're issued. At issue now is the decision itself.

In their own brief last month, Justice Department attorneys said that the courts must defer to EPA's decision, and that its veto can stand legal scrutiny "solely on the basis" of agency findings on the mine's adverse impacts (*Greenwire*, Oct. 12).

BIOFUELS:

Biodiesel makers lobbying Hill to reinstate tax credit

Tiffany Stecker, E&E reporter

Published: Tuesday, November 17, 2015

Biodiesel makers are pushing members of Congress this week to reinstate an expired tax credit to produce the renewable fuel, a financial support whose absence has hurt the domestic industry, according to the National Biodiesel Board.

Nearly 100 industry representatives are meeting with lawmakers today to reinstate the biodiesel tax incentive as a domestic production credit rather than a subsidy for blending the plant-based fuel with conventional biodiesel.

"This is a common-sense reform that will appropriately focus the incentive on stimulating U.S. production and jobs while streamlining IRS administration of the credit," Anne Steckel, the National Biodiesel Board's vice president of federal affairs, said in a statement. "It makes a good policy better."

The production credit expired on Dec. 31 last year, the fourth time in six years that Congress did not renew the credit at the close of the year, according to the biodiesel board.

"Members of Congress should understand that in the business world, this kind of unpredictability makes planning for growth nearly impossible," said Harry Simpson, CEO of Crimson Renewable Energy LP, a Denver-based company that operates one of the largest biodiesel refineries on the West Coast in Bakersfield, Calif.

Sens. Chuck Grassley (R-Iowa) and Maria Cantwell (D-Wash.) introduced an amendment to the Senate tax extenders package in July that would convert the $1-a-gallon tax credit to companies that blend biodiesel and renewable diesel into a producer tax credit, as well as make imported biofuels ineligible for the credit. The move was opposed by petroleum trade groups and the Advanced Biofuels Association (*E&ENews PM*, Oct. 22).

Advanced Biofuels Association President Michael McAdams has said he opposes changing the blender's credit to a producer's credit because it could raise prices for end-users.

"The current blender's credit for biofuels creates a competitive market for biodiesel and renewable diesel, which benefits the American consumer," McAdams said last month.

LOBBYING:

Tesla adds to advocacy roster

Kevin Bogardus, E&E reporter

Published: Tuesday, November 17, 2015

Tesla Motors Inc. has again bolstered its K Street team, adding another outside lobby firm to its payroll.

Chambers, Conlon & Hartwell LLC is now lobbying for the electric vehicle manufacturer. On behalf of Tesla, the firm is specifically looking at EV registration fee issues as well as rules that would tie greenhouse gas emissions and fuel economy credits to safety features, according to lobbying disclosure records released by the Senate last week.

Those lobbying for Tesla at the firm are Jason Tai, a former chief of staff to Rep. Dan Lipinski (D-Ill.); Matt Ginsberg, once an aide to Rep. Jared Polis (D-Colo.) and then-Sen. Ken Salazar (D-Colo.); and Katie Kachel, a former aide to Sen. Barbara Mikulski (D-Md.).

The trio of lobbyists have been working for the company since Nov. 1, according to their lobbying registration.

Tesla has begun to increase its presence again in the influence industry. Earlier this year, it hired 38 North Solutions LLC, its first outside lobby shop in almost four years (*Greenwire*, Oct. 23).

RENEWABLE ENERGY:

EPA climate rule could boost solar, wind in Ariz. -- study

Scott Streater, E&E reporter

Published: Tuesday, November 17, 2015

A new study says Arizona could meet carbon-cutting goals in U.S. EPA's Clean Power Plan simply by developing the state's abundant and already available solar and wind power resources over the next 15 years.

What's more, the 46-page study, conducted by the Tucson, Ariz.-based Sonoran Institute and researchers with Arizona State University, reports there are at least 15 large-scale solar and wind projects with the capacity to produce 2,032 megawatts of electricity that are already in some stage of the federal or state permitting process.

Many of these projects, which in total could produce enough electricity to power 600,000 homes, would move quickly toward construction if Arizona's public utilities would sign power purchase agreements (PPAs) to buy the electricity produced by these solar and wind projects, the study says.

The study -- titled "Gliding Toward a Clean Energy Future: Arizona Responds to the EPA's Clean Power Plan" -- also analyzes a potential build-out scenario, identifying areas where solar and wind projects could be developed to produce another 2,300 MW of electricity.

"The report for the first time provides a detailed road map for developing the most promising renewable energy projects and locations across Arizona both for generating and transmitting power from solar and wind," said John Shepard, the Sonoran Institute's senior director of programs and one of the study's authors.

Most of the development would be focused in western Arizona, which is already a target of solar power developers "due to the quality of solar resources, the proximity to markets in Arizona and California, the existing and planned transmission capacity, and a diversity of lands suitable for large-scale renewable development," according to the study.

The study lists 15 large-scale solar and wind projects in the region that "have the potential to be 'shovel ready' within two years."

These projects, which "have either completed most of the necessary planning and permitting requirements or are sufficiently advanced in their planning and permitting," would have the capacity to displace 2.5 million metric tons of carbon dioxide, the chief greenhouse gas contributing to climate change, the study says.

The Clean Power Plan would require Arizona to cut its carbon emissions rate 34 percent below 2012 levels by 2030.

The listed projects include BP Wind Energy North America Inc.'s 500 MW Mohave County Wind Farm, NextEra Energy Resources' 300 MW Sonoran Solar Energy Project and SolarReserve's 100 MW Quartzsite Solar Energy Project.

The study says the 15 projects would have an estimated total capacity to produce 2,032 MW of electricity and could be put into operation in the next seven years, allowing the state to meet interim carbon reduction targets under the Clean Power Plan by 2022.

These projects plus those identified in the build-out scenario could produce 4,312 MW -- nearly enough to allow the state to meet its Clean Power Plan emission reduction requirements by 2030.

Arizona is among a coalition of 27 states that filed a lawsuit challenging the Clean Power Plan final rule.

But many of those states, including Arizona, are also working on required state plans detailing how they will comply with the rule (*ClimateWire*, Nov. 9).

Renewable energy potential gives Arizona an advantage in that there's little doubt its abundant solar and wind resources could help the state reduce its carbon emissions. The National Renewable Energy Laboratory rates southern and western Arizona as having some of the nation's best solar power potential.

But none of the 15 projects outlined in the latest study have power purchase agreements with utilities to buy the power they would produce. Without such agreements, the study says, "these projects are not likely to go forward," even though projects like Quartzsite Solar already have been approved by the Bureau of Land Management.

This could drive renewables developers to sell their power to other states like California, resulting in Arizona squandering an opportunity to comply with the rule, Shepard said.

That's what happened earlier this year, Shepard said, when Sempra U.S. Gas & Power LLC entered into a PPA with Southern California Edison to sell the electricity produced from a 100 MW expansion of its Mesquite Solar complex in Arlington, Ariz.

"That's exactly what we don't want to see happen," Shepard said. "It's all good in the sense that it's going to reduce overall greenhouse gas emissions, but I'd like to see Arizona take advantage of its solar resources to meet its clean power goals."

CPP a 'policy driver'

Arizona certainly has the available land to accommodate the renewable energy build-out scenario outlined in the study.

Indeed, the study notes the 121,144 acres of land managed by BLM and Arizona state trust lands "that meet the initial size and screening criteria applied in our parcel selection have a total capacity of 17,306 MW."

While the study notes that a small fraction of that would ever be developed, these sites include three federally designated solar energy zones and numerous other renewable energy development areas that BLM identified as having low resource conflicts.

The Clean Power Plan "is a potential new policy driver" that could push demand for renewable energy in the state. The study notes the rule's emissions guidelines for coal-fired power plants and natural gas combined-cycle units, and that one option to meet the goals in the rule "is for electricity generation facilities that exceed the emissions guidelines to come into compliance by acquiring emissions reduction credits from [renewable energy] resources in Arizona."

Certainly, members of the renewable energy industry appear to agree.

"As the Sonoran Institute's study underscores, the Clean Power Plan opens up new opportunities for us to invest further in the state," said Jason Du Terroil, senior business developer for Iberdrola Renewables and an adviser to the study

But Mahesh Morjaria, First Solar Inc.'s vice president of systems development, said any increase in renewables in the state is a reflection not only of the rule but also of "what is already occurring in the energy sector."

"Due to reduced costs, solar and wind generation have become increasingly competitive with other

energy sources, driving the growth of these carbon-free generation assets," Morjaria said.

CLIMATE:

EPA to enter pact on warming with Puerto Rico, Virgin Islands

Amanda Reilly, E&E reporter

Published: Tuesday, November 17, 2015

U.S. EPA and the governments of Puerto Rico and the U.S. Virgin Islands will sign an agreement later this week to address climate change impacts in the Caribbean.

EPA announced today that the government entities will sign the memorandum of understanding during a two-day conference that kicks off today at the Interamerican University of Puerto Rico Faculty of Law. The MOU will put into writing that the entities will "share expertise" when it comes to climate change in the Caribbean.

"Climate change is impacting the Caribbean in serious ways, and we can expect more impacts in the future," EPA Region 2 Administrator Judith Enck said in a statement. "This region is extremely vulnerable to sea level rise, extreme heat events, hurricanes, and drought."

Leaders of Puerto Rico and the Virgin Islands said they hoped the MOU and conference will result in greater awareness of climate change in the Caribbean and stronger collaborations with U.S. government agencies.

"We have before us a historic opportunity to show the world how our islands can cope and grow in adversity. At the end of the day, many of the challenges are the same: droughts, hurricanes and coastal erosion recognizes no borders," Puerto Rico Gov. Alejandro García Padilla said in a statement.

Dignitaries and scientists who work in the Caribbean islands and the United States will be at the two-day conference. Representatives from the National Oceanic and Atmospheric Administration, Department of the Interior and Forest Service will attend.

NOAA last year issued a strategy naming climate change as one of three priorities for the Caribbean region.

SOLAR:

White House initiative aims to broaden Americans' access

Christa Marshall, E&E reporter

Published: Tuesday, November 17, 2015

The White House today announced new partners in a federal initiative to broaden Americans' access to solar power -- particularly in low- and moderate-income neighborhoods -- with more than $500 million in pledged funds.

The program is part of President Obama's broader climate plan heading into the Paris climate negotiations. Last week, Energy Secretary Ernest Moniz said lower costs of key technologies like solar --

enabled by research and development -- would be a "central theme" from the United States at the U.N. climate conference (*E&ENews PM*, Nov. 13).

Specifically, the administration said today that the number of participants in the National Community Solar Partnership has nearly tripled since July, now totaling 68 businesses, organizations and universities. Those partners are pledging $545 million in 21 states to help bring solar to more than 20,000 households, according to the White House.

"Actions like the ones announced today, will help the U.S. transition to cleaner sources of energy faster and ensure the opportunity to access clean energy is available to those who need it most, putting the U.S. on a strong playing field to secure an ambitious climate agreement in Paris," the White House said in a statement.

Announced in July, the National Community Solar Partnership is a collaboration between the Department of Energy, the Department of Housing and Urban Development, the Department of Agriculture, U.S. EPA, solar companies, nonprofits, and state and local leaders that allows them to share ideas and tap existing federal and state resources for solar. It was formed in response to a 2012 guide on community solar from the National Renewable Energy Laboratory. The partnership is aimed at building up community solar projects -- with technical help from DOE and its national laboratories -- so that households and businesses can pool their resources and invest in shared solar systems, saving costs on energy bills.

A report from DOE last week found that various solar technologies grew exponentially in the United States over the past four years, even as costs plunged. However, the White House noted that about 50 percent of U.S. households and businesses "are renters or lack the capital and adequate roof space to install solar systems." Community solar -- with its emphasis on shared systems and pooled resources -- could bring solar "to historically underserved communities," it said.

The new partners range geographically from the Vermont Energy Investment Corp. -- which is committing to installing three or more systems in the state -- to San Francisco-based RE-volv, which is launching a crowdfunding platform to finance solar for nonprofits. Other partners include companies like the Clean Energy Collective -- which developed a program allowing investor-owned utilities to own and rate-base community arrays without outside subsidies -- and groups like the National League of Cities and the Solar Energy Industries Association.

"The fact that low- and medium-income households can participate in our nation's clean energy revolution, and lead the way in improving their communities, is a giant step in the right direction," said SEIA's President and CEO Rhone Resch.

The White House announcement came on the heels of a $22.7 million funding announcement yesterday from the Department of Energy that it would try to lower the cost of installed solar energy systems to 6 cents per kilowatt-hour by the end of the decade. The funding will go toward a range of solar technology projects, including a web-based application that calculates the solar potential of a building's roof and a "solar permit generator" that helps developers navigate a barrage of documents.

ENERGY EFFICIENCY:

Calif. may require use of LED bulbs

Published: Tuesday, November 17, 2015

California regulators are considering new standards that would establish light-emitting diodes as the go-to technology in the state and scrap some other lightbulbs that waste more energy.

The California Energy Commission says its proposed standards on LEDs and small-diameter directional lamps will save residents more than $4 billion in energy costs in the next 13 years and will reduce greenhouse gas emissions.

The proposal "is one of the easiest ways to save money and help California reach its energy goals," CEC Commissioner Andrew McAllister said.

Under state law, the commission is required to adopt standards to cut energy use in homes by 50 percent and businesses by 25 percent from 2007 levels by 2018.

The commission is scheduled to decide whether to adopt the new standards next month (Mark Glover, *Sacramento Bee*, Nov. 14). **-- SP**

FEDERAL AGENCIES:

Law enforcement steps up patrols after Paris attacks, video

Hannah Hess, E&E reporter

Published: Tuesday, November 17, 2015

After an alarming Islamic State group video warned Washington, D.C., could face a strike similar to the Friday attack on Paris, the presence of local law enforcement remains heightened across the city.

Federal employees may have noticed increased patrols by Metro Transit Police during this morning's commute, as the department increased K-9 sweeps and random explosives screening systemwide. But federal authorities did not report changes to their ongoing safeguards.

The Homeland Security Department and FBI "are closely monitoring events in Paris and elsewhere, and we are in contact with our counterparts in the region," a DHS official said, in response to an inquiry about the video.

"While we take all threats seriously, we do not have specific credible information of an attack on the U.S. homeland," the official said, emphasizing that the agency continues to work closely with local law enforcement partners to "identify and disrupt potential threats to the United States." DHS will adjust security measures, as necessary, the official said, "to protect the American people to meet a constantly evolving threat picture."

Asked about federal workplace security, the Office of Personnel Management referred questions to the Federal Protective Service, a division of DHS charged with protecting the nation's federal facilities.

"OPM works closely with federal and local law enforcement and emergency management agencies in the region and consults with and coordinates any necessary changes in the operating status of the federal government with these entities," said Sam Schumach, an OPM spokesman, in a statement to *Greenwire*.

Yesterday's video, released by the information bureau of the Islamic State group in Salah al-Din Province, Iraq, features three speakers who praise the perpetrators of the Paris attacks and vow that the group will continue to strike France, as well as elsewhere in Europe, according to a translation by the Middle East Media Research Institute.

A militant who identifies himself as Al-Ajkrar Al-Iraqi warns, "Then we swear that we will strike America at its heart -- in Washington," during the four-minute video.

The Capitol Police Board notified congressional staff that police have increased their visibility in a number of areas on Capitol Hill, according to multiple news reports. The message called for staffers to remain vigilant in reporting suspicious activity and use the complex's system of underground tunnels.

"The U.S. Capitol Police are monitoring events in Paris as well as getting real-time intelligence updates to maintain awareness of global events. Enhanced patrols throughout the Capitol Campus may be observed, conducted out of an abundance of caution," said Capt. Kimberly Schneider, a spokeswoman for the department, in an email. "There is currently no known threat to the Capitol Complex."

COAL:

Companies ditch Wyo. leases

Published: Tuesday, November 17, 2015

Coal companies have scrapped applications for federal leases containing nearly 2 billion tons of coal reserves this year as the industry's fortunes decline.

Peabody Energy Corp. and Arch Coal Inc. have both abandoned plans to win leases on two sites with nearly 1 billion tons of coal reserves each in Wyoming.

Over time, those choices could lead to a decline in coal production in Wyoming's Powder River Basin.

"It is going to be a different looking industry than when I started in 40-some years ago," coal industry consultant Robert Burnham said (Benjamin Storrow, *Casper* [Wyo.] *Star Tribune*, Nov. 17). **-- SP**

AVIATION:

Airlines vary widely in trans-Atlantic fuel economy -- report

Sean Reilly, E&E reporter

Published: Tuesday, November 17, 2015

The world's leading passenger airlines vary dramatically in fuel economy on trans-Atlantic flights, with a gap of more than 50 percent separating the best- and worst-performing carriers, a new study has concluded.

Of 20 carriers ranked, Norwegian Air Shuttle was the most fuel-efficient, followed by Airberlin, Germany's second-largest airline, and the Irish national carrier, Aer Lingus. The bottom tier featured Lufthansa, Scandinavian Airlines (SAS) and British Airways, according to the report by the International Council on Clean Transportation, a Washington, D.C.-based nonprofit group.

The first-of-a-kind assessment graded airlines' fuel economy on the basis of passenger kilometers traveled per liter of fuel on nonstop flights between Europe and the United States and Canada.

Most efficient airlines

A new report ranks the top 20 airlines on the fuel efficiency of their nonstop passenger flights linking Europe to the United States and Canada.

Rank	Airline
1	Norwegian Air Shuttle
2	Air Berlin
3	Aer Lingus
	Aeroflot
	Air Canada
4	Air France
	KLM
	Turkish Airlines
9	Delta Air Lines
	Icelandair
	Alitalia
11	American Airlines
	Iberia
14	United Airlines
	Swissair
15	US Airways
	Virgin Atlantic
18	Lufthansa
	Scandinavian Airlines
20	British Airways

Source: International Council on Clean Transportation.

By that yardstick, British Airways burned 51 percent more fuel than Norwegian Air Shuttle; for both SAS and Lufthansa, the comparable figure was 44 percent more. Those numbers have a direct bearing on aircraft greenhouse gas releases; a nonstop round-trip trans-Atlantic flight averaged about 1 ton of carbon dioxide emissions per passenger, equal to what a Toyota Prius would produce over a 22-mile daily work commute over a year, the report said.

"Clearly, some airlines are making more efforts than others to improve" fuel efficiency, the report said.

The performance of U.S.-based carriers was at best mediocre. Delta Air Lines was tied for ninth, with American Airlines, United Airlines and US Airways all further back. The council attributed the bulk of the differences to two factors: the aircraft models flown by individual carriers and their ratio of roomier business- and first-class seats to more compact economy seating.

Norwegian, for example, flies newer, cleaner-burning Boeing 787 Dreamliners, Dan Rutherford, a co-author of the report, who is the council's director for marine and aviation programs, said in an interview. British Airways, by contrast, relies on Boeing 747s that are about 20 years old, he said. Similarly, the report found that British Airways and Lufthansa were among the three airlines with the highest share of business- and first-class seats.

For the trans-Atlantic sector, Rutherford added, "market forces and fuel efficiency are not well-aligned."

In 2013, aircraft globally pumped about 700 million metric tons of carbon dioxide into the atmosphere, accounting for 2 to 3 percent of total man-made emissions, Rutherford said. The International Civil Aviation Organization is aiming to complete work on a fuel efficiency standard for new aircraft by early next year; Norwegian Air Shuttle's very high fuel efficiency "demonstrates the key role of technology" in reducing airlines' CO2 emissions, the report said.

In emailed statements, however, representatives for SAS and British Airways both questioned the findings.

"A better approach to the research would have been to look at airlines' global operations rather than segment one region," British Airways said in a statement, adding that the company is adding newer aircraft to its fleet and improved carbon efficiency by 10 percent between 2005 and 2014.

Because there are no available data for actual fuel consumption by airline and aircraft type, global averages have to be used, said Lars Andersen Resare, SAS's head of environment and corporate social responsibility. Resare also questioned whether the report adequately accounted for fuel consumption for freight-related services.

"All in all, I would say it's more complicated than first anticipated to compare airlines with the data available and without considering what kind of services that is provided in combination with the actual fuel consumption," he said.

Spokespersons for Lufthansa, Germany's largest carrier, did not reply to requests for comment.

In its report, the council acknowledged that there is no easy way for environmentally conscious consumers to choose less carbon-intensive flights and called for all carriers to report fuel consumption data, along the lines of what U.S. airlines already provide to the Department of Transportation.

ELECTRIC VEHICLES:

DOT becomes first agency to join DOE workplace charging push

Ariel Wittenberg, E&E reporter

Published: Tuesday, November 17, 2015

The Department of Transportation is joining the Department of Energy's effort to bring more electric vehicle charging stations to workplaces across the country.

DOT, the first federal agency to join the Workplace Charging Challenge, plans to install 500 charging stations at its buildings nationwide by 2025.

"As the first Federal partner, we're excited to be part of this national partnership with DOE and other major employers across the country to further cleaner transportation alternatives," Assistant Secretary for Administration and Chief Sustainability Officer Jeff Marootian said in a statement. "DOT plays a major role in coordinating clean transportation infrastructure in our country, and we are proud to lead the Federal Government by taking early steps to implement the President's initiative to increase plug-in electric vehicle workplace charging for our employees."

The Workplace Charging Challenge was launched by DOE in 2013 with the goal of increasing the number of employers offering charging stations tenfold in five years (*Greenwire*, April 4, 2013). Today, more than 240 U.S. employers have joined the challenge, committing to provide electric charging access to more than 1 million workers at hundreds of locations.

Participants in the challenge receive free technical guidance for expanding electric vehicle charging, which helps assess employee demand and determine how to buy and install charging stations.

INDIA:

Closure ordered for crematorium blamed for yellowing Taj Mahal

Published: Tuesday, November 17, 2015

India's Supreme Court ordered an end to wood-burning cremation next door to the Taj Mahal to protect the famed marble domes and minarets from air pollution.

The order comes after one Supreme Court judge grew concerned about smoke and ash from the mausoleum damaging the UNESCO World Heritage site, which attracts more than 3 million tourists a year.

For decades, 17th-century Mughal Emperor Shah Jahan's pearly memorial to his wife along the Yamuna River in Agra has been yellowing as India industrializes.

In response, India's government has closed factories and tried to supply steady electricity to nearby residents to discourage the use of diesel-operated generators and dried cow dung cakes.

Now, officials are urging Hindus to use electricity-powered crematoriums instead of traditional wood pyres.

With the court order, the state of Uttar Pradesh has 15 days to announce a plan for eliminating the wood-burning crematorium (AP/London *Guardian*, Nov. 17). **-- DTB**

CHINA:

Nation invests $15B in 2 nuclear plants in Argentina

Published: Tuesday, November 17, 2015

China will finance and build two nuclear power plants in Argentina in a $15 billion deal aiming to export its nuclear technology.

The deal, signed during this week's Group of 20 meetings in Turkey, will give Argentina a significant boost at a time when it has been frozen out of the global credit markets. Last month, China moved to invest in a new generation of British nuclear plants (*ClimateWire*, Oct. 26).

"The construction of two new nuclear power plants will ensure our energy supply in the future," said Argentine Minister of Economy Axel Kicillof (Anderlini/Rathbone, *Financial Times*, Nov. 17). **-- BTP**

Subject: CD-15-27

Hi Dave;

I was looking over the guidance letter dated November 16, and noticed that the "Estimated Fuel Economy Range" for Minicompact Cars is now 15-34 MPG. This class of vehicle last year was 15-116 MPG. This looked a little suspicious to me, so I thought I would mention it and perhaps there was an error in this chart. All the other Carline Class values seem to be within a mile or two of last year's values.

Best regards,

Richard

2016 Audi A3 Sportback e-tron ultra_case4_11 13.pdf

Richard,

I double checked the values on the two labels and they looked fine to me.

Subject: 2016 Audi A3 e-tron and A3 e-tron ultra FE Label Samples

Hi Dave;

Our IT department and NEPS have finally worked the bugs out of these first VWGoA PHEV fuel economy labels. Please see Monroney label samples for both the Audi A3 e-tron and A3 e-tron ultra carlines. Please let me know if you find anything that needs to be corrected.

Best regards,

Richard
